THE WISCONSIN FARMER

VOL. XLVI. NO. 1. THURSDAY, JANUARY 4 1917. WHOLE NO. 1823

Swine Week an Important Event.

WE HAVE so much to say about dairying and dairy cattle in Wisconsin that we sometimes forget that there are other very important divisions of live stock. Whether our agricultural experiment workers had this in mind when they decided upon Swine Week, at Madison, February 5th-10th, or not, we do not know, but their action directs our attention to a most important division of stock raising, and one which we believe is not given sufficient attention in this great state. While we have 2,250,000 hogs in Wisconsin, an average of about a dozen to the farm, and these hogs are worth $25,000,000 to $30,000,000, The Wisconsin Farmer believes the industry could easily be doubled, and that farmers would greatly profit by this increased live stock population. The old saying is that meat can be produced cheaper on a hog than on any other animal, still holds good, and when we consider the present prices of pork, in connection with the cheap production cost, the hog business looks very inviting, indeed.

THE HOG HAS THE CENTER OF THE STAGE THIS YEAR.

Associations interested in the various swine breeds will hold the center of the stage at Madison, Swine Week. Members of eleven national swine breeders' associations will attend the conferences of the week, which include meetings of twenty separate organizations. The swine breeders will be represented by the state meetings of Poland China, Duroc Jersey, Chester White, Berkshire and Hampshire associations. The latter association is to be formed during Swine Week. In addition to these swine meetings, which are to be given the most prominence this year, there will be meetings of the Wisconsin Live Stock Breeders' Association, and others as follows: Dairy—Holstein, Jersey, Guernsey, Ayrshire and Brown Swiss; Beef—Shorthorn, Hereford, Aberdeen Angus and Red Polled; Wisconsin Horse Breeders' Association and the Wisconsin Sheep Breeders' Association. Swine Week will not only include conferences, such as the Country Life Conference, the meetings of the Wisconsin Agricultural Experiment Association, etc., but it will be featured by exhibits and shows of special interest. There will be a swine-and-pork-products exhibit in the University live stock pavilion. In this exhibit all breed associations and several packing houses and other business concerns are lending a hand. By-products of the pork industry as well as a full-fledged meat market and a culinary department, setting forth tempting pork dishes, will add to the attractiveness of the display. Two sales of high-grade hogs will interest many hogmen of the state. These will be staged under the direction of J. D. Gant, of Delavan, secretary of the Wisconsin Duroc Jersey Association, and J. F. Diley, of Rush Lake, secretary of the Poland China Club.

CRITERION, A NOTED CLYDESDALE HORSE, WILL BE AT THE UNIVERSITY FARM THIS YEAR FOR BREEDING AND DEMONSTRATION PURPOSES.

The opening day, February 5th, will be devoted to a discussion of profitable beef production. Mr. Walter L. Houser, of Mondovi, Wisconsin, is to be chairman of the day, and the discussion will be supported by the various representatives of state beef associations. In the afternoon of the first day, the Wisconsin Sheep Breeders' Association will hold a special meeting, with Arthur Broughton, of Albany, president of the Wisconsin Live Stock Breeders' Association, in charge. Mr. Broughton was a conspicuous winner with his sheep at the recent International Live Stock Exposition in Chicago. W. C. Coffrey, of the Illinois Experiment Station, and "Uncle Dick" Stone, breeder and judge, of Stonington, Illinois, are slated to appear on the program.

The second day, Tuesday, February 6th, is to be known as "Pork Production Day," and Mr. James Dillon, of Mondovi, will preside. There will be seven speakers, including representatives of the State and National Swine Breeders' Club. Draft horse prospects of Wisconsin, under the direction of the Wisconsin Horse Breeders' Association, with W. K. Caldwell, of Morrisonville,

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

Questions and Answers.

Sawing Wood With a Ford Car.

Would you kindly advise me if by elevating one wheel of a Ford automobile and using it for power to saw wood, the gearing would have a tendency to cut out?

Answer.—This would be very hard on the differential gearing and would soon either break the gears or wear them out. If you wish to use your car for power let the rear wheels run on a jackshaft mounted under a platform, as recently illustrated in these columns.

Traction Engines on Roads.

A subscriber, Manning, Iowa.—Does the law of Iowa require the operator of a steam tractor or threshing machine to plank bridges or culverts on the public roads when crossing them?

Answer.—It does not. The law requiring this to be done ceased to have force or effect on the first day of November, 1910. The law as it now exists as to moving traction engines on the public roads, is as follows, viz: "Whenever any traction engine is being propelled upon the public road, the whistle thereof shall not be blown, and the operator thereof shall exercise reasonable care and caution in the management of the same, so as to avoid any accident that might occur from fright upon the part of any horse, or other draft or domestic animal. Any person operating a traction engine upon the public highway, shall, upon request or signal, by putting up the hand from the person riding or driving, a restive horse or other draft or domestic animal, bring such traction engine immediately to a stop, and if traveling in the opposite direction, remain stationary so long as may be reasonable, to allow such horse or animal to pass—and if traveling in the same direction, use reasonable caution while such horse or animal is passing, and the operator or any other person employed by the owner of said traction engine shall render necessary assistance to the party having in charge said horse or other draft or domestic animal in so passing."

The Leyden Jar.

Will you please tell how to make a Leyden jar battery and how to charge it? I have a generator. Where could I get a good one, and how much would it cost?

Answer.—The Leyden jar cannot be used as an ordinary storage battery. It is similar to the condenser used on a magneto and is used to store an electric charge of very small quantity and very high voltage. It is very easy to make. Obtain a half gallon glass fruit jar and coat it inside and outside about two-thirds of the way up, also the bottom, with tinfoil, pasting it on with flour paste. Make a wooden cover for it. The cover must be dry; it should be shellaced and dried in a warm place for several days. A brass rod about six inches long should then be driven through the wooden cover at the center. A chain attached to the bottom end of the rod is allowed to touch the bottom of the jar on the inside. A brass ball about an inch in diameter is usually placed on the upper end of the rod, to prevent leakage, as an electric charge leaks off a sharp point rapidly. The wooden cover is usually held in place by means of insulating tape. The jar is charged by connecting the ground wire of a jump spark coil to the outside lining, and the spark terminal to the brass rod, the coil being operated by batteries. The longer the spark produced by the coil the greater the charge that may be given the jar. A Tesla coil, operated by lighting current, is often used to charge the jars. Sometimes the jar receives too large a charge, and the electricity actually breaks a hole through the glass, ruining the jar. Care must be used in handling a charged jar, as a very serious shock may be received from it. It may be discharged by touching a wire to the outside lining and the brass rod at the same time, the wire being held by a long dry stick, or other insulator.

On account of its small capacity the Leyden jar is of little practical value, being used chiefly for experimental work with electricity. Condensers made of alternate layers of tinfoil and paraffined paper may be made with a comparatively large capacity in a small space, and are used on magnetos and in alternating current work.

Removing Boiler Scale.

I have a twenty-horse-power steam engine. The boiler is scaled up pretty badly. I have removed all the hand hole covers for the winter. What will be the best thing to do or to use when I fire up again next spring?

Answer.—The scale will air-slake during the winter so that a considerable amount can be scraped and washed out next spring before the hand holes are closed. When in use it may be necessary to clean the boiler twice a week if the water is very bad. If the water is very clear and free from mineral once in six weeks might be sufficient. To clean the boiler, allow the fire to die out and the steam pressure to drop below ten pounds. Then, keeping all the doors and drafts closed, open the blow-off cock and drain the boiler. Then remove the washout plugs or hand hole covers and wash out all the mud and as much scale as possible.

A Small Automobile.

Please publish an illustration showing how to make a twin-cylinder motorcycle engine pull a small automobile by worm drive. Also state how much power a new Harley-Davidson engine has. Would it have power enough to pull itself and two passengers up a fair-sized hill?

Answer.—We doubt that it would be practical for you to make an automobile with a worm drive. A worm drive presents some engineering problems that make it difficult for an experienced engineer to construct one successfully. There must be ball bearings to take the end thrust; the gear must be located exactly at the center of the worm; the tendency of the worm to heat must be guarded against, and the outfit is usually wasteful of power. Instead of a worm drive we are publishing an illustration of a disk drive for a light automobile. This same drive could be used successfully on gasoline farm engine trucks for moving the engine by its own power.

In place of the sprocket wheel, mount a smooth-faced disk D on the engine shaft. The disk must be balanced, and the speed of the rim of

the disk at the greatest engine speed should not exceed a mile a minute. For an engine making 2,000 R. P. M., this disk should be about ten inches diameter. The disk may be made of cast iron, steel or aluminum. The fiber friction wheel F is driven by the disk. This wheel should be about ten inches diameter. The friction surface should be about one and a half inches wide, and may be made from heavy pasteboard clamped between two metal flanges and trued up in a lathe. The groove in the hub of the wheel takes the fork of the speed-changing lever. As the wheel is shifted toward the center of the disk, the car slows down. When the wheel passes the center of the disk and is driven on the opposite side, the motion of the car is reversed. The wheel drives shaft S by means of a sliding key. The sprocket wheels should be proportioned so as to give the desired speed. The twin-cylinder Harley-Davidson motorcycle is rated at eleven horse power and, therefore, should have plenty of power to pull the car and two passengers up a fairly steep hill.

Whatever the Make or Type

Whatever the make or type of your automobile, tractor, gas engine, etc., you can get a set of Genuine McQuay-Norris Leak-Proof Piston Rings, of exact dimensions, *at once*. They increase power and lower operating expense.

Don't take chances with poorly designed and cheaply manufactured piston rings. They mean poor compression, excess carbon, undue motor wear, waste of fuel and oil. Demand and get the *Genuine*

McQUAY-NORRIS LEAK-PROOF PISTON RINGS

Each and every one accurately gauged to one-thousandths of an inch. Made in all sizes—also in all over-sizes—both widths and diameters.

All garage and repair men can give you immediate service on them. If you have any difficulty getting them, write us. We'll see you are supplied.

SEND FOR FREE BOOKLET

"To Have and to Hold Power"—the standard handbook on gas engine compression. Every farmer who runs an automobile, engine, tractor, etc., ought to have it.

La Crosse HAPPY FARMER Tractors

Model "A" 8-16 H.P. $585.00

Any farmer, owner or tenant can afford to buy one or more of these wonderful tractors. Low in first cost and upkeep too. Carries 88% of its entire weight on two drive wheels. 1,500 lbs. constant drawbar pull guaranteed. Strong, simple construction, durable, and does great work.

Write for Catalog

Model "B" is strictly a *Kerosene* burner. Has no equal for quality construction and high power at low price. *Hyatt Roller Bearings* throughout. Guaranteed drawbar pull 2,000 lbs., or three 14-inch plows under practically all soil conditions. Handles any belt work. Weighs only 3,700 lbs. A marvel of simplicity and only $695.00, f.o.b. factory. We have a distributor near you for prompt service. Write for catalog.

LA CROSSE TRACTOR CO.
Dept. 17, Minneapolis, Minn.

LIVE DEALER AGENTS WANTED

Model "B" 12-24 H.P. $695.00

A ROLLER FEED MILL

WILL GRIND A WAGON LOAD OF FEED FOR 10 CENTS.

THIS is the **Famous Howell Roller Mill** you have heard so much talk about. The new improved mill for the scientific grinding of grain. Old style Burr and Stone Mills are out of date. Thousands of them are being annually replaced by the Famous Howell Roller Mills. Grind twice as fast as the best burr mill made. Does not heat the feed. Grinds Graham and Rye flour as well as feed. Has big capacity. Requires little power. No burrs or stones to wear out. Guaranteed to last a life time. Made in 13 sizes suitable for any size engine. Save one-half your time, gasolene and money by using a Howell Roller Mill. Write for Catalog F-16. We will send it free, together with the **Famous Howell Roller Feed Mill Puzzle.**

R. R. HOWELL & CO., Manufacturers, Minneapolis, Minn.

PATENTS Watson E. Coleman, Patent Lawyer, Washington, D.C. Advice and books free. Rates reasonable. Highest references. Best services.

SELF-OILING WINDMILL With INCLOSED MOTOR

Keeping OUT DUST and RAIN—Keeping IN OIL

SPLASH OILING SYSTEM Constantly Flooding Every Bearing With Oil

OIL SUPPLY REPLENISHED ONLY ONCE A YEAR

DOUBLE GEARS—Each Carrying Half the Load

Every feature desirable in a windmill in the AUTO-OILED AERMOTOR

Write AERMOTOR CO. 2560 West 12th Street CHICAGO

Free Catalog in colors explains how you can save money on Farm Truck or Road Wagons, also steel or wood wheels to fit any running gear. Send for it today.

The Wisconsin Farmer

THURSDAY, JANUARY 4, 1917.

FAMILY CIRCLE TALKS BY THE PUBLISHER

AS THE NEW YEAR DAWNS.

AS WE stand on the threshold of this new year, my friends, I feel that we can well pause for a few moments to survey the results of the months that have slipped away beyond recall, like water over the mill-wheel, and to plan for the months to come. In the former we may find encouragement and instruction for the duties and opportunities ahead. Not unwisely did the ancients represent the god, Janus, for whom this first month was named, as a two-headed being, facing behind and before.

The past year has been a glorious one for us in Wisconsin. It has seen the Badger state go forward by leaps and bounds. Never were her farm products worth so much, her citizens more contented or her industries more prosperous. She has set an example of agricultural and industrial efficiency for other states to follow.

As usual, Wisconsin has led the nation in the value of her dairy products, surpassing the hundred-million-dollar mark, in the number of her dairy cows, exceeding that of any other state, and in the output of her creameries and cheese factories, comprising more than one-sixth the butter and one-half the cheese of the country.

But even without her dairying industry, Wisconsin would have been a great agricultural state in 1916, because of the wonderful diversification of her agriculture. Her crops of rye, cabbages, hay, potatoes, oats and barley would have put her well to the fore of agricultural states, while a score of other food products, such as peas, rivaling the French peas in quality, and her cranberries, would fill the cup of her farming prosperity full to overflowing.

When I think of these things it seems to me that the Creator must have saved His richest materials for making Wisconsin, and then have looked upon the work of His hands and found it good. It stands us well to stop and think of these things at times, in our busy, rushing, work-a-day world, that we may get a renewed sense of pride, as well as of obligation. I sometimes wonder if you and I really appreciate Wisconsin's greatness. Familiarity, while not breeding the proverbial contempt, (for none of us can ever have anything but pride in the Badger state) makes us forgetful or indifferent to her blessings and accomplishments.

When I turn from the past to the future I see an even brighter picture before me. I see a Wisconsin more prosperous, more efficient, more filled with ambition and determination to lead the world. I see her farms peopled with the best citizenship of the nation; her young men and women taking up the tasks of their fathers and mothers with renewed life and hope; her barns, granaries and silos filled to bursting; her dairies and factories with increased output; her northern empire coming into its own, with the woods cleared away, its broad acres dotted with splendid, happy homes, the little church in the valley and the schoolhouse on the hill, and the land under the same high state of intensive cultivation that the southern and central portions are. In a word, I see in the future the promise of everything that goes to make life worth while in a bigger and better Wisconsin.

And now for just a few words of a personal nature, such as might be inappropriate at other times, but which I feel I may indulge myself in with my readers at this holiday season, just as one shares confidences with the family circle seated around the fire of a winter's evening.

I like to think of the State of Wisconsin and The Wisconsin Farmer as having grown up together. They were twins at birth, in that stirring year, 1848, when the first dull rumbles of "the inevitable conflict" were just beginning to be heard, and they have gone forward, side by side, sharing the same struggles, trials and final success.

When I stop to realize that Wisconsin today has the largest percentage of farms operated by owners of any state in the nation (over 150,000 out of about 175,000 farms being so operated) I am proud to feel that The Wisconsin Farmer always has been a home paper, for all the family circle, and when I see the extent to which co-operative effort and farmer organization have been carried, it fills me with pleasure to feel that The Wisconsin Farmer has played a part in promoting such activities for the economic and social welfare of the farmers of this state.

And so, as I contemplate the glorious history which The Wisconsin Farmer has shared with its readers, as I rejoice in our mutual prosperity at the close of this year of grace, 1916, and look forward to the year 1917, with its bright prospects for Wisconsin farmers and Wisconsin institutions, I feel that my greatest ambition is to continue to do my part in the upbuilding of Wisconsin a little better, a little more helpfully, a little more efficiently, during the next twelve months than ever before, so that, when the year 1917 draws to its close, I may feel that I am a little more worthy to share with you the blessings which I am sure it will contain for all of us, if we work loyally, faithfully and harmoniously together.

FARM-LOAN BANKS LOCATED.

I AM able to announce this week the location of the twelve federal farm-loan banks and to give further particulars of the working of the plan to which so many farmers all over the country are looking for financial relief. I am glad to be able to report that four of the twelve banks are to be located here in the grai ,belt. This is eminently fitting, for, while in this field are less than one-fourth of all the farms in the United States, yet herein is produced more than one-half of all the corn, wheat, oats and other crops which, plus the value of live stock sold and slaughtered, reaches the immense annual total of over ten and one-half billion dollars. The four grain-belt cities selected are Omaha, Nebraska; St. Paul, Minnesota; Wichita, Kansas, and St. Louis, Missouri.

The Federal Farm Loan Board has divided the country into twelve districts, as provided by the law, making the divisions as follows:

District No. 1—Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, New York and New Jersey. Bank at Springfield, Mass.

District No. 2—Pennsylvania, Delaware, Maryland, Virginia, West Virginia and the District of Columbia. Bank at Baltimore, Md.

District No. 3—North Carolina, South Carolina, Georgia and Florida. Bank at Columbia, S. C.

District No. 4—Ohio, Indiana, Kentucky and Tennessee. Bank at Louisville, Ky.

District No. 5—Alabama, Mississippi and Louisiana. Bank at New Orleans, La.

District No. 6—Illinois, Missouri and Arkansas. Bank at St. Louis, Mo.

District No. 7—Michigan, Wisconsin, Minnesota and North Dakota. Bank at St. Paul, Minn.

District No. 8—Iowa, Nebraska, South Dakota and Wyoming. Bank at Omaha, Neb.

District No. 9—Oklahoma, Kansas, Colorado and New Mexico. Bank at Wichita, Kan.

District No. 10—Texas. Bank at Houston, Texas.

District No. 11—California, Nevada, Utah and Arizona. Bank at Berkeley, Calif.

District No. 12—Washington, Oregon, Montana and Idaho. Bank at Spokane, Wash.

Now that the districts have been decided upon and the banks located, the next step is to organize the twelve land banks, each one to have a capital stock of $750,000, or $9,000,000 altogether. The public is to be allowed a certain length of time to subscribe to the stock of these banks (thirty days, I believe) and if it does not respond quickly enough to take up all the stock in this time, the United States government will furnish the rest of the preliminary capital. Farm-loan bonds will then be issued, in denominations as low as $25, bearing probably 4 or 4½ per cent. These will be free from taxation and being in small denominations, bearing good interest and backed by the government, they should be splendid investments, snatched up by the public without delay. This will give working capital for the banks, so that they will not be handicapped by any temporary lack of funds at the beginning of operations. Inasmuch as each farm borrower must subscribe to stock in the bank to the amount of 5 per cent of his loan ($50 for each $1,000 borrowed) the funds will be constantly replenished and the banks will go ahead indefinitely, loaning their money over and over again, mortgages being deposited each time that new bonds, based on these mortgages, are issued.

I am in receipt of private advices which convince me that the system will be in working order by the first of March, when the majority of farm loans are made. The rate of interest is not yet announced definitely, but it cannot be over 6 per cent, and will probably be 5½ per cent to begin with, reductions to be made later on, as the law works out in due course of time.

I am advised that already inquiries have been made to the board indicating desired loans to an amount twenty times in excess of the total capital stock of the twelve banks, or $180,000,000 altogether. I am convinced, from the great number of letters which I have received, that the farmers of the grain belt are intensely interested in the new law and propose to give it a full and fair trial. This is right. The law was passed in the interests of the deserving farmer; it should have such an impartial tryout as will prove its worth and show what its defects are, so that these can be remedied or dispensed with promptly. In the meantime, as I come into possession of other facts, I shall pass them on to you, for I realize that your interest in this subject is great.

COMMON-SENSE HEALTH.

MAKING due allowance for the exaggeration which often characterizes the speech of those who are carried away by a single idea, there still remains much truth in what a noted health evangelist has been preaching the last few weeks. He has been talking to large audiences in Kansas City and has awakened people to the value of the old-fashioned notions of common-sense home treatment and self-denial.

I was quite interested in something this man said recently, directed especially to the farmer, and I am going to take the liberty to quote from him rather liberally. He had given a day's menu for the farmer, making "ground wheat with cream, poached eggs and hot cakes with butter" take prominent place. Then he added:

> The farmer should be the healthiest, best-looking man in the world. He should be straight, supple, strong and vigorous. Statistics and the most casual observation show us he isn't. The reason is that he violates all the rules of health. The basic principles of health are diet, exercise and mental influence. The farmer eats too much and eats the wrong kind of food. Just for example. You'll notice poached eggs on the menu. The farmer always eats his fried. That turns the white of the egg into the most indigestible hunk of solid albumen you could find. It's not only worthless, it's dangerous. You'll notice hot cakes with butter. The farmer—and nearly everyone else—uses sirup. That means fermentation in the stomach. Also, he makes the cakes of white flour or denatured corn meal. Let him have a hand mill and grind his own wheat or corn. That saves the elements the body needs, instead of wasting them. Then there's exercise. The farmer thinks he exercises because he works. He doesn't. Work hardens his muscles and uses up his energies, but it doesn't do what the right kind of exercise does —make the worker supple and keep him young. As for mental attitude, the farmer is all too apt to look on life as nothing but hard work. He needs more fun, more pleasure, more companionship.

I do not want you to dismiss this man's remarks with a smile of contempt or disbelief, for behind his levity and exaggeration there is much truth. Let us ignore the charge that the farmer's life is all work and no play and get down to some of the more important details.

Take that item of "ground wheat with cream" on the menu, to begin with. The Iowa State College of Agriculture has recently issued a special pamphlet dedicated to this laudable end: "More action and less talk to reduce the high cost of living." Prominent in this pamphlet is the story of a young farmer who grinds his own flour; and not only saves money thereby, but finds the health of all his family better as a result. Bread being the old, reliable standby on his table, three times a day, this young farmer reduced his household expenses by returning to the practice of his forefathers and grinding his own flour. He simply hitches his gasoline engine to his feed grinder and the trick is turned. Let me give his experience, in his own words:

> I have winter wheat and a gasoline engine and a feed grinder. Two years ago I ground some wheat as fine as my mill would grind it and used it to make bread. We all liked the change from white to whole-wheat bread and each year since I have ground enough for our family use. The wheat I grind is run through the fanning mill three or four times, polished by being placed in a barrel churn, then fanned again, when it is ready to be ground. We find this flour very satisfactory for bread making. The bread is not as light as if made with white flour, but it is much more nutritious. It is also cheaper, since sixty pounds of wheat make sixty pounds of flour, at a cost of $1.70, while forty-eight pounds of white flour cost us $3. Moreover, the whole-wheat flour goes further in bread making than white flour, as it does not require as much flour to thicken the sponge.

Why do not more farmers pattern after the example set by this young farmer and set their fanning mills, their barrel churns and their feed grinders to converting their wheat into flour, incidentally giving them the ground wheat recommended on the bill of fare by the health evangelist I have just quoted?

When we can save money, conserve our health and make a meal more tempting and palatable, should we not abandon some of our wrong ideas of living and return to the simplicity and the healthfulness of the days of our forefathers? What with "hominy and samp" and home-ground flour, are we not in a fair way to furnish our body the food it demands and reduce the high cost of living so that we shall all be stronger and our bank accounts larger? I am not an expert on health matters, but I do know what seems to be common sense when I hear it preached and recited.

James M. Pierce

THE WISCONSIN FARMER

WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-in-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Avenue Des Moines, Iowa — 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscriptions or advertising may be addressed.

MEMBER AGRICULTURAL PUBLISHERS' ASSOCIATION. MEMBER OF AUDIT BUREAU OF CIRCULATIONS

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of 100 or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance. $5.00. Subscription price in Canada $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as before or state both the old and new names and explain why you change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address

The Wisconsin Farmer Madison, Wis.

Renew Promptly.

Now that the new year is fairly launched, we wish to repeat our suggestion that all readers whose subscriptions expire in the near future, lose no time in sending us their renewal so as not to miss a single issue of The Wisconsin Farmer for 1917. Those who adopt our suggestion will find that there is no delay whatever in extending their subscription upon our books, but those who delay until the busy season is at its height (which will be within a few weeks now) may find themselves missing an issue because of their tardiness. We have extensive plans already well-nigh perfected to make The Wisconsin Farmer more interesting and entertaining and of greater practical value in 1917 than in any previous year, and we sincerely trust that every one of our present large circulation family will remain with us throughout the entire year.

We wish to urge once more that those whose subscriptions expire attend to the renewal promptly. But this is not all. We hope all of our readers will take the time and trouble to ask their friends and neighbors if they are readers of this paper and, if they are not, induce them to send in their subscriptions also. By this cooperation between publisher, editor and subscribers we shall be able to carry out all our plans and leave nothing undone to make The Wisconsin Farmer stand without a peer among the practical and dependable farm weeklies of the country.

Send in your renewal promptly and ask your friends and neighbors if they are subscribers to The Wisconsin Farmer. If they are not, take their orders or see to it that they send them in direct.

Encourage the Wisconsin Boy Farmer.

More than 25,000 boys and girls in Wisconsin are interested in some branch of boys' and girls' club work. Some are raising a pig, others feeding a calf or tending a plot of ground. An address delivered by Mr. J. G. Poynton, of Fort Atkinson, at the dairymen's convention on the "Boy Farmer" causes us to wonder how many fathers and mothers had their heart and soul in the boys' and girls' work. Mr. Poynton's plea was to make the boy the partner of father. The same should hold true as it affects the daughter and we wish to quote briefly from Mr. Poynton's address:

The boy is father to the man. The dairy farm boy of today should be the dairy farmer of tomorrow. Therefore, his education and training at home should be such as will interest him in the dairy farm and give him practical training in dairying while he is yet a boy. There is no better way to do this than for the father to help him get started in business in a small way for himself. The desire to own something and to be a business man like father is inherent in most boys and the wise, dairy farmer father will build upon these foundation stones. A good dairy calf or other farm animal will satisfy the first desire and the right kind of help and encouragement will help the boy satisfy the second for himself. That such a plan can be made successful has been and is being proved repeatedly. Farm boys in various sections of the country today have small paying business of their own built up from a calf or pig or a plot of ground.

The danger in this work is that the father will not play fair with the boy. He may let him have the calf or pig, but later after the youngster has developed it into a first-class animal, he perhaps takes it back, sells it, and pockets the money. This is manifestly unfair to the boy and certainly does not tend to interest him in the farm or the dairy business. "Boy's calf—father's cow" will educate the boy away from the farm.

This plan, as outlined, applies to individual effort on the individual farm. It is the spirit that every father should have. Every boy should desire, while still in his knee pants, to undertake something on his own account. Experience is a valuable teacher—it might as well come while the boy is young that he may profit by it.

The thought occurs to us that this same spirit of partnership should prevail between every one of the 25,000 boys and girls in the young folks' club work and their parents. The club contests start them to doing something—the fathers and mothers should encourage them to continue. If the son is feeding a calf in some club contest let him have the calf. If a pig give him the pig. If he grows an acre of corn give him what he produces. In other words, put him into business; make him a partner and there will be provided then a greater incentive than a prize for which he may strive.

Cannot Make Pure Breds Out of Grades.

There is an interesting principle in animal-breeding operations which involves the question of whether it is possible by continually using pure-bred sires to eventually bring a grade herd to a point, so that the progeny can be regarded as pure bred, or, in other words, so that they will become eligible for registration. A case in point comes from one of our readers, who sends the following communication:

My principal hobby has been hog raising. What I want to find out is this. As I stated before I started fourteen years ago with some of the best Poland China grade sows that I could find. Since that time I have always bred to pure-bred boars which were always big, strong, heavy-boned pigs, sometimes buying at the state fairs and sometimes at county fairs. Now the question, are my hogs pure breds? Some people tell me they are.

I sell male pigs and brood sows every year and never have enough to go around. Of course, understand, I never sell pure breds. When asked what they are I always tell them the course I have been following. I have just sold twelve male pigs that came from the 16th of April to the 22d of May last, averaging less than seven months at $25 per head and weighing from 230 to 250 pounds, and have sold a good many young sows with pig at eleven months old and less, weighing 400 pounds and over each.

I raise from 100 to 125 each year. On August 20th last I sold the young boar that I used last year at the age of sixteen months and eight days old that weighed 510 pounds.

I am using a boar this year that came the 12th of last February and weighs at present 360 pounds.

Please let me know through the columns of The Wisconsin Farmer if I have pure-bred hogs or if I would ever have by using pure-bred males, having started with grade sows.

These hogs are not pure breds and never could be, no matter how many generations of pure-bred sires are used in the future on this foundation stock. No animal can be regarded as a pure bred that is not eligible for registration in one of the legally recognized registry associations. For all practical purposes from the standpoint of pork production this subscriber's hogs would compare favorably with pure breds, because it seems that special pains have been taken to use extra good sires generation after generation. On the other hand, the registry association requires that all animals recorded must come from recorded sires and dams and, this being the case, it becomes apparent at once that it would be impossible to reach a point by using pure-bred sires alone on grade stock that would make the progeny eligible for registration.

There is no question in our mind but what this is a case where a few pure-bred sows should be purchased and in due time it would result in having a fine pure-bred herd, and the animals could be sold at much higher prices than those mentioned by this subscriber. A pair of good pure-bred sows would answer every purpose to start with and from this beginning a full herd would soon result.

Food Production and Supply.

The relation of food production to the increase in population in the United States is a matter which was given some attention at the recent annual convention of the American Society of Equity at Wausau, Wisconsin. The Organized Farmer, the official organ of this society, publishes some very interesting statistics along this line. In June, 1900, the population of the United States was 75,994,575. According to the government census of 1899 there was in this country 18,865,000,000 pounds of beef, veal, mutton and pork, or 248.2 pounds per capita, based on the population statistics above referred to. The population of the United States in 1916 had increased to 101,882,479. The pounds of meat had increased to 22,378,000,000 in 1915, according to the latest available figures. The per capita loss of beef, veal, mutton and pork had decreased from 248.2 pounds to 219.6 pounds. If we take into consideration the inevitable law of supply and demand it would seem very reasonable that these meat products would be increased in value.

A similar condition exists in the relation of dairy products to population. In 1899 there was produced in this country 7,265,804,304 gallons of milk, or 95.6 gallons per capita. Ten years later, in 1909, there was produced 7,466,406,384 gallons, or 81 gallons per capita a loss of 14.6 gallons per capita in ten years. The production of milk in 1915 (estimated and based upon average annual increase) was 7,696,844,000, or 75.5 gallons per capita, a decrease of 20.1 gallons per capita in twenty years. In 1899 this country produced 1,790,097,214 pounds of butter and cheese, an average of 23.6 pounds per capita. Ten years later the production of butter and cheese was 1,942,378,069, or 21.1 pounds per capita, a loss of 2.5 pounds per capita. There are no available figures on the production of butter and cheese in 1915.

The items above referred to are those of greatest interest in Wisconsin. It is interesting to recount some other important items in the food supply of the nation and this may be done by ascertaining the per capita relationship of production to population without going over the dizzy mass of figures necessary to state the actual production.

In poultry we seem to be keeping up pretty well with the increased population. In 1909 the poultry produced averaged 5.3 per capita and in 1915, 5.5. In 1899 the egg production was 17 dozen per capita; in 1909, 17.3 dozen per capita and in 1915 (estimated) 17.8 dozen per capita.

In the matter of cereals the country produced 43.9 bushels of corn, wheat and rice per capita in 1899 and only 40.2 bushels per capita in 1915. In potatoes we produced 3.6 bushels per capita in 1899 and 3.5 bushels per capita in 1915; sweet potatoes, .56 bushels in 1899 and .73 bushels in 1915. In orange, lemon and grapefruit the production was .093 boxes per capita in 1899 and .272 boxes per capita in 1915. In apples, peaches and pears the production was 2.6 boxes in 1899 and 3 boxes per capita in 1915. In 1899 6.1 quarts of small fruit were produced per capita and in 1909 only 4.6 quarts.

As effecting Wisconsin and surrounding states of the grain belt there is an increased demand and a diminishing supply of the more important products, such as meats, dairy products and cereals. These figures will furnish us with some basis for estimating the importance of other farm products and the probabilities of their remaining at good prices in the years to come.

Remarkable Gains on Hogs.

Some stockmen have the elements of success in their make-up, while others, try as they will, meet failure half way. The situation would be altogether discouraging if shining examples of success could not be given, and at this time we desire to relate the experience of a subscriber whose modesty is responsible for the request that we withhold his name.

This subscriber purchased nine hard-looking, runty fall pigs last April. They were about six months old and the nine weighed 600 pounds, which is ample proof that their growth had been stunted for lack of feed and care. They were not only small and hard looking but their forlorn appearance, according to this subscriber, suggested that they were not in the best of health. The tails of these pigs were not curled in pride over their backs, as should have been the case, but pointed straight to the ground, the position in this respect being in harmony with the way the pigs looked and felt. They were a dejected lot. Life was an uphill road for them and there was no profit forthcoming from the bunch, as the owner thought. A neighbor, our subscriber, was short on pigs and long on courage so he bought these pigs for $27.

The purchaser was short on grain, but he had five good cows and was selling the butter fat from these cows

so that he had an ample supply of good skim milk. With this product, together with 150 pounds of middlings and eight bushels of oats, he carried these nine pigs through the summer up until the 1916 corn crop was ready to feed. For a period of three or four weeks they had access to a pasture of rape and oats, but during the balance of the time the grazing was rather slim. Beginning about the middle of September they were started on corn and they had access to all the tankage that they would eat, this being supplied in a self-feeder.

We come now to the third and final chapter in the career of these shoats. On November 18th they were sold for $9.15 per 100 pounds and they tipped the beam at 3,000 pounds, or an average of 333 pounds each. The gross selling price of one pig paid for the original nine and, while no record was kept of the corn consumed, every practical swine breeder will see at a glance that these pigs paid a handsome profit even though they were fed high-priced grain. The incident shows the possibilities of realizing profit in pork production when there is plenty of good common sense rationally mixed with the right kind of food and fed in the proper manner.

Interesting Wisconsin Farmers in Beef.

The recent baby beef contest conducted under the auspices of the Wisconsin Live Stock Breeders' Association and the International Live Stock

W. L. HOUSER, MONDOVI, WIS., CONDUCTOR OF BEEF INSTITUTES.

Exposition at Chicago, have each served to arouse interest in great beef production in this state. Wisconsin has about 1,750,000 dairy cows and about 1,250,000 head of beef cattle, so it may be seen that the beef industry has not been entirely neglected. But there is great room for advancement both in number of beef animals and in quality of beef animals. In fact, if every one of the beef animals we now have were a first-class animal, well bred and well fed, Wisconsin would be a good deal higher in the scale of beef-producing states than she is.

To further stimulate interest in better beef, as well as more of it, a series of special beef institutes have been arranged under the auspices of the Wisconsin Live Stock Breeders' Association, the Hereford, Aberdeen Angus, Short-horn and Red Polled state breed associations and the department of farmers' institutes. According to the schedule sent out, the first meeting was to have been held in New Richmond, the home of the new farmers' packing plant, this week, and the dates announced for other meetings are as follows:

January 5th, Ellsworth, Pierce county; January 9th, Alma, Buffalo county; January 11th, Bangor, La Crosse county; January 16th, La Farge, Vernon county; January 18th, Viola or Yuba City, Richland county; January 23d, Lodi, Columbia county; January 25th, North Freedom, Sauk county; January 30th, Dodgeville, Iowa county; February 2d, Mineral Point, Iowa county; February 13th, Lancaster, Grant county; February 15th, Bloomington, Grant county; February 20th, Livingston, Grant county; February 22d, Darlington, La Fayette county; February 27th, La Grange, Walworth county; March 1st, Lake Geneva, Walworth county; March 6th, Evansville, Rock county; March 8th, Avalon, Rock county; March 13th Cambia, Columbia county; March 15th, Fox Lake, Dodge county.

These institutes will be conducted by Mr. W. L. Houser, a well-known stockman of Mondovi, Wisconsin, who has had experience raising beef and horses. The Wisconsin Farmer urges every reader who can to attend these beef institutes.

While we have some of the foremost breeders of the nation in Wisconsin, there is not the general interest in good beef raising that there should be. We have had a good corn year throughout the state, and it has been demonstrated that corn can be raised in paying quantities every year as far north as the central portion of the state, provided care is taken as to the selection of varieties. Corn is even being raised to good advantage in Upper Wisconsin, and some of our northern counties have been making the southern counties look small when it came to yields per acre.

It is an entirely mistaken notion that the great grass crop of Wisconsin can be turned into profit only through the agency of the dairy cow. We would not depreciate the value of the dairy cow, nor her possibilities in the way of profits, but it is a well-known fact that not every farmer is adapted to dairying. Some do better with hogs and some do best with beef cattle, and The Wisconsin Farmer wishes to encourage the beef cattle industry, especially in the southern and southwestern counties. Wisconsin grass-fed cattle have commanded good prices at the Chicago and St. Paul stockyards for years.

Work of Cow-Testing Association

What It Means to Organize the Work—By Noel Negley, of Wisconsin Dairy Association, in Address at Tower Hill, Wis.

EVERY dairyman should be interested in the cow-testing association, for it is a movement that touches his pocketbook, a proposition that makes more money for the man who milks. Progress and then success spring from dissatisfaction with present conditions. The fifty-three active cow-testing associations in Wisconsin are made up of dissatisfied men. A year ago Mr. E. O. Frihart, of Waupaca, was dissatisfied. He was milking eleven cows and getting a monthly cream check of $35. He joined the Waupaca and Butternut Ridge Association and by weeding out the robber cows and replacing them with good cows, by giving the herd better feed and care has increased his monthly cream check from ten cows to $110 per month, one cow less to milk and a cream check three times as large. One thousand five hundred men, now members of Wisconsin cow-testing associations, could tell somewhat similar experiences of the benefits the cow-testing associations have been to them.

A cow-testing association is simply a group of twenty-five or thirty dairymen who unite in hiring a man to weigh and test the milk of each cow in their herds, to keep the production and feed records and to do what else he can to promote the interests of the members. The movement is neither old or new, yet it is old enough to have proved its worth in making dairying more interesting and profitable, but so new that your community is not getting the benefits of one.

During the past fifteen years the price of feed has increased about 50 per cent, while the price of dairy products has increased only about 30 per cent. Labor and land values have also risen, making it necessary to lower the cost of production in order to make a profit in the business. The low producing or "robber" cow is undoubtedly the greatest factor in increasing the cost of production. To detect these "robber" cows is then the first duty of the cow-testing association. "The poor ye have with ye always" is true of cows, as it is of people, unless we detect and dispose of them. If we do not dispose of these poor cows we become poor like they, and the more we have the poorer we get. The Stanley association sold 101 poor cows or one-fourth of the cows in the association before the year closed. Welcome association sold twenty-eight unprofitable cows the first year and ninety-two the second year. Antigo association sold fifty-four "boarder" cows before the end of the year. The Sheboygan association, in one of the best dairy sections of the state, found eighty-nine out of the 480 cows to be unprofitable and sold them during the year. If this be true in sections where men are recognized as competent breeders and care takers I believe I am safe in saying that Wisconsin, with her 1,700,000 dairy cows, is feeding, milking and caring for a half million of them for the fun of it. Last year records of 19,000 cows were kept and about 4,000, or more than one-fifth the number under test, were sold as unprofitable. The time is past in Wisconsin when a man claims that he can tell by looking at or even by milking her how much milk or fat a cow will give in a year. The Babcock test, the milk scale, and the yearly record are the only reliable judges of cow ability to convert feed into fat, and the cow-testing association seems the best way to use these means, for it insures the work being done accurately, promptly, impartially and economically.

While the cow-testing association is locating the unprofitable cow, it is also locating the profitable cow—the cow that will return $1.50 to $3 worth of dairy products for every $1 worth of feed. To know what each cow produces during the month and the cost of the production stimulates interest in the cows as individuals and causes the whole family, and the hired man, too, to take new interest in the dairy business.

The cow-testing association renders also an important service in breeding. The best way to get a high-producing herd is to raise it, for no other dairyman is anxious to sell you his best cows or heifers from his best cows. "Like produces like" is our safest maxim in breeding and we must then know what kind of a sire we have and what kind of cows we breed him to. It is known that under Wisconsin conditions the total net cost of raising a calf to two years of age is over $60. We cannot afford to spend this amount of time and money to raise an unknown quantity. The "sire is half the herd" and usually is a pure bred and costs a big price, yet we seldom know much more about him. Too often his real ability is indeed scrubby. The cow-testing association tests the bull, too. The records of the daughters compared with their dams give his true value, and if he is a good one he can be kept in the association and render valuable service for many years.

Wisconsin cow-testing associations are also saving their members hundreds of dollars in feed bills and yet getting greater returns in milk. Before feed and milk records are kept many of the dairymen are feeding all of the cows the same regardless of production, usually overfeeding the low-producing cow and underfeeding the high producer. When the milk and feed are weighed daily, or weekly, or even monthly, he becomes interested in the individual cow and feeds her according to her ability to pay for it. Many dairymen know that they pay $24 per ton for bran, but they do not know if they are getting $18 or $40 per ton for it when they sell it to the herd. From the cow-testing association record you can know each month the cost of producing one pound of fat, 100 pounds of milk and the returns for $1 expended for feed for each cow in your herd.

Many of the associations are also co-operating in the purchase and sale of cattle, the purchase of feed and other necessities about the farm. In most cases in purchasing feed the members give the local dealer a small commission for handling the order, the members usually paying cash and taking the feed direct from the car soon after its arrival.

The cost of running such an association is merely the cost of hiring the tester to do the work and to furnish him with the necessary outfit and supplies. This cost will vary depending on the wages paid the tester and the number of cows in the association. The usual cost is $1.25 per cow per year when 500 cows can be obtained among the membership. Since the tester spends a day at each place once a month, there are usually only twenty-six members. However, if the herds are small and so situated that the tester could handle two herds in one day the membership can be increased. In addition to the charge per cow most associations assess a 50-cent membership fee to pay for the testing machine and to meet incidental expenses of the association. Desiring to further this work, the Wisconsin Dairymen's Association, the United States Department of Agriculture and the University of Wisconsin furnish the herd record book to each member and the other blanks and books needed by the tester and will give the association as much assistance as possible in its organization and supervision. The officers of the association consist of the president, secretary, treasurer and a board of directors consisting of three other members together with the three officers mentioned. All fees are paid to the treasurer quarterly in advance that he may pay the tester his monthly wage at the end of each month.

Backing Up the Cow.

To the Editor:—No matter how good a cow we may have we need to back her up well or she will fail.

Turn the best cow in the world into a pasture where the grass is thin and poor all the time and it may be set down as a fact that her milk will not come up to the mark it might were she well pastured. Thousands of cows are thus hampered and prevented from doing their best. That is why on our farm we have for a long time been bending every effort toward clearing up the pastures of brush and weeds. Naturally the land is strong and runs to brush. It was once a forest evidently, although that was before we came on it. After it was cleared of the heavy timber great numbers of shoots grew up and so shaded the earth that what grass did grow there was scant and not very good. But as soon as the brush and stuff were cut off we got fine grass. I have often wondered where the sweet clover seed came from that followed this clearing. No seed ever was sowed there that I know of. Still, there it is, rank, sweet and juicy. The stock like it immensely and it makes milk that is rich as gold. Every acre we clear makes it possible for us to keep one cow more, and it is the one cow more that brings success.

Then, too, we can back our cows up by supplying them with better water. Much of the water of the pastures of this country is below par. A great deal of it is warm and unpalatable in the summertime. Low, swampy places do not afford the best water. On farms where there are no springs it pays well to put down drilled wells. We did that and never were sorry for it. Many years when other wells in the neighborhood were dry and the farmer folks out of water we have had a plenty and been able to help out our friends in their time of trouble. When the well is low an engine does the pumping for us.

The good cow needs the added backing of good feed, well prepared and fed with intelligence. We have been slow to learn this. A good many have not yet mastered the art of feeding. Few farmers that I know have anything like a well-planned method of balancing and dealing out a cow's ration. The bill of fare in most cases is one-sided and aside from the purpose for which it was intended. Even the hogs are fed more systematically and effectively than are the cows.

We are in a hurry, night is coming on, the chores will be a bit late. So the cows are chased up from the pastures on the run and milked when hot and uncomfortable. A small matter, do we say? It is a big matter in the course of the year. No such detail of dairy farming can safely be passed by lightly. Everything counts.

It is worth while to second the efforts of our cows to do their best. In fact, we must do it or we will sooner or later go down before the hot blast of latter-day competition. Far more often than we know the reason why men drop out and give up dairying is not that the cows and the farm are not all right; the man himself is at fault, and a little good thinking would have prevented all this difficulty.

"The TRACTOR UNIVERSAL"

Announcing the New and Sensational T-R-A-C-F-O-R-D

Here is the latest and most sensational tractor proposition of the season.

It is a development which already faces a nation-wide demand.

The *Tracford* is a tested and proven attachment for the standard Ford car. After a series of rigorous tests lasting throughout the summer, we are now ready to offer you the perfected machine—a product thoroughly in keeping with Ford dependability.

Multiplies Ford Power—Utilizes Ford Efficiency

The *Tracford* works only on high gear—has a 9 to 1 gear reduction, reducing the speed of the Ford nine times, increasing the power at the drawbar ninefold. *The pull comes on the Tracford, not the car* The *Tracford* will do any work anywhere that can be successfully handled by three good horses.

A special circulator *absolutely prevents over-heating.*

You can attach the *Tracford* in one hour's time—only two half inch holes in the Ford frame are necessary—a blue print with full directions is furnished. Anyone who can use a wrench and follow printed instructions can do the job.

The *Tracford* quickly pays for itself. You won't have to buy that extra horse for spring work—you can do more work—better work—avoid feeding-when-idle expense—save 33⅓% in time—*and then convert your Ford back into a pleasure car within an hour.*

Simple—dependable—light weight—powerful—inexpensive to buy and maintain—will do the work of three horses—absolutely guaranteed,—the *Tracford* is "the tractor universal"

There is a *Tracford* dealer in your district. Let us put you in touch with him.

"The Tracford Catechism" answers every question you may want to ask. Send for it.

Earn $150. A Month

Start In Business On Our Capital

Hundreds of men scattered all over the United States are making money fast handling our big line of household necessities, Medicines, Extracts, Toilet Goods, Perfumes, Spices, Stock Remedies, etc.—over a hundred different articles in all. A team and wagon or auto is your only investment. We will supply you with $500 to $3,000 stock of goods on credit—and without interest. You pay us for the goods when customers pay you. This way you build up a big, money-making business on our capital and earn a good salary right from the start. Any time you wish, you can return all goods on hand and we'll give you full credit for them.

Proven Successful Selling Plan

Our line is the only one sold from wagons on a Sanitary Free Trial Plan. Makes it easiest to sell. Gives the salesman biggest profits. These are not mere claims, but proven facts. Get details of this wonderful new selling plan which has made ours the fastest growing company of its kind in the world and our salesmen the most successful and prosperous.

No Experience Required

You don't need to be a salesman or a registered druggist. We show you just how to make sales, furnish first-class advertising free and co-operate with you in building up a big, permanent, money-making business. If you have a fair, common school education, are ambitious and willing to learn, you can succeed. You will have exclusive territory and regular customers who will buy their supplies from you, trip after trip, assuring you big sales.

Swine Week an Important Event.

(Continued from page 1.)

Wis., in the chair, will be discussed.

Henry Michels, of Malone, will be chairman in charge of the annual meeting and program of the State Agricultural Experiment Association, Thursday, February 8th.

On Friday, February 9th, will occur the Wisconsin conference with especial attention to better rural schools. C. J. Galpin will preside. This day is to be known as Dairy Cattle day, and a considerable portion of the program will be in charge of the Wisconsin State Dairymen's Association, with N. Michels as chairman. Addresses will be delivered by five well-known dairy authorities.

Grouped about the program of the "main show" will be several group sections and special courses, given by departments of the college of agriculture. These will include a course for dairy manufacturers at the dairy school, a school in gas engine and tractor operation, given by the agricultural engineering staff, a course for farm fruit growers, a conference of cow testers, and the interesting state high school stock judging contest with more than twenty-five three-man teams in the ring.

During the early morning hours of each day separate class room sections on side lines of farming will be discussed and demonstrated. These include tile drainage, soil management, poultry raising, orchard management, the farm-loan act in all its phases, feeds and fertilizers, co-operation in marketing and other things, tuberculin testing, care and use of farm separators, relation of landlord and farm tenant, hog cholera prevention and a number of other miscellaneous items of great value.

Evening assemblies will be an added attraction of the big week, as usual. The speakers who will talk at these sessions have not all been decided upon, but the present list includes Dr. A. S. Alexander, department of horse breeding, University of Wisconsin; Prof. W. M. Hayes, formerly assistant secretary United States Department of Agriculture; M. D. Munn, president National Dairy Council.

How This Hobo Idea May Save Time.

To the Editor:—The average live farmer is always on the lookout for new ideas that make for efficiency. This is why the social farmer has the advantage, because the other fellow usually has some ideas that he can appropriate.

This is about an idea that originated with a hobo and was appropriated by a senator-farmer, who thought it was the best he had ever seen.

"For years," said the farmer-politician, I had always backed my team out of the hay barn, each horse singly. The ordinary hay barn on the farm is given over mostly to mows with a narrow drive between them for the load to come in. When the wagon is in the barn it is necessary to separate the team and lead each horse out one at a time. This had always been my plan and it had never occurred to me that there was any better way of doing the stunt. In fact I had never thought of any different plan because, I suppose, I had learned to do it this way.

"One day I hired a hobo to help me remove a crop of hay from a field into the barn. The approach of the barn floor is elevated and this day the hobo was driving the team. We had driven a load into the barn and I was in the mow helping to distribute the hay around. After the last fork had come up and I had scarcely turned around and looked down the "bo" had the team unhooked from the wagon and standing in the rear waiting to push the wagon back. The apparent speed of the transaction surprised me and I thought I would watch him next time.

"Instead of doing it as I had, and the only way I thought it could be done, he simply unhooked the traces, backed the right hand horse to the right of the wagon and made the other horse follow out head foremost. Of course, he had to take them by the bits when he did it, but the whole thing was so ludicrously simple that it amused me and forced the thought upon me that all the glittering ideas in the world don't necessarily have to spring from respectable sources.

"The single file, nose-to-nose plan had mine beat a mile and will no doubt be of value to me in future haying operations." The senator who told me this little tale the other day thought it was good enough to tell other farmers and asked me to write it out. He thinks for doing things with ease the hobo has it on the rest of the world by several laps.

W. E. Wood.

Patrons of the Barron Creamery received some good-sized checks for use about Christmas time. There were seventeen who received over $100 each for butter fat sold in November. The price per pound for butter fat was 42 cents.

Want to buy or sell a farm? Make it known by inserting an advertisement in THE FARMERS' MARKET. Six cents a word each insertion.

E-B Farm Tractor

Model L—12-20 Horse Power

A four-cylinder, 2-speed, light-weight tractor of great power, suitable for any size farm. Will pull the implements you now have on your farm—gang plows, harrows, mowers, binders, manure spreaders, road drags or graders. Will also operate your ensilage cutter, feed grinder, circular saw, etc. Does more work than horses—costs less and is so simple anyone can run it.

OPPORTUNITY LAND

Others are making good in Montana and North Dakota and so can you. Montana leads the world in development of farm lands—in quality of grain produced. There is still opportunity to homestead or purchase deeded land at very low prices in this great new golden Montana country. Send for Montana Bulletin today, fully illustrated and with complete information. Up in North Dakota prosperity reigns supreme. Diversified farming is proving a huge success in this great basket of the world. And your share of this land awaits you for a small investment.

Let Me Mail You FREE Bulletins

containing full information about Montana and North Dakota opportunities. I will gladly help you make a choice and advise you honestly about best values on the line of the Great Northern Railway. Write for bulletins and advice today. Address

A Tile Ice House For the Farm.

Ice Is No Longer Regarded as a Luxury But Rather a Necessity From Standpoint of Health.

THOSE farmers who were thoughtful enough last winter to look ahead and store up a supply of ice surely enjoyed the fruits of their labor the past summer. On the farm ice is a necessity and also a luxury. Ice is used for a large number of purposes. It deserves a place on every corn-belt farm. Ice houses can be built with but a small outlay of money. Skilled labor is not necessary for the construction if care is used. In most every section there will be found running water that can be dammed up into a small ice pond. It is common for three or four farmers to get together in the ice harvesting business.

The ice house that is shown here is made of hollow clay tile, making a wall that is twelve inches thick. It stores ice with but little loss during the summer months. Its size is fourteen feet and capacity is about fifty tons. In many sections the materials as are listed here can be had for $139. It has a dirt floor and the footings for the tile walls are of concrete fourteen inches thick made of a 1:3:5 mixture of cement, sand and gravel. The tile walls are laid up in a lime and cement mortar true and in perfect line and the wood sill at the top will be bolted to the wall every five feet.

This makes a solid connection between the tile walls and the frame roof. The rafters are two feet center to center and are spiked firmly to the plate. Set them at one-third pitch and place a cross tie on every set of rafters so as to form a support for the carrier track. The gable ends of the ice house shown here are of frame. The rafters are covered with a shiplap sheathing lumber laid tight and with smooth joints so as to make a firm and solid foundation for the three-ply prepared asphalt and felt roofing material. Build ventilators in the gable ends so as to allow the moisture-laden air to pass out. The material list follows: Ten barrels cement, 650 hollow tile blocks, two pieces 2x12 fourteen-foot plates, two pieces 2x12 twenty-foot plates, twenty-two pieces 2x4 ten-foot rafters, ten pieces 2x4 eight-foot cross ties, two pieces 2x12 ten-foot door frame, 530 feet of roof sheathing, 100 feet six-inch flooring lumber for doors and gable, four and one-half squares of three-ply roofing. At one end of the house is the door which runs from the ground up to the plate. Build this door in sections and make it double thick with building paper in between the layers of lumber. Cut some short lengths of planks or leaves that can be set in back of the door so that the ice and the sawdust filler will not crowd in against the doors.

CROSS SECTION.

THE TILE ICE HOUSE MAKES A GOOD APPEARANCE.

Central Wisconsin Cheesemakers.

The Central Wisconsin Cheesemakers and Buttermakers' Advancement Association met recently at Thorpe. There were thirty-one cheese exhibits and two exhibits of butter scored. Ten of the exhibits scored over 93. It is proposed to try to get the next state cheesemakers' convention for Marshfield.

Bonus For Sugar Beet Growers.

Sugar beet growers of Marinette county and vicinity received a bonus of over $2,000 when the sugar factory announced a bonus of 50 cents per ton on all beets delivered to the factory during the past season. The contract price is $6 per ton and the company has agreed to distribute another bonus next year in case the wholesale price on sugar is as high as $6 per 100 pounds. Farmers in the vicinity of Loomis, Marinette county, purchased twenty-three carloads of beets in 1916. The growers in this vicinity did not purchase a carload five years ago.

Used Paris Green For Bugs.

To the Editor:—My potatoes were planted May 31, 1916. They were planted in old ground which was manured in the spring and the manure was plowed under. We went over them with a smoothing harrow when they were just coming up. They were hoed twice and cultivated four times, being hilled a little each time. They were Paris greened two different times in the morning when the bugs were small.

They were dug by hand on the 25th day of September and laid in the sun for an hour. Then they were picked up. One and one-half bushels were taken to the county fair.

G. M. Householder, our county agent, received those which were at the fair. Elizabeth Guns.
Rusk Co., Wisconsin.

Don't wait to put in IDEAL heating!

It is a mistaken idea to think that you have to wait until warm weather to put in an IDEAL Boiler and AMERICAN Radiator outfit.

An IDEAL Boiler and AMERICAN Radiators can be put in your building just as quickly and easily in January as in August. The AMERICAN Radiators come all assembled for placing in the rooms; the IDEAL Boiler sections are easily carried in and made up into a complete boiler in basement or sideroom. The piping connecting the IDEAL Boiler with AMERICAN Radiators is readily run up through corners of the rooms, closets or out-of-the-way places, and the outfit may be completed in a few days to your utmost satisfaction. You will then notice the striking contrast between the chills and cold of old, wasteful methods, and the sure, economical heat aplenty from the IDEAL-AMERICAN outfit, making you glow all over with satisfaction.

AMERICAN RADIATORS & IDEAL BOILERS

A No. 4-19-W IDEAL Boiler and 270 ft. of 38-in. AMERICAN Radiators, costing the owner $200, were used to heat this farm house. At this price the goods can be bought of any reputable, competent Fitter. This did not include cost of labor, pipe, valves, freight, etc., which vary according to climatic and other conditions.

Our IDEAL Hot Water Supply Boilers will supply plenty of warm water for home and stock at small cost of few dollars for fuel for season.

Get the facts now in "IDEAL Heating" free

Don't delay another day in finding out about IDEAL heating and how you can put it in right now. Send for copy of our book, Ideal Heating, which tells you the whole story—no obligation.

Sold by all dealers. No exclusive agents. AMERICAN RADIATOR COMPANY Write to Department F.39 Chicago

Fruits and Garden

Two-Dollar Potatoes.

With potatoes retailing at 50 cents a peck, they become a luxury to many people. And that there should be an actual shortage in many sections, and this is one of the very best farming countries in the world, makes one thoughtful.

The potato is a staple food product and ought to be produced in abundance. Unfortunately it is perishable and cannot, like wheat and corn, be kept from year to year. But even with this disadvantage, if proper attention were given to this crop, we need never have a shortage. This writer has never yet seen a season in which either the early-planted, or the late-planted did not give a satisfactory yield. Sometimes both late and early-planted give good crops, but that is exceptional. Some seasons being favorable for one and some for the other makes the venture of potato growing something of a gamble.

There are several causes leading up to such a shortage as we have in evidence now. First: Comparatively few farmers in our rich prairie sections are potato growers. They specialize in corn and cattle, and only now and then do we find a man who grows potatoes as a main crop. In other words, there is not enough attention given to this crop—not enough effort is made to tide us over bad seasons. And second: Not care enough is taken in selecting good seed and choosing proper varieties to secure the best possible yield in unfavorable seasons.

In the first case doubtless more farmers would plant spuds if they were convinced that there was money in it. They have had some experience in growing more of this crop than they could sell, and have decided to let it severely alone. This is going too far. Following the general principle of diversity of crop, it would prove wiser, in the long run, to keep the potato in the rotation. There might occasionally be a surplus, but even that need not be lost, for the potato has a positive feeding value for stock.

And then when the shortage comes, as in this season, the successful grower may recoup his possible losses in several seasons of overproduction. The words, "successful grower," are used purposely, for even in this difficult year, and right in sections where we say the crop failed, there is now and then a farmer who has grown a very fair crop. How did he do it? Why, by attention to details and by not having his eggs all in one basket.

It happened that in 1916 the very early planted, with best treatment following, gave a good yield. This reversed the experience of two years ago, when in many places the earlies failed and the lates yielded a full crop. It is a question of heat and moisture and the time at which they come. As no one can foresee this, the wise farmer will divide his venture, using half his space for the early crop and half for the late.

The ground for early potatoes should be plowed in the fall. It should be rich, but high, well-drained land. Then plant just as soon as the frost is out. Encourage a strong, rapid growth by constant culture and weeding. The late crop may be planted any time in June. Some would strongly recommend the first half of the month. And, of course, the same thorough culture should be given as for the earlies.

If this course is persistently followed there will not be many years without a fair supply of spuds. And famine prices will never come. The same wise care should be given to selecting the tubers for seed as is now given in selecting seed corn. The time to do this is when the potatoes are dug. Select the best yielding hills and the best specimens from those hills and then your crop will tend to get better each year instead of worse.

If farmers generally, even in the black soil belt, will follow the plans outlined above we will never have again such a shortage as now prevails.

Grading of Rutabagas.

Mr. H. J. Thompson, superintendent Northeast Experiment Station at Duluth, suggests the grading of rutabagas, the poor grades to receive a mark with the choicer grades. If possible, these poor grades should be marketed late in the winter when the market usually advances. An inquiry was addressed to Mr. Thompson asking whether roots or grain would be fed.

One pound of grain is usually regarded as equivalent to from four to nine pounds of roots. This comparison, however, Mr. Thompson says, ignores the succulence of the roots so essential to the health and productivity of animals. Likewise, in the northern country it leaves out of consideration the cost of exchange, that is, of hauling the roots to the market and of hauling the grain back. Moreover, the yield of rutabagas last fall ranged from two to four tons.

Therefore, even with rutabagas at from $17 to $25 a ton, Mr. Thompson feels that the plan should be considered.

As a general result of the year's work at the northeast station, Mr. Thompson recommends a good acreage of hay and roots annually on every timberland farm.

Pruning Trees in Winter.

Mr. W. G. Brierely, of the division of horticulture at the university farm, St. Paul, advises fruit growers that they need not wait until spring to prune their trees. Results at the university farm show little or no difference in the growth or maturity of the wood where pruning has been done any time between November and May. Mr. Brierely advises care in cutting close to the main trunk or branches so that no stubs will be left to die or decay. The covering of the wounds with white lead, oil paint or with common grafting wax, warmed to the consistency of cold molasses, will give added protection.

Takes Out Every Wild Oat

Take Out Every Wild Oat—
No Matter How Badly Mixed—With

Owens Grain Graders and Cleaners

They are the most complete and successful line of Grain and Seed Mills ever put on the market. They will take out every weed seed and impurity, and grade your grain for the market. They will positively rid your wheat of **cockle, wild pea, buckwheat and mustard.** They chaff and clean wheat, corn, oats, rye, barley, beans, timothy, clover, millet, flax, alfalfa, and all other kinds of grain and seed. The Owens is the absolutely reliable machine for northwestern crops.

Owens "New Superior" Grain Grader and Separator

Sow Plump, Healthy Seed

Give your land a chance to produce a real crop. Clean and grade your seed and be sure you are planting just what you want to harvest—not weed seeds. Also be sure you plant plump, live, vigorous kernels. You are not running an experiment farm or a hospital. C. F. Chase, Assistant Professor, Agricultural Engineering, North Dakota Agricultural College says that:

Northwestern grains are infested with mustard, wild oats, kingheads and other weeds, and a grain cleaner would solve the problem. The Wisconsin Agriculturist says: "Grain of high quality cannot be produced from mixed seed. Unless the very best kind of seed is used, the results will be indifferent and unsatisfactory. The best investment a farmer can make is to buy a good fanning mill. Such a mill will more than pay for itself in one season."

Send for the free Owens Book and get the details of our Special 1917 offer.

J. L. OWENS COMPANY, 1127 DARTMOUTH STREET, MINNEAPOLIS, MINN.

WARNING On account of the drouth last season, much of the grain is weak and undeveloped. Don't plant poor, undersized seed and cut your crop in half. Grade everything, and plant only strong well developed kernels that will grow. The farmer who does this will pay for his Owens Mill several times over in next season's crops.

CORN

Farmers' Week (Swine Program), Madison, Wis. Beginning February 6, 1917.

The fourteenth annual convention of the American Society of Equity was held last month at Wausau. Judge D. O. Mahoney, of Viroqua, Wisconsin, and H. A. Fuller, of Mankato, Minnesota, were unanimously re-elected president and vice president respectively. The report of the secretary-treasurer, Mr. H. G. Tank, of Wausau, Wisconsin, shows an increase in membership of about 40 per cent.

The Rock County Live Stock Breeders' Association has decided to continue for another year the calf contest. This work will be in charge of Ira Inman, E. H. Parker, J. H. Fisher, Jas. Van Etta and L. A. Martin. The association has also determined to get behind the various conferences of the farmers to be held in Rock county this winter. Furthermore, it is expected that Rock county will send one of the largest delegations of any county in the state to Madison for Swine Week, February 5th-10th.

At a recent meeting of cheesemakers, held in Dodge county, the new Wisconsin cheese factory license law and its administration by E. L. Aderhold was discussed at some length. C. Hemling discussed this topic from the standpoint of the patron and Frank Westphal from the standpoint of the operator, while Mr. E. F. Horn gave the cheesemaker's point of view. Dodge county has 163 factories, most of which were erected some years ago. There has been a determined effort to comply with the new law and improve the condition of the cheese factories. In this connection the meeting approved the work done by Mr. Aderhold. A great deal has been accomplished in the last year toward bettering cheese factories in Dodge county and more will be accomplished in the near future.

Wild West stories are usually considered out of date in Wisconsin, but one comes from Iowa county which is of considerable interest. The Polzskill Bros., stockmen of Mineral Point, purchased a carload of cattle from Jas. McGilligan. This herd was raised by Anderson Bros., and has been purchased six times within the past year, but in each instance the buyer has been unable to get his cattle to the stockyards. These cattle, having been pastured on a wooden tract of land always became frightened by those who attempted to drive them up. Even attempts to drive them at night failed. Some time ago Mr. McGilligan, with a force of ten men, undertook to drive these cattle to the stockyards. For one-half mile they went without trouble and then started on a regular stampede. They tore down several fences, finally arriving at the Anderson farm. Repeated efforts to drive them up resulted in similar failures. We quote the following from the Dodgeville Chronicle relative to the final round-up of these cattle.

The Polzskill Bros., John, Peter and Chris, who have the reputation of being the best herds in this section, accompanied by Joe and Henry Graber, Joe Marr and Fred Gulner, of Mineral Point; John and Chris Anderson and Charles and Henry Paull, of Dodgeville, mounted horses and started to drive the cattle from the Anderson farm to the Polzskill farm in Mineral Point. Some cows were taken to help keep the others quiet. When they had gone about 200 yards from the farm, the wildest of the steers became frenzied and broke through the fence near the John Grenfell farm and ran east through Cox's hollow to the Edw. Williams farm. The rest of them followed the leaders. The men being unable to keep up with the cattle on their mad dash through fences and over rocks and brush, were obliged to telephone the neighboring farmers in order to locate them. The second attempt proved more successful. This time with the aid of other men who gathered to watch the excitement, they were able to get eleven of them into the stockyards at the Northwestern depot. The other ten still maddened and frightened ran east of the Williams farm to Bunker Hill. Tuesday morning the men succeeded in getting nine of the outlaws back to the Anderson farm, but one still remains at large somewhere near Arena.

Still determined to bring the steers to the stockyards, the men procured an abundance of strong rope and tied three steers together and with the aid of a few more volunteer helpers, they were safely driven to the yards. This scheme having worked out very well, the determined drivers went out Wednesday and brought in the balance of them in the same day.

The cattle are of good quality, but the owners were unable to get the best prices for them because of the uncertainty of getting them to market. The cattle will be shipped to Chicago, as hopes of getting them to the Polzskill farm were abandoned.

Mrs. M. Holub, a patron of the South Kodan Cheese Company in Kewaunee county, for the month of November received a milk check representing the price of $3.42 per 100 pounds of milk. The average price paid patrons of this creamery per 100 pounds of milk is $2.51. The average test of all the milk received was 4.4 and the average price paid for cheese sold during the month was 24 cents. The factory paid 57 cents per pound for butter fat. The Algoma Creamery in the same county paid 63 cents for butter fat and sold its November cheese at 24½ cents per pound. Two patrons of this creamery received $3.15 per pound for milk and the average price of $2.68 was paid to all patrons.

Henry Wertheimer, of Watertown, Wisconsin, well known as being interested in the stuffed geese industry, reports that Mr. Fred Albrecht has raised about 100 birds, averaging twenty-eight pounds each. The heaviest bird of the flock weighed thirty-eight pounds. Mr. Frank Gervig raised thirty-six birds and had the same average weight. His heaviest bird also weighed thirty-eight pounds. At retail, these heaviest birds, worth 50 cents a pound or over, would bring about $18. Mr. Wertheimer remembers a heavier bird which weighed thirty-eight and one-half pounds and was shipped to San Francisco some years ago. The 100-bird flock hereinabove referred to brought its owner nearly $900.

Minnesota and Michigan will pattern after the work done by Wisconsin to interest settlers in land clearing. Arrangements are being made to run special trains over the railroads of these two states and land clearing in the same way that it was done on the Soo Line and North-Western roads in this state.

Sixty milk producers of Walworth met recently at the court house in Elkhorn and organized the Walworth County Milk Producers' Association. Three members were selected as the county's representation on the board of the parent association in Chicago. Harry D. Dunbar was chosen president and Paul Gavin was elected secretary and treasurer.

"At Your Service"

EVERY one of the 296 men and women employed by Northrup, King & Co.—errand boys, truck drivers, warehouse men, seed experts, clerks and executives—are "at your service." Many have had 20 to 30 years' experience in growing and handling seeds. Some are experts in grasses, some in seed grains, others in garden and flower seeds. Through their efforts, coupled with our complete mechanical equipment, we have established definite standards of quality. For the protection of seed buyers, as well as our own reputation, our seeds are sold under three brands.

NORTHRUP, KING & Co.'s SEEDS

These seeds are carefully selected to produce profitable crops in the severe climate of the North. They are thoroughly recleaned, and tested for purity and germination. Because of their real merit, the demand is steadily increasing. They are sold by dealers in nearly every community throughout the Northwest. A merchant can get for you, quickly, any of Northrup, King & Co.'s Seeds which he may not have in stock—no matter the size of your requirements—one packet or a carload.

In anticipation of the largest seed demand this firm has had in thirty-three years—greater even than last season—we have gathered together tremendous stocks of high grade garden, grass and field seeds. Many hundred carloads are now stored in our several large warehouses. Our facilities for quick and accurate distribution were never so complete as this year. But, to avoid disappointment in not being able to secure desired stocks, we advise planters to list their requirements and place early orders with our dealers for 1917 seed.

For Successful Crops Sow Seeds Which Are

Identified By These Three Brands

NORTHRUP, KING & CO., Hennepin Av. at First St. MINNEAPOLIS, MINN.

"The Furrows Just Rolled Off the Mouldboard"

"And they rolled out all day long as we went round after round over the field. Scour? I never saw a plow scour so clean in my life, and the soil was wet in spots, too. Plowed as well in low land as in my best field. I simply drove the team and kicked the foot lever to raise and drop the plows at the ends of the furrows. The floating plow bottoms peeled off the furrows as slick as rolling a rug. The team had a snap compared with the old plow. It makes one feel good to look back over a field of furrows all the same size and straight as pins." So writes Will Hughes, Johnstown, Wis., telling about his work with a

JANESVILLE PLOW

Magnificent for Fall Plowing

With S & S Pulver Twist Mouldboards

It is logical to expect such work from Janesville Plows. They have been made and sold for many years. Were designed from the "know-how" taken out of actual everyday work on the farm.

The Janesville Auger Twist Mouldboard is not only formed to curl the furrow smoothly, but glides through the soil with a *"flexible" movement.* It acts somewhat like the movement that you get in a spade when digging in a hard ground. The plow bottoms have just enough "floating" motion at the cutting edge to take away the "pinch" at the plow points. Reduces the steady all-day pull on the team. This *"flexibility" is found only in a single bar plow such as the Janesville.* With the Janesville, you can make *one plow do all your plowing.* No need to change plows for different kinds of soil. Use the same plow in sod, corn land, stubble, sticky loam or heavy clay. Write for catalog.

JANESVILLE TRACTOR PLOW

Fits any tractor and any soil. Puts the same high quality plowing behind any tractor that you get in Janesville horse plows.

This Book Free

Filled with helpful hints on plowing. Shows photographs of prize winning plowing at famous plowing matches. Send for a copy and read how you can take the hard work out of plowing. Also ask about Janesville Harrows, Cultivators, Corn Planters, Listers, Weeders and Seeders.

Stump Land Is Expensive Land.

Whether the Stumps Be in Pastures or Crop Fields They Lessen the Opportunity to Get All of the Profits Out of the Soil.

THERE ARE STILL MANY STUMPS IN OUR WELL-CULTIVATED SECTIONS WHICH OUGHT TO BE PULLED.

"HOW can I get a little more good land?" This query doubtless comes up in the mind of every reader of this paper at some time or other. Some have gone a long distance to far countries, but this is not always the most satisfactory way; others try to buy out their neighbors, but if the neighbor has a really good farm the chances are that he will want so much for it a deal is not likely to be made.

A great many have added to their holdings by draining sections of marsh and lowlands. This gives some more good land at a reasonable price and without moving from the old home. Another good way to get more productive acres on the average farm is to clear up the brush and stump lands and pull out the old hedge fences. In this manner it is also possible to get good land without going away for a long distance; in fact, without even removing at all from the old homestead.

IN WISCONSIN'S CUT-OVER LANDS WITH STUMP PULLER.

A NEAT JOB ON A GOOD-SIZED STUMP—DYNAMITE IS USED TO SPLIT LARGEST STUMPS BEFORE PULLING.

How many of our readers have ever stopped to figure how much loss there really is in the stump patch or in the uncultivated grounds about the old hedge fence. We would not think of leaving stumps in the fields which are to be seeded to grain or planted to corn, but quite frequently we do not see the necessity of removing the stumps from pasture land. If a farm contained forty acres of pasture and a neighbor came along and fenced off a quarter or a third of it, there would, of course, be a big row on the part of the owner if he did not get the fence taken down at once. He would probably go to law. He might spend a good many hundreds of dollars getting back this quarter or third of his pasture land. If he didn't get it back he would feel that he had been robbed. He is just as certainly robbed if he has a piece of pasture which is partly covered with stumps. We not infrequently see 150 to 250 stumps to an acre of pasture land, and, while the fence line is not changed about the pasture which is full of stumps, the owner is just as surely robbed of the use of a portion of his ground. But does he go to law about it? He may look at the stumps and wish they were out. If he would sit down with a pencil and paper and see how much the stumps cost him in loss of ground he would see that the stumps were torn out.

The waste caused by stumps, brush and hedges has been computed by a number of our agricultural experiment workers, and the pasture land may be figured as to its value, according to the number of head of stock which can be sustained upon it. If one-fourth of the ground is taken up with stumps or brush or hedge the pasture will sustain just one-fourth less animals than it would if the stumps, brush and hedges were removed.

Our readers will probably be surprised to learn that it has been scientifically demonstrated that a stump twelve feet in diameter practically destroys the value of a piece of ground containing 100 square feet of space. Those who do not believe this statement, or have never had the matter put up to them in this way before, should take a yardstick and go out into the field or pasture and measure off in each direction from the center of the stump to see how much land is actually worthless by the presence of the stump. Take an acre of ground which has about 100 stumps in it, or more, and measure up and figure the loss on each stump. By the time the loss on twelve or fifteen stumps is computed the average man with a good, long head will quit figuring on what the stumps are costing him and begin figuring on how best to remove them.

It is interesting to know that land which may be reclaimed by the removal of stumps by the use of stump pullers is, in almost every case, good land. It is often some of the best land on the place. Soil which will raise good trees will raise good crops. The trees are valuable until they are cut down and carted away, but the stumps have no value at all, unless they can be cut up for firewood. Some of the very best orchards in the grain belt have been built up on old stump lands. There have been two reasons for this: In the first place, the orchard has been neglected until all of the good cleared land is in crops or pasture, but perhaps there is an old woodlot back of the house or somewhere around handy, which has been neglected on account of the fact that it would take a little labor to remove the stumps. That is an ideal place for the orchard. It would also be a good plot for the farm garden or for an alfalfa or rape patch.

When a new field with its extra profits can be added by removing stumps it is certainly not right to let the stumps stay. Get right after these stumps by all means. Any farm will sell better with all the stumps removed. If the prospective buyer is careful at figures he will count up the loss from every stump before he buys the farm. It is just as important to do this as it is to count up the loss which might be sustained by marshes and bogs. This being the case, it pays us to get rid of the stumps, especially since it can be done easily and at small expense, with modern stump pulling machinery.

Our advice for the new year is to clean up the farm and make every acre as valuable as it is possible to make it.

The Wisconsin Farmer has had a good deal to say the past year on the

Pull Big Stumps by hand

Clear your stump land cheaply—no digging, no expense for teams and powder. One man with a K can rip out any stump that can be pulled with the best inch steel cable.

Works by leverage—same principle as a jack. 100 pounds pull on the lever gives a 48-ton pull on the stump. Made of Krupp steel—guaranteed against breakage. Endorsed by U. S. Government experts.

Showing easy lever operation

subject of clearing lands. The state and other agencies, including the college of agriculture, have inaugurated a campaign of education along this line which has resulted in a good deal of good for our state. But one-half has not yet been said that should be said to enthuse our readers to the point where they will get rid of all the stumps and turn their lands into productive property.

We believe every farmer should make a study of this matter of land clearing. It is even more important in our state than drainage, although we do not aim to minimize the importance of drainage.

Farmers' Open Forum

Delighted With His Tractor.

To the Editor:—I purchased a tractor last July and cut 140 acres of oats, operating from the binder seat without taking a team into the field. I found this method very satisfactory for harvesting.

I used about one gallon of gasoline per hour and cut on an average of about two acres per hour. At present I am operating a 170-acre farm. It is level land. Corn, oats and hay are the main crops. My tractor has displaced four horses for me, as I now keep only four work horses on the place. I plowed forty acres of clover sod seven

Lyman Sutton, Bureau county, Illinois, and his tractor hitched to binder.

inches deep, using two gallons of gasoline per acre. This gasoline cost me 15½ cents per gallon. I also used one and a half gallons of oil per day at 35 cents per gallon. I plowed forty acres in six and a half short days in November. I also plowed forty acres of stubble ground away from home. This was very hilly ground and at times I had to plow up grades 25 per cent or more. My tractor seemed to have plenty of power and operated without a particle of trouble. I have not used this tractor for belt work, but I believe it would be all right, as it does all they claim for it in other ways.

Bradford, Ill. Lyman Sutton.

Experience With No. 25 Corn.

To the Editor:—I purchased two bushels of Wisconsin No. 25 seed corn last spring and planted it on good, heavy clay soil. The weather for several weeks after planting was very backward for corn growing, being wet and cool until about five weeks after planting. The corn during this period made a good growth and when the warm days and nights came it was certainly gratifying to note its growth.

Ten days before any other corn in this locality was tassled out the No. 25 had been tassled out, and before we had any killing frost I had my seed corn already picked.

The average height of the stalks grew from eight to nine feet, was very leafy and heavy and I noticed many stalks carrying two ears of corn of medium size, the kernels deep and well dented.

Many farmers in this locality have noted the growth and maturity of this corn and have already taken advantage of placing their orders for seed corn already. They realize that No. 25 is way ahead in maturing in the fall than any other variety they can obtain on the market, and to get ripe corn as far north as Rhinelander certainly speaks well of this variety.

The growing season for corn in this vicinity was very short this year and no doubt if we had a good corn year there is no telling what this variety would do. A. S. Post.

Oneida Co., Wisconsin.

PLOWING

DISKING

Moline-Universal Tractor

Pulls the usual 5 horse load. Does the work of 7 horses because of greater speed and endurance. Turns in a 16 ft. circle. Backs with the implement attached. Will work close to fences and in corners.

Does All Field Work

Can be used for plowing, harrowing, planting, cultivating, haying and harvesting—in fact, all field work.

Develops 10 to 12 H. P. on the belt.

Operator sits on seat of implement at work—just like driving a team of horses.

See your Moline dealer or write us for further particulars.

OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

The Mystery of Feeding Dairy Cows.

To the Editor:—It is a mystery to the average farmer how to feed his cows so as to get the best and the most out of them. I am sure I have used the right word here. Not one out of a hundred farmers that I know has anything like an adequate knowledge how a cow ought to be fed. And that is one reason why dairying is not the success it ought to be with the majority of men. Usually the feed is good so far as it goes. That is, the hay is well cured, the corn of a good quality. But the ration is one-sided, wholly inadequate for the purpose for which it is intended.

Now, can we expect the everyday farmer to have a knowledge such that he will be able to make up a ration scientifically correct? Shall this be gained from books and papers? How shall he learn what is best to feed and how to feed it?

If we depend on the study of books and papers I am afraid we will have to wait a long time before the general run of farmers ever will master this subject. They may read and straightway go away and forget what manner of truth they have been considering.

And here is where the benefit of a personal visitor at the farm or at some gathering of farmers comes in. Call him what you will, farm manager, farm bureau head, farm doctor, that does not count for so much as that there shall be somewhere a man who knows and who will come to the help of farmers who have added hundreds of dollars to their yearly income, simply by becoming members of cow-feeding associations and having the personal guidance of the men at the head of these organizations in buying the right kind of feedstuffs and using them economically. These men have made some changes in their herds since they engaged in this close inquiry into the ability of their cows to take food and make milk and butter of it. A good many cows have gone to the market, while others have been put in their place. In some instances with fewer cows, men have made more money. Great savings in help and food are thus effected.

Now, this work of the farm manager is still in its infancy in this country. We have not all yet understood the value of such a public servant, but wherever farmers have taken interest enough in the matter to look it up they have satisfied themselves that it is a good thing. True, the men assigned to this work ought to be men of ability, men who are qualified to meet the farmers face to face and give them the needed instruction, not only in the matter of feeding stock for the best returns but also in the management of soils and the growing of crops.

It is the opinion of the best farmers that there is no better, no quicker way of acquiring needed information as to farm stock feeding than through the farm bureaus. Personally, I believe it would be a great thing if such a bureau could be established in every county. It would not be long before we would all have a chance to master the art of feeding, as well as some other things concerning which we are now quite in the dark.

E. L. Vincent.

Protecting the Dairy Interests of the Future.

The agricultural extension service of Illinois is looking to the training of its future dairymen. Future members of the cow-testing associations will have been prepared to drop into line for duty, though the junior extension department, which aside from divers other clubs, has added a new department.

This new project is one by which boys and girls from twelve to eighteen years of age will run a test of from one to five cows for a period of six months, starting in October. The test will require the keeping of accurate records of feed, milk and butter fat. Such records as the daily weight of milk from each cow, by each milking, weekly tests for butter fat and the weights of all feeds necessary for the production. A monthly summary will include, among other items, the cost of one quart of milk or the cost of one pound of butter fat.

To further promote this good work a separator company is offering forty $25 scholarships, to be distributed in ten states to junior clubs. Two $25 scholarships, one to each of the best two individuals in the largest club in the state. One $25 scholarship to the best individual in the state. All individuals must belong to eligible clubs. An eligible club must have not less than five members under local leadership and at least five club members must have completed two months' work. Prizes are to be awarded at the end of two months' work and the money thus won is to be expended in a trip to the two weeks' short course at the University of Iowa this winter. An endless chain for a good cause, as it were.

The junior extension service will furnish an outline of work, record blanks and final reports. The assistance of the university will be available at all times. A Babcock tester will be necessary, which will either be purchased or borrowed from someone in the neighborhood.

Cow Testing Reports.

Alban and New Hope Association.

To the Editor:—In the past month, we have succeeded in weeding out five more unprofitable cows which went to the butcher. We have also added two pure breds at the head of two herds in this association. There is still room for more.

Every farmer in our association has a silo on his farm. The average production per cow in this association, for the period covered by the attached report, was 453 pounds milk and 20.3 pounds of butter fat. At the present price of butter fat, this would be an average in production of $8.65 per cow. It has cost us on an average of $4.49 per cow, for feed. This leaves a profit of $4.15 per cow. Would like to know where farmers can find a better argument for good feeding.

The highest producing cow for the period, is owned by Norman Dahlen. She is a grade Guernsey, five years old and produced 1,572 pounds of milk and 66.3 pounds of butter fat. The highest average is held by J. P. Madsen, who has a herd of grade Gurnseys. They produced an average of 702 pounds of milk and 32.3 pounds of butter fat, per cow. The total value of the product was $106.20. The cost of feed was $52.50, making a profit of $53.70. The following table gives the names and records of cows in this association, which have produced more than forty-five pounds of butter fat during the thirty-day period, ending December 10, 1916:

TOLD IN THE HILLS

By Marah Ellis Ryan

Author of "That Girl Montana," "The Bondwoman," "My Quaker Maid," Etc., Etc.

(Copyright Rand McNally & Co.)

PART IV.---One Squaw Man.

CHAPTER I—Lamonti.

"You've been a good friend to me," he continued, "whether I was near or far—MacDougall told me things that proved it; and if my time should come quick, as many a man's has in the Indian country, I believe you would see I was brought here, where I want to be."

"You may be sure of it," she said earnestly; "but I don't like to hear you talk like that—it isn't like you. You give me a queer, uncanny feeling. I can't see you, and I am not sure it is Jack—nika tillikum—I am talking to at all. If you keep it up, you will have me nervous."

He held her hand and drew it up to his throat, pressing his chin against the fingers with a movement that was as caressive as a kiss.

"Don't you be afraid," he said gently; "you are afraid of nothing else, and you must never be of me. Come, come, my girl, if we're to go, we'd better be getting a move on."

The prosaic suggestion seemed an interruption of his own tendencies, which were not prosaic. The girl slipped her fingers gently but decidedly from their resting place so near his lips, and laid her one hand on his arm.

"Yes, we must be going, or"—and he knew she was smiling, though the darkness hid her—"or it will look as if there are two witched folks in our chapel—our white chapel—tonight. I'm afraid we happened here, since the thought is any comfort to you; but I hope it will be many a day before you are brought here, instead of bringing yourself."

He took her hand, and through the white masses turned their faces down the mountain. The mare followed meekly after. The stimulant of bread and whisky—and more, the coming of this man, of whom she was so stubbornly confident—had acted as a tonic to Rachel, and she struggled through bravely, accepting little of help, and had not once asked how he came to be there instead of the ranchmen.

Perhaps it was because of their past association, and that one night together when he had carried her in his arms; but whatever he was to the other people, he had always seemed to her a sort of guardian of the hills and all lost things.

She did not think of his presence there nearly so much as she did of those ideas of his that seemed "uncanny." He, such a bulwark of physical strength, to speak like that of a grave site! It added one more to the contradictions she had seen in him.

Several things were in her mind to say to him, and not all of them pleasant. She had heard a little of the ideas current as to his Indian sympathies, and the doubt with which he was regarded in camp; and, while she defended him, she many times felt vexed that he cared so little about defending himself. And with the memory of the night before, and feminine comments at the ranch after he had gone, she made an attempt to storm his stubbornness during a short breathing spell when they rested against the great bole of a tree.

"Genesee, why don't you let the other folks at the ranch, or the camp, know you as I do?" was the first break, at which he laughed shortly.

"They may know me the best of the two."

"But they don't; I know they don't; you know they don't."

"Speak for yourself," he suggested; "I'm not sure either way, and when a man can't bet on himself, it isn't fair to expect his friends to. You've been the only one of them all to pin faith to me, with not a thing to prove that you had reason for it; it's just out-and-out faith, nothing else. What they think doesn't count, nor what I've been; but if ever I get where I can talk to you, you'll know, maybe, how much a woman's faith can help a man when he's down. But don't you bother your head over what they think. If I'm any good, they'll know it sometime; if I'm not, you'll know that, too. That's enough said, isn't it? And we'd better break away from here; we're about the foot of the mountain, I reckon."

Then he took possession of her hand again, and led her on in the night; and she felt that her attempt had been a failure, except that it showed how closely he held her regard, and she was too human not to be moved by the knowledge. Yes, he was very improper, as much so as most men, only it had happened to be in a way that was shocking to tenderfeet lucky enough to have families and homes as safeguards against evil. He was very disreputable, and, socially, a great gulf would be marked between them by their friends. But in the hills, where the universe dwindled to earth, sky, and two souls, they were but man and woman; and all the puzzling things about him that were blameful things melted away, as the snow that fell on their faces. She felt his strong presence as a guard about her, and without doubt or hesitation she kept pace beside him.

Once in the valley, she mounted Betty, and letting Mowitza follow, he walked ahead himself, to break the trail—a slow, slavish task, and the journey seemed endless. Hour after hour went by in that slow march—scarcely a word spoken, save when rest was necessary; and the snow never ceased falling—a widely different journey from that other time when he had hunted and found her.

"You have your own time finding the trail for me when I get lost," she said once, as he lifted her to the saddle after a short rest.

"You did the same thing for me one day, a good while ago," he answered simply.

The night had reached its greatest darkness, in the hours that presage the dawn, when they crossed the last ridge, and knew that rest was at last within comparatively easy search. Then for the first time, Genesee spoke of his self-imposed search.

"I reckon you know I'm an Indian?" he said by way of preface.

"I don't know anything of the sort."

"But I am—a regular adopted son in the Kootenai tribe, four years old; so if they ask you if an Indian guide brought you home, you can tell them yes. Do you see?"

"Yes, I see, but not the necessity. Why should I not tell them you brought me?"

"Maybe you know, and maybe you don't, that I'm not supposed to range far from camp. Kalitan was to go for you. Kalitan had some other work, and sent a Kootenai friend of his. The friend's name is Lamonti. Can you mind that? It means 'the mountain.' I come by it honest—it's a present Grey Eagle made me. If they ask questions about your guide, just put them off some way—tell them you won't. Now, can you do that?"

"I can, of course; but I don't like to have you leave like this. You must be half dead, and I—Jack, Jack, what would I have done without you!"

He was so close, in the darkness, that in throwing out her hand it touched his face, one of the trivial accidents that turn lives sometimes. He caught it, pressing it to his lips, his eyes, his cheek.

"Don't speak like that, unless you want to make a crazy man of me," he muttered. "I can't stand everything. You'll never know, and I—can't tell you! Don't act as if you were afraid—the only one who has ever had faith in me! I think that would wake up all the devil you helped put asleep once. Here! give me your hand again, just once—just to show you trust me. I'll be worth it—I swear I will! I'll never come near you again!"

The bonds under which he had held himself so long had broken at the touch of her hand and the impulsive tenderness of her appeal. Through the half sob in his wild words had burst all the repressed emotions of desolate days and lonely nights, and the force of them thrilled the girl, half stunned her, for she could not speak. A sort of terror of his broken, passionate speech had drawn her quickly back from him, and she seemed to live hours in that second of indecision. All her audacity and self-possession vanished as a bulwark of straws before a flood. Her hands trembled, and a great compassion filled her for this alien by whose side she would have to stand against the world. That certainty it must have been that decided her, as it has decided many another woman, and ennobled many a love that otherwise would have been commonplace. And though her hands trembled, they trembled out toward him, and fell softly as a benediction on his upturned face.

"I think you will come to me again," she said tremulously, as she leaned low from the saddle and felt tears as well as kisses on her hands, "and you are worth it now, I believe; worth more than I can give you."

A half hour later Rachel entered the door of the ranch, and found several of its occupants sleepless and awaiting some tidings of her. In the soft snow they had not heard her arrival until she stepped on the porch.

"I've been all night getting here," she said, glancing at the clock that told an hour near dawn, "and I'm too tired to talk; so don't bother me. See how hoarse I am. No; Kalitan did not bring me. It was a Kootenai called Lamonti. I don't know where he has gone—wouldn't come in. Just keep quiet and let me get to bed, will you?"

Chapter II—A Philosophical Horse Thief

An hour before dawn the wind came, hurtling down through the mountains and moaning along the valleys; before it drove the flying snow in great chilly sheets, as it was lifted from the high places and spread in every nook that would warrant its safekeeping.

Through its fitful gusts Genesee walked into camp, his tracks filled by the eager flakes as he left them. There seemed a strange alertness about the place for so early an hour—even through the commotion, blissful and despairing, in his own breast, he noticed it as the guard hailed him, and when he replied, he heard from that individual an excited exclamation of astonishment.

"By jolly, if it ain't Genesee!"

"I reckon it is," he answered, and passed on, too tired, yet elated by his night's work, to care whether or not his absence had been commented on.

The door of the shack had barely closed on him when one of the several lanterns that he had noticed floating like stars along the snow at his door, then a knock, and the entrance of a very wide-awake-looking corporal.

"You are to report to Captain Holt at once," was the message he brought.

"What's up?" and the boot that was half way off was yanked on again.

"That's all the message I was given."

"Well, trot along."

His own frowning perplexity was no more decided than that of Captain Holt, as he looked up to notice the entrance of the scout—and there was little of friendliness in the look.

"You sent a man to say you wanted me."

"Yes, I sent a man about two hours ago to say I wanted you," was the ironical reply. "You were not to be found. Have you any report to make?"

(To be continued.)

Settle the Spreader Question

THE farmer who uses a **Low Cloverleaf, Low Corn King** or **Low 20th Century spreader** these days is the man who makes the most money. His land increases in value when regularly fertilized. His crops grow better in quality and larger in yield when supplied with available plant food. Of all the spreaders on the market, the **Low Cloverleaf, Low Corn King** and **Low 20th Century** come nearest to doing this work as it should be done.

It is a long jump from the ordinary machine to the modern low spreader with its double beater and wide spread. Every farmer who knows the value of good spreading is buying one of these wide spread machines. As a matter of fact, no farmer can afford to buy any other kind, because the saving of time and labor and the better job of spreading done by a **Low Cloverleaf, Low Corn King** or **Low 20th Century** makes them worth more than ordinary spreaders.

Complete information about these machines is worth money to you. Drop us a line at the address below and we will show you very plainly why it will pay you to buy a **Low Cloverleaf, Low Corn King** or **Low 20th Century** spreader.

Hot Lunch For School Children.

The plan of supplementing school lunches with hot dishes prepared by the pupils under the direction of the teacher is gradually coming to be a common practice in rural schools.

This extract from a letter written to a Wisconsin girl who is an agricultural extension worker in a neighboring state gives an idea of how the plan works when put into actual operation:

Last Wednesday I saw a noon lunch served in a school fifteen miles from here. I wish you could have been with us to see the girls in their white aprons preparing scalloped potatoes as they recited on the theory of potato growth, cookery and digestion. You would have enjoyed too, seeing the rest of the school preparing for lunch by washing their hands and drying them on their own individual towels brought from home; then laying out on their desks their balanced lunches on old clean, white towels; waiting till all were served and then eating and chatting while the younger ones practiced, at the teacher's suggestion, holding their forks correctly, and finally the orderly gathering of crumbs, closing of pails and marching out to play. But the most pleasing incident occurred when one of the smaller boys insisted on bringing a pail of water alone, because, as he said quite simply, "We ought to be willing to bring water when the girls are good enough to give us a hot lunch.

To carry on the work of preparing hot dishes to add to the lunch brought from home and correlate with it practical information about food values and marketing problems, the rural school-teacher must have a vision. To add this task to her already overcrowded program seems like asking too much, but it is one of the ways to overcome the charge that schools educate children away from the home rather than into it. The teacher's vision must be of a community where the homes are filled with children that help willingly and intelligently with the indoor and outdoor work on the farm, and the reward for her work will be the knowledge that the foundation for the building up of such a condition can be traced to her schoolroom.

Because of the lack of equipment, only very simple dishes can be prepared for the school lunch, but a great deal can be done by the mothers of a community to stimulate effort on the part of the teacher and board, and to secure the co-operation and interest of the pupils. By taking an active interest in the work and helping to furnish the school with the necessary equipment, they certainly can accomplish much. Many of the rural teachers who are trying the hot-lunch plan are using small oil stoves or the flat-topped heating stove. The utensils and towels necessary for preparing and serving the food can be furnished very easily and at little expense if each mother will contribute those necessary for the use of her own children.

In some schools where the equipment is very meager the teacher attempts to serve only a hot drink or one hot dish. This dish, however, furnishes a basis for many practical lessons and the warm food is a helpful addition to the ordinary lunch on a very cold day.

Children in Agriculture.

Child Labor Day, which will be observed by churches, January 28th, synagogues, January 27th and schools and clubs, January 29th, is called a "Look-Around-You Day" by the National Child Labor Committee, and those observing it are urged to study child labor as it exists in their immediate vicinity. In the pamphlets issued by the committee for use on Child Labor Day special mention is made of children in agriculture and people are urged to consider this form of child labor which has heretofore been unregulated. "Nearly three-fourths of our child laborers (1,431,254 between ten and fifteen) are engaged in agricultural pursuits, yet the movement for child labor reform has not even touched this greatest field of all," says one pamphlet. It is stated that the need for regulation of agricultural child labor is great because in many districts children work in large numbers in cotton fields, sugar beet fields, onion fields, cranberry bogs, and so on, to the detriment of their education. In Colorado, where the National Child Labor Committee investigated sugar beet fields last year, 5,000 children between six and sixteen years of age lose from two to twenty-two weeks of school annually working in the beet fields. "The possibility of exploitation in this field is so great as to demand thorough investigation," says the National Child Labor Committee, urging the general public to interest itself in this problem and support its investigations.

This campaign by the National Child Labor Committee is directly in line with the movement for better rural schools initiated by the United States Bureau of Education, and it is hoped that everyone interested in bettering rural conditions and in raising the educational standards in farm districts will co-operate. "How many weeks of school do the young agricultural workers in your state have?" is a question that every farmer will do well to answer.

Further information as to child labor in agriculture may be obtained from the National Child Labor Committee, 105 East 22d St., New York City.

Folding Work Basket

To the Editor:—I saw the request of one of our number for a work basket made of cretonne and mounted on legs made of broomsticks. I do not know how the one this lady referred to was made, but I have just made the frame for a folding work basket made of cretonne. I will send the dimensions of mine and perhaps it will help the lady who asked for the other kind.

I took four pieces of wood twenty-six inches long, an inch and a quarter wide and three-fourths of an inch thick. Then I took two pieces of wood an inch and a quarter wide, one-half inch thick and fourteen and three-

DIAGRAM OF FRAME BEFORE PUTTING TOGETHER.

fourths inches long; and two pieces an inch and a quarter wide, one-half inch thick and thirteen inches long. I placed them together as shown in the diagram and then with a brace and bit made holes in the four upright pieces so that a rod of wood or metal might be put through them, allowing the inner section to turn on the rod while the ends of the rod were fastened in the outside section.

The basket itself is to be made of cretonne with a plain color of cambric

THE FINISHED WORK BASKET.

for the lining. Small headed nails are driven in the crosspiece on one side to hold spools, and a needle case is fastened to the side. A loop of cretonne is fastened at the center of the two top strips by which the bag is closed when not in use. The frame is enameled or painted white.

I enjoy the Home page very much and I hope that I have made my directions plain and that someone may wish to make such a basket.

Ruth Smith.

Valentine a Wonderful Cow.

Dear Young Folks:—When I was a small girl my father said he would give me a calf to keep if I would take it and care for it. My father sold the mother of my calf when it was only five months old. I named the calf Valentine, for she was born in February. Valentine learned to come to the barnyard gate when I called her to give her corn and oats ground together. My father bought me a little Swiss bell to put around her neck. She was as proud of that bell as I was of my first doll, for she was only a little calf.

When Valentine had a fine heifer calf I was prouder of her than ever. I named her calf April. I never would let my father milk my cow, for I thought no one could do it as well as I. Valentine still comes to the barnyard gate to get her corn and oats. She got so she gave two and a half gallons of milk at a milking. If the state was full of cows like Valentine there would be enough milk to supply the whole country of Asia and we would want all the pretty milkmaids to make it sweeter. Why, I think we would have to import all the little dogs from England and all the little cats from Paris to consume the foam. Then we would make the milk into milkshake for the pretty milkmaids to treat the soldier boys. You see I like the soldiers.

When I milk my Valentine cow my pet pigeon sits on the highest point of the gate and coos and coos.

—Rosetta.

Makes Money Trapping.

Dear Young Folks:—I have always been interested in the Young Folks' corner and I wish the editor could find room for my letter.

I have done a good deal of trapping this year. I have sold over $15 worth of skunk furs. Skunks are quite numerous around the creeks where I live. I use a plain gopher trap. I usually bait the trap with a piece of rabbit meat. I nearly always set my trap by guess.

I skin them by splitting the skin on the hind legs and then pulling the fur off just like a rabbit. To stretch the skins I take a board from a cracker box and cut it the size of the skin so it will fit tight. Then I hang it out of the sun to dry. It takes from four to ten days to dry a skin properly. I think this is a good way to catch, skin and stretch skunks. I have always got pretty good prices for my skins.

I hope the boy trappers will be interested in my letter. —Peter.

Recipes.

Candied Sweet Potatoes.—Boil potatoes of uniform size, until nearly tender. Peel under cold water, slice and roll each slice, or half, in melted butter, then in sugar, and place in a buttered baking dish. When dish is full, pour over the juice of one lemon, also any sugar or butter which may be left. Put in oven and bake until glazed—about thirty minutes.

Apple Charlotte.—Cut slices of stale bread about one-fourth inch thick, then cut in small rounds; fry in hot butter to a light brown color; line a plain buttered mold with the bread rounds. Peel and core one and one-half pounds of apples; add half a cupful sugar and cook; season with half teaspoonful cinnamon and two cloves. Remove from the fire when soft, and stir in the yolks of two eggs, slightly beaten; pour into the prepared mold, cover with rounds of fried bread, bake in a moderate oven forty minutes. Serve with cream.

Cabbage Puree.—This is a dish not to be lightly considered and may well prove an addition to the repertoire of soups. Chop a small white cabbage with one onion, one stalk of celery and a tablespoon of parsley. Put to cook in boiling salted water to cover. When very soft, drain through sieve and pound to a pulp. Put over the fire in a saucepan two tablespoons of butter and when bubbling hot add two tablespoonfuls of flour, cook until smooth, add a pint of rich milk, season to taste and serve with a beaten egg added the last thing.

Quick Raisin and Nut Roll.—Three cupfuls flour, two teaspoonfuls baking powder, three-fourths teaspoonful salt, one-third cupful butter (scant), one egg beaten light, three-fourths cupful milk, one tablespoonful softened butter, one-third cupful raisins, one-third cupful nut meats, broken in pieces, two tablespoonfuls sugar, one teaspoonful cinnamon. Sift together the dry ingredients twice. Work in the shortening; beat the egg, and add part of the milk. Mix well, using more milk if needed. Turn out on a floured board and roll into a sheet about one-third of an inch thick. Spread with soft butter, sprinkle with the sugar, nut meats and raisins; roll up like a jelly roll, cut in pieces an inch and a half long; set on end close together in a well-greased pan. Bake twenty-five minutes

1569—Ladies' shirt waist, with sleeves in either of two lengths. Pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 3¼ yards of 36-inch material for a 36-inch size.

1947—Ladies' house dress with sleeve in either of two lengths. Pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46

inches bust measure. It requires 6⅞ yards of 36-inch material for a 36-inch size.

1823—Girls' dress with sleeve in either of two lengths. Pattern is cut in 4 sizes: 1, 2, 4 and 5 years. It requires 2⅜ yards of 44-inch material for a 4-year size.

1944—Girls' one-piece dress, with sleeve in either of two lengths. Pattern is cut in 4 sizes: 2, 4, 6 and 8 years. Size 8 will require 2¾ yards of 44-inch material.

1967—Ladies' combination corset cover and drawers. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 3 yards of 36-inch material for a medium size.

1963—A new and pleasing apron model. Pattern is cut in 4 sizes: 34, 38, 42 and 46 inches bust measure. Size 38 requires 5¼ yards of 36-inch material.

1948—Girls' overblouse dress, with guimpe having sleeve in either of two styles. Pattern is cut in 5 sizes: 4, 6, 8, 10 and 12 years. It requires 1¾ yards of 27-inch material for the guimpe and 3⅜ yards for the dress, for an 8-year size.

1964—Girls' one-piece dress, with sleeve in either of two lengths. Pattern is cut in 4 sizes: 8, 10, 12 and 14 years. It requires 4 yards of 44-inch material for a 12-year size.

1956—Girls' bath robe.—Pattern is cut in 6 sizes: 4, 6, 8, 10, 12 and 14 years. It requires 5 yards of 44-inch material for a 12-year size.

1971—Ladies' dress. Pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6 yards of 44-inch material for a 36-inch size.

International Sunday School Lesson.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for January 7, 1917.

Jesus the Light and Life of Men.

The studies for the first six months of this year are devoted to the gospel of John; the remaining portion of the year to II Kings, Ezra and Nehemiah, being a study with the prophets. One year from now we begin the new "graded uniform lessons" recently adopted by the reorganized international lesson committee.

John was younger than his brother, James, and lived to be the oldest of the apostles, dying somewhere between A. D. 95 and 98. His name means "Peace," though he is surnamed the "son of thunder" (Mark 3:17). Five of the New Testament books bear his name. He blended the gentleness of a dove with the force and vision of an eagle." The purpose of his gospel is clearly stated (ch. 20:31). Only about 8 per cent of it is found in the other three gospels. Seventy-six times the word "witness" is used. The word "father" occurs 140 times and the name "Jesus" 240 times.

I. The Word (vv. 1-5). Words utter thoughts; a word is an expression of an inaudible and invisible thing. As the Word, Christ is Creator (ch. 14:9; 8:19), he is the source of light. "The word is God heard; the life is God felt, and the light is God seen"—Moody. This eternally existing person is called the Word because in him God fully expresses or reveals himself. The Bible is the written word because in it God speaks and reveals himself through this person who is the eternal Word (Heb. 1:3). The first verse brings out the fact that there are at least two persons in the Godhead, the one divine person in company with whom the word was, and the word, himself, was God; that is, was also a divine person. He who by his incarnation became our brother and our savior was first our creator and the creator of all things and apart from him not anything came into existence. The Word did not become the light of men by his incarnation in Jesus of Nazareth. He was ever the Light of Men. The light that shone in the Old Testament time shone from him. When sin came, night came.

II. The Witness (vv. 6-10). John the Baptizer came for a witness. He was not the light. Some might have thought him to be the promised Messiah. This he denied. He was a lamp which held forth light to men concerning the true light "which lighteth every man that cometh into the world." He reflected light (v. 8). John told all that he knew. Testimony will expand as experience enlarges. The spoken word of man must confirm the experience of the word in our lives. John was a wonderful man, a man whom God delighted to honor, but he was a man. Men are not asked to believe blindly, but always upon an abundance of testimony.

III. The World (vv. 11-14). This world was created by Jesus, and throughout its existence he has been in the world, though the world knew him not. This living light had been coming into the world, and was not fully come until he was manifest to Israel at the baptismal act of John. In order to be made manifest the "Word was made flesh" in the person of Jesus. The world did not apprehend the light (v. 5) nor did the world which he was in and which was made by him (v. 10). Even his own people, literally his own household servants, i. e. Israel, received him not to themselves, but whoever receives him, even the vilest sinner on earth, and takes him into his heart to be all Jesus desired to be, savior, lord, teacher, friend, that instant he becomes a child of God. We cannot attempt to explain this mystery. The union of spirit and body was in one person, a simple fact; though unexplained, still true. The union of God with a human body, forming one person, Christ Jesus, sometimes spoken of separately, sometimes as a whole, sometimes as divine, sometimes as human. We cannot divide his activities into two sections and say this is divine and this is human; they are inexplicably blended into one. This Christ really dwelt among us. He did not merely appear to some persons, or come in a vision, and yet his abode among us was only temporary, only a few years, and we beheld his glory, the glory of the only begotten Son. The world expected a Messiah and his own creation, his own inheritance received him not, rejected him, opposed him, crucified him, their lord, savior, king and messiah. Those who received him and believed on his name became sons.

To be a child of God we must be born into the nature and character of God, into his spiritual life. We are members of his family.

We are heirs of all things through him, his joy, his love, his character and his blessing and the privileges of working for him and with him. We become heirs by being born of God, not of blood, physical descent nor inheritance, for the best of parents cannot bestow this gift upon their children.

More than seven and one-half tons of honey which he now has stored in his bee house is the result of a summer's work of the 200 swarms of bees owned by G. E. Capwell, of Cottonwood Falls, Kansas. The value of his honey "crop" at present market quotations is about $1,500 and the rich alfalfa fields in the Cottonwood valley and the 10,000,000 bees, more or less, which Capwell owns (for he has never yet been able to count them) did the work. But that is not all the work attached to the bee business, for while the alfalfa blossoms furnished the pollen and the bees did the work of honey making, yet Mr. Capwell has never put in a busier season than he did this year in overseeing his 10,000,000 industrious little workers; taking off full supers and replacing them with empty ones, extracting the honey and preparing it for market, besides attending to dozens of other necessary things to be found around an apiary.

DO not let your boy go to the city where he is apt to become one of the thousands of poorly paid clerks. Keep him in the country and make him a successful and independent farmer, owning his own farm and sharing an interesting community life.

Montana is the place for him. Here are millions of acres of good farm land, reasonably cheap, waiting industrious men to turn them into wealth-producing areas.

A tangible expression of faith in Montana's future, is the Electrification, by the *"St. Paul Road"* of its main line across the state at a cost of $12,000,000. This gigantic enterprise has emblazoned Montana's development before the eyes of the world and is to play an important part in the future upbuilding of the state—developing new industries, broadening the farmer's market, increasing land values and generally improving living conditions.

X-RAY INCUBATOR CO Box 43 Des Moines, Ia.

Did You Have "Good Luck" With Your Chicks?

"Luck" with chicks starts with the incubator. If it is properly heated, **properly regulated,** and properly ventilated, your chicks will start off with vitality. They won't come out of the shell **half dead.** So many people trust their eggs to a cheap machine, forgetting that it is not only how many you hatch that counts, but how many **live and grow.**

Start Your Chicks With a Queen Constitution

The Queen has a reputation for hatching **strong, healthy chicks.** It is built of genuine Redwood—very scarce in these days of cheap substitutes. Redwood does not absorb odors from the hatching eggs. Cheaper woods, and pasteboard lining in iron and tin machines, retain the odors to weaken and kill the hatching chicks.

Queen incubators are not cheap, but they are built to **hatch big hatches of chicks that live.** Book sent free.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Dry, Fresh Air For Poultry.

Keeping hens in fresh, reasonably dry air is one of the secrets of keeping them successfully. In the henhouse good ventilation and dryness are so essential that the most skillful breeding, feeding and rearing cannot make up for their lack. It is difficult to secure dryness without a generous amount of fresh air.

There has been in recent years a marked tendency in poultry house construction toward securing more fresh air, both day and night, by replacing the glass windows with cloth or muslin or by making the front either of muslin or entirely open. Fresh air is one of the prime essentials in poultry houses, and warmth secured by keeping the house shut up tightly is not as desirable at a lower temperature and some ventilation.

The front of the house should be so high that the windows or openings will allow the sun to shine well back into the interior during the winter. Burlap, unbleached muslin or lightweight duck cloth may be used for curtains in the front. This cloth should be thin enough to allow a slow circulation of air without draft.

A large amount of glass in the front of the house makes it warm during the day, but cold at night, as glass radiates heat very rapidly. Some glass, however, is helpful in providing light when the curtains are closed. Some ventilation should be given in a poultry house even on the coldest night. It is usually best secured by leaving a small window open or having muslin curtains in the house. If the house is shut up tightly without any muslin curtains in the front there is a tendency for moisture to collect in the house and condense on the rafters and other woodwork on frosty mornings.

It is not necessary to close the muslin curtains in the front of the house except in very cold or stormy weather. Hens are protected by nature with warm feathers and a high body temperature so that they are better able to withstand dry, cold air than warmer air which is damp. You can make up your mind that a hen appreciates dry, clean and sunny quarters as much in the wintertime as you do. What a hen very much dislikes is a draft, no matter how little it is. Therefore, make provisions accordingly.

During the daytime when a hen can exercise she prefers it cool, even cold, as long as it is dry and sunny and free from drafts. You can imagine how much a hen feels like working, singing, and laying in a house with clean surroundings, deep litter, dry interior, free from drafts, yet plenty of fresh air with the sun shining on her back.

She feels as though she was really living, she is comfortable and feels at home, she is happy and contented and shows her appreciation by filling the egg basket. Across from her is her companion, confined in a small, unsanitary, dark, gloomy, damp, close dungeon. She sits on the roosts most of the time, except for about a few minutes at feeding times, she is dull, sick, cast down and walks about in an indifferent way, careless as to whether she lives or not. You do not notice her digging in the litter very much, singing and walking about in a happy and contented way.

Instead she stays up on the roosts in a humped up kind of dormant way until spring comes along with its longer days and sunshine. Then all at once she sums up her spirits, starts to exercising, singing and laying. Why does she do this? Because her owner by this time sees fit to let her outside into the sunshine and fresh air. It is needless to say that before very long she starts to laying.

All your hens ask for in winter is protection on three sides, east, west and north. A hen dislikes a draft, consequently it is important that these ends be as nearly air tight as possible. Endeavor to keep the temperature of the house as uniform as possible and the result will be that your hens will be comfortable and laying throughout the winter.

Stopping a Leak in the Poultry House.

To the Editor:—Most poultrymen notice that as the crops are harvested and the cold weather approaches, rats and mice increase in numbers about their buildings. Perhaps few think much about the number of rodents and give little attention to them, except to aid the cats and dogs in their efforts to catch them, thus giving sport to the boys and girls, and sometimes the grownups, too. Little thought is given to how much grain they destroy.

Recently the writer had his attention called to a case where only a small flock of poultry was kept, but where rats to the number of over a hundred were present about the building. Traps were used to catch this number, and then new feed bins were secured to save the feed and make the keeping of the flock a paying proposition. A full-grown rat will eat and waste as much feed during a winter as a laying hen will consume. This makes good feed bins very important. Good bins not only prevent this loss, but tend to cause the rodents to look elsewhere for food. When the buildings are free from the pests, the danger from disease, which is often carried by them, is much lessened, and the safety of the young chicks is insured when they begin to hatch in the spring.

Poultry feeds are generally sold in bags that may be returned at a nominal price, which, if used properly, will purchase material for bins that will prevent waste of feeds by rodents. An excellent bin can be made from discarded oil barrels which are too leaky to be used for oil or gasoline, but which make perfectly good containers for ground mash or scratch feed. Many times these may be found in the dump piles of towns and cities. By removing one head with a cold chisel and hammering the edges smooth the barrel is ready for use. For a lid a sheet of tin may be tacked on wood or two thin boards may be nailed together with the grain of the wood at right angles. One of these may be cut a half inch larger than the other and one cut to fit the top of the barrel, then the wood covered with wire screening.

Galvanized water tanks make good containers, providing they are equipped with hinged covers. These are practically indestructible when properly cared for. The first cost is not great, and they can be obtained in sizes to suit the requirements of a small or a large flock. In addition to protection from rodents, the iron bins are a protection against dampness.

Another form of bin that can be made by most any poultryman during odd times, and also one that can be made to suit any size flock is the concrete bin. This is especially good if a permanent bin is desired. Forms may be set up about three inches apart. These forms to be in a square or rectangle to hold the desired amount of feed. Fill these forms with the following concrete mixture: One part portland cement, three parts good sand, and six parts of coarse gravel or crushed rock. When well set, the forms may be removed and the top covered with one quarter inch mesh wire netting. About two feet from one end or side a narrow board may be tacked to the concrete, or held by weights, allow the netting to be raised as a door to the bin.

WANTED TO HEAR FROM OWNER OF good farm for sale. State cash price and description. D. F. Bush, Minneapolis, Minnesota.

Law Questions.

Death of Borrowed Mare—Damages.

Mr. Ed Nickel, De Pere, Wis.—My neighbor borrowed a mare from me, and worked her at the plow for four days. On the fifth morning he found her dead. Can I recover damages from my neighbor for the loss of the mare?

Answer.—If you can prove that the death of the mare was caused by any neglect, negligence, carelessness, overwork, or any other act of your neighbor, you can recover damages from him for the loss of the mare.

Delinquent Produce Company.

A Minnesota Subscriber.—I received a quotation of poultry market prices from a produce company, and I shipped to the company a crate of chickens. The company sent me a report of the shipment, but has not sent me any pay for the chickens, nor returned the crate, although I have written them several letters, which they failed to answer. How can I get pay for the chickens?

Answer.—You will have to bring a suit against the produce company unless it pays you voluntarily. Put your claim in the hands of a lawyer or collector in the town where the produce company does business.

Wages of Carpenter and Carfare.

A Subscriber, Amherst, Wis.—I hired a carpenter to do some work at my place. He lives near a railroad station eight miles away and he came on the first train, which reached my place at noon, and went to work. Nothing was said about the amount of wages. Is he entitled to wages for the forenoon, and the amount of carfare he paid.

Answer.—The carpenter is entitled to pay for his time in going from his home to your place, and in returning to his home and also to the carfare going and coming which he paid, and reasonable pay for his work.

Exempt Property.

A Subscriber, Sheboygan, Wis.—What amount of property does the law of Wisconsin allow a resident of that state to hold exempt from the payment of debts?

Answer.—A homestead of forty acres and house in the country, or a quarter acre and house in town and earnings of head of family for three months. Also a great number and variety of articles of personal property, enumerated on pages 2083 to 2086 of the Wisconsin statutes of 1898, which can be found in the office of any lawyer or justice of the peace. The description is too long to be published in these columns.

Lawful Fences in Minnesota.

A Subscriber, Wheaton, Minn.—What is a lawful fence in the state of Minnesota, when made of posts and wire?

Answer.—First, thirty-two-inch woven wire and two barbed wires, the first barbed wire four inches above the woven wire and the second barbed wire eight inches above the first. Or, second, forty-inch woven wire and one barbed wire four inches above it. Or, third, forty-eight-inch woven wire without any barbed wire. Or, fourth, four barbed wires of forty barbs to the rod, the top wire forty-eight inches high and the bottom wire from twelve to sixteen inches from the ground. In all such fences the wires must be firmly fastened to well-set posts not more than one rod apart.

Care and Oversight of the Poor.

A Subscriber, Wausaukee, Wis.—A is the chairman of a township board, but is not a freeholder or a taxpayer. A, while out hunting, shot B's boy and the boy had to be taken to a hospital for treatment. B is a poor man and cannot pay the hospital bill. Can A be compelled to pay said bill, or would it have to be paid by the township?

Answer.—A cannot be personally compelled to pay the hospital bill; but if the shooting was negligent, A is liable to the boy or the boy's father for damages, which would much more than cover the hospital bill. The supervisors of the town have the care and oversight of the poor who reside in the town, and it is their duty to relieve and take care of them properly. In this case the town is bound to furnish relief if the boy's father is poor and cannot do so.

A Few Hundred Dollars WILL buy you a piece of wild land in Minnesota or a few thousand dollars will buy you a good improved farm in Minnesota. Maps and literature sent free. Fred D. Sherman, Commissioner of Immigration, Room 200, State Capitol, St. Paul, Minn.

COMING TO TEXAS? I'll save you money and locate you where you will make good. Write today. W. W. Miller, Cattlemen's Exchange, San Antonio, Texas.

It's mighty poor economy to buy a good car and keep it knocking around the place without a home of its own

Build a Garage

Your car is an investment worth protecting, and a garage of "Old Faithful" HEMLOCK is the way to protect it. Keep the car by itself where it won't get damaged; where greasy rags, gasoline and other inflammable things are out of harm's way, and where you have a place with everything handy when you have a job of engine-tinkering or cleaning to do. *A garage built of*

"Old Faithful" HEMLOCK Lumber

will cost mighty little, and we shall be glad to supply the plans free so you may learn by experience the good points of the farmer's standby lumber. HEMLOCK is economical, lasting, light and pitchless.

PLANS FREE: Send for the "Old Faithful" HEMLOCK Booklet (just out) which shows pictures of garages as well as farm houses, town houses, barns, and other farm buildings for which we furnish free plans drawn by well-known architects, and include complete specifications and all practical details. If you are handy with tools you can build from them yourself. The book contains a COUPON GOOD FOR ANY TWO SETS OF PLANS FREE when presented to YOUR LOCAL LUMBER DEALER. He has the plans or can get them from us for you. We'll be glad to give you any advice or information we can. Just write

THE HEMLOCK MANUFACTURERS
(of Wisconsin and Northern Michigan)
300 F. R. A. BUILDING Oshkosh, Wisconsin

If your lumber dealer cannot supply plans, we will send them direct for 50c for garage or outbuilding, $1.00 for house or barn.

Canadian Farmers Profit From Wheat

The war's devastation of European crops has caused an unusual demand for grain from the American Continent. The people of the world must be fed and wheat near $2 a bushel offers great profits to the farmer. Canada's invitation is therefore especially attractive. She wants settlers to make money and happy, prosperous homes for themselves by helping her raise immense wheat crops.

You can get a Homestead of 160 acres FREE and other lands at remarkably low prices. During many years Canadian wheat fields have averaged 20 bushels to the acre—many yields as high as 45 bushels to acre. Wonderful crops also of **Oats, Barley and Flax.**

Mixed farming as profitable an industry as grain raising. The excellent grasses full of nutrition are the only food required for beef or dairy purposes. Good schools, churches, markets convenient, climate excellent.

Military service is not compulsory in Canada, but there is an extra demand for farm labor to replace the many young men who have volunteered for the war. The Government is urging farmers to put extra acreage into grain. Write for literature and particulars as to reduced railway rates to Supt. of Immigration, Ottawa, Canada, or

Geo. A. Hall,
123 2d St., Milwaukee, Wis. Canadian Gov't Agt.

Stock Farms FREE

The Southeastern Land Show, to be held in Atlanta, February 1-15, 1917, is planning the distribution of about 100 stock farms to those making application for same while in attendance at the Land Show. The farms will contain from ten to 100 acres in each tract and will represent a money value of from $1,000 to $10,000. Full particulars will be furnished anyone desiring same upon application to the

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

Ailing Animals.

Necrobacillosis in Pigs.

Please tell me what makes big lumps on pigs' jaws. We have some pigs that have these lumps on their jaws. We have tried different remedies, but have found nothing that helps them.

This is one form of sniffles in pigs and very little, if anything, can be done for them.

Rough Skin.

I would like your advice about a sick calf. This calf has a thick, dry scurvy skin on neck and all along back. It is very poor but seems to eat with a relish. Last spring he was terribly lousy and I tried different things and finally finished up on sheep dip, which did away with the lice. Would the sheep dip leave his hide in such shape? I tried to curry off his hide but I have to scratch hard to make any impression on it and then it bleeds. I feed him warm slop in the morning and all the nice second crop clover he wants.

This calf needs a general tonic and the very best of food. Give this calf two teaspoonfuls of Fowler's Solution of Arsenic in its soft feed once daily. Do not curry the rough skin, but use a brush and brush the parts gently once daily.

Eye Disturbance.

In August I had a cow that had sore eyes and went blind in about two months, dwindled and died. Her calf sucked her about all the time and did not seem to contract anything. About a week ago my best cow took the same way in one eye. I thought it might be pink eye, but it seems to be too slow, as none of the rest of the herd takes it.

You should have this herd examined by a competent veterinarian before any more animals become affected. There may be something in your herd that is slightly affected. The trouble with the eye has probably come through some general disturbance.

Ailing Cow.

I have a cow on my farm that has been sick for about three months. Some of my neighbors think it is pink eye. When she first took sick she would stand and keep turning her head from one side to the other, then later on she commenced to get blind and very thin in flesh. She always has a pretty good appetite. Some days she seems to be almost well, then again she is so bad that she hardly gets up, and she cannot see anything.

We would not attempt diagnosis without more symptoms. It might be possible there is some digestive disturbance, but it may be far more serious. It might pay you to get a veterinarian to look her over.

Unthriftiness in Horse.

Will you tell me what I can do for my horse? He is twelve years old. He is very thin and will not pick up. He has worms and I have been giving him worm medicine, but it does not seem to help him. He passes small blue worms. His teeth are in good shape.

First, give this animal two or three parts of oil of turpentine in a pint of linseed oil. Then start with a tonic composed of the following: Powdered cinchona, four and one-half ounces; dried iron sulphate, one and one-half ounces; powdered nux vomica, one and one-half ounces; powdered fennel, one ounce. Have this mixed by your druggist and give a heaping tablespoonful in feed three times daily. You will probably have to get this amount put up three or four times.

Sniffles in Pigs (Necrotic Rhinitis).

I would like some information as to cause and cure of a peculiar ailment of some of my pigs. Their noses swell up, some being sore, with considerable catarrhal discharge. Gradually they became snubnosed or bull dog effect, with lower jaw usually protruding a little and almost always the nose twisted more or less to one side, sometimes to a very marked degree, giving them a very odd appearance. Unless the catarrhal discharge stops they become quite runty, but a few with no discharge but with very marked twist to nose do pretty well. About one-eighth of my pigs are more or less affected. My nearest neighbor has the same trouble. Our pigs are of good quality.

It is not possible to efficiently treat these cases because of difficulty of applying medicaments to the lesion and further because of the destructive changes in the bones of the nose and face.

Dysentery.

Last fall my Short-horn bull took the scours and became very thin, whereupon I proceeded to doctor him. To get him back in condition was a hard job, so I decided to turn him in the feed lot and ship him along with the steers last June. He was in fine condition when I shipped my last load of steers, but I had no room for him in the car. I did not care, as I thought he was all over his trouble. I turned him on pasture and gave him a light feed of grain twice a day all summer, but he took the scours again soon after I turned him on grass. I did not doctor him after that. He is in the feed lot at present and can get all the hay and corn and corn fodder he wants, but he is too thin and poor to make a good shadow. Can I get this animal back in condition? If not, his hide is the most valuable part of him.

Your bull is probably troubled with dysentery, a severe form of diarrhea. It is probable it would take careful treatment to do him any good and this may even be impossible. What is causing the trouble is a question, as there are so many causes for a severe diarrhea. You might try giving a pint of linseed or castor oil and then give the following: Salol, two ounce, and water to make sixteen ounces. Mix and give two tablespoonfuls in a pint of warm water three times daily. Feed just moderately of good wholesome feed and give a less amount of water than usual.

Indigestion.

We had thirteen pigs about ten weeks old that were running with the mother and had milk and corn all the time. They were on an alfalfa pasture which had not been cut the last cutting but had gone to seed and been allowed to fall off. They had a good range. One morning when they came to drink milk I noticed one began to rear up and have fits. Then it fell over like it was in severe pain and lay like it was dead. It came to again but died that day. I lost seven the same way. There did not seem to be anything wrong with them until they were suddenly taken. I opened several but found everything all right except the bladder was all blood shot and their eyes were full of blood when they died. I penned the rest up in a dry pen and fed slop and grain and gave a few doses of a stock tonic and have not lost any more. They seem to be doing fine now. What do you think ailed them?

Your pigs were probably victims of severe indigestion from something they had eaten. The change of feed was the right move to make.

The Dreaded Scours Lead Direct to Calf Cholera

The digestive organs are paralyzed; food lies in an undigested mass in the stomach; it sours and ferments and decomposes. Do you wonder that so many calves die in a few hours after cholera strikes?

Dr. David Roberts' CALF CHOLERA REMEDY

overcomes the trouble by righting the digestive organs. It regulates the flow of gastric juice and soothes and heals the sore mucous membrane. It liquefies the poisonous gases already formed in the stomach and prevents fermentation. Digestion becomes normal and the disease is ended. Don't let the trouble go too far. Begin with Calf Cholera Remedy right away when scours appear. The disease is contagious.

Dr. David Roberts' Laxotonic

Removes all risk of improper treatment of live stock for stoppage of the bowels Three out of four cases of stoppage of the bowels are due to paralysis of the bowels. This is caused by partial or complete paralysis of the digestive organs. The food and contents of the bowels lie dormant, decomposition sets in and gives off a poisonous gas The result is that the animals show high fever, sunken eyes, loss of appetite and a gradual wasting away until finally death comes. Dr. David Roberts' Laxotonic relieves the paralytic condition of the digestive organs, moves the rapidly decomposing matter along and opens the bowels.

Cow Cleaner helps cows at calving time. Cleans and removes the afterbirth naturally; leaves organs in healthy breeding condition. Use *Antiseptic* to soothe and heal soreness of the genital organs.

Cow Tonic aids digestion, tones and conditions the cow system, keeps up appetite and prevents falling off of milk.

Breeding Tonic prepares and conditions for breeding. Calves are dropped naturally, complications are avoided. Use also for other animals.

Calf Meal, Diolice, Badger Balm, Laxotonic and Stokvigor are other Dr. Roberts' Prescriptions which mean better live stock.

Get Dr. Roberts' Live Stock Prescriptions at your drug store—nearly 4000 dealers in United States. Don't take anything but the package that has Dr. Roberts' picture right on the front. If you do not have Dr. Roberts' 184-page "Practical Home Veterinarian," treating all diseases of all live stock, enclose $1.00 and receive copy by mail. Address

HIDES AND FURS.

A New Way to Grade Furs

We have created a new system for grading furs. One that will protect you. No one man can grade furs rightly at all times. So we have established a commission of three fur experts who have done nothing but judge furs for years. They will grade all furs you send us and price them according to the highest market reports.

We are the largest firm in our line in America. We have large markets to supply. We have to protect your interests if we are to get a good, steady supply of pelts. That is why we established this commission. To protect you. To protect the fur business. It was simply good business. For we make more in the end by paying *you* more. We want high-grade pelts, and we are helping trappers to get them by our free premium system—equip all trappers who trade with us.

FREE TO HUNTERS AND TRAPPERS—AUTOMATIC REVOLVERS, GUNS, TRAPS, etc.—who join our co-operative plan. So don't be tempted to sell furs elsewhere until you read the particulars of this plan. We believe it will make a big year for you if you take advantage of it. Write for our Fur Club News, Fur Market Reports, Premium List, and List of Prices. All of these will be mailed to you free, upon request.

Minnesota Grange Meeting.

To the Editor:—New Year's greetings to The Wisconsin Farmer, and many of them. The forty-eighth annual meeting of the Minnesota State Grange was held at the University Farm School in the engineering building December 12th and 13th. Nearly every grange in the state was represented. On the first day we were invited in a body to the assembly hall. The officers were escorted by the principal, D. D. Mayne, to the platform. There our worthy state master, Bro. Chas. Rice, of Austin, Minn., addressed the audience, his topic being "Grange Work as Carried on in Minnesota." Brother McKaig, master of the North Dakota grange, scented us out by a notice in one of the Minneapolis dailies that we were in session at the University Farm. He was traveling through the state and had to change cars. He gave us a splendid address on what North Dakota had done in a legislative way by the farmers combining together.

It was voted to use $250 for extension work during the coming year; also to have a three days' session after this in place of two.

The master's annual address was largely on rural credits, co-operation, extension work, home economics, prohibition. During the meeting the lecturers of the different granges held a conference of their own.

The dean of the college addressed us on "Ten Questions Asked the College by Business Men." These questions are now in pamphlet form and are well worth reading, with their answers. C. P. Bull, professor of agronomy, also gave us a fine talk on pure seed.

We were very fortunate in being able to both eat and sleep on the grounds. The dean left no stone unturned to make us comfortable.

This year was the election of officers. I will make mention of but four, there being thirteen all told. Master, Chas. Rice, Austin; overseer, Chris Reinhard, Medford; lecturer, Geo. Brush, Owatonna; secretary, L. L. Hockett, Austin. The reports of the subordinate granges were very good. Three, I feel, are worthy of mention. One grange met together on Thanksgiving day and had dinner, another bought a canning outfit for their people, which was a great success, and still another bought 40,000 pounds (two carloads) of twine from our state twine exhibition and have an order ready for 45,000 pounds more. We advocate using state-prison-made goods. Why not? We certainly help to pay the taxes.

George H. R. Brush,
Lec. Minn. State Grange.

Fond du Lac County Orchard Report.

Report has been made by R. H. Roberts, of the college of agriculture, horticulture department, on spraying of fruit trees at the Thomas Rhodes farm in Fond du Lac county. The apple crop was recently sold off the Rhodes farm, so that the production of the sprayed trees and the unsprayed trees might be compared as to their value. Eighty-five per cent of the fruit grown by the sprayed trees was first grade, while none of the fruit produced by the unsprayed trees was first grade. The net gain per bushel for spraying was 74 cents. In this report Mr. Roberts says:

Regarding the report of our spraying results at the Thomas Roach farm the fruit has but lately been sold so that we could definitely sum up our results.

From the trees which we helped Mr. Roach to spray we obtained 85 per cent of the first grade fruit, 12 per cent of second grade, and 3 per cent culls, which sold at an average price of $1.14 per bushel. From the trees which were unsprayed, there was no first-grade fruit, but 37 per cent was second grade, the balance or 63 per cent being culls.

The average price for this fruit was 24 cents a bushel. It is also to be noted that the unsprayed trees had a smaller crop than the others, due to smaller-sized fruits and the dropping of a large per cent of the crop due to apple scab. On the basis mentioned, however, we would have the gain of 90 cents per bushel, due to spraying. The cost, including labor and material, was 16 cents a bushel or a net gain of 74 cents. The cost per bushel was high owing to a light yield, as the cost per tree was about 24 cents. These figures apply to the variety, Gano.

These results are due almost entirely to the spraying which Mr. Roach did while we were not present, as our spray plat included, but a small portion of the trees on which we gathered these data. The season gave one of the worst infections of apple scab that has been known, so we feel quite pleased with the results which we have obtained this year and feel confident that these can be duplicated by any farmer who follows carefully the time of application and the use of proper materials.

The spray used this year was the commercial lime sulphur solution, one gallon to forty gallons of water, to which was added one and one-half pounds of powdered arsenate of lead to each fifty gallons of water.

The applications were made as follows:

(1) Just after the blossom buds separated in the cluster so as to permit the covering of their entire surfaces. This was just previous to the blossoms opening. (2) Just after the blossoms fell. (3) Two weeks after the second spray. (4) About the first of August.

Study Your Fruit Diseases.

The federal department of agriculture has been making an exhaustive study of deciduous tree fruit. One subject of importance to Wisconsin is cedar rust on apples. Observations in the Eastern Appalachian mountains show that complete or partial eradication of cedar trees in the vicinity of apple orchards has completely solved the problem of cedar rust. There are quite a few communities in Wisconsin where the red cedars must be eradicated to protect the apple crop. The government has conducted practical field tests or methods of control of apple bitter rot. The report says that removal of cankers and diseased fruit supplemented by spraying reduced damage by these diseases to 2 per cent on early varieties and 1 per cent on late varieties. The orchard in which these field tests were conducted had previously been sprayed, but lost 10 to 25 per cent of the fruit each year. Adjacent orchards which had not been sprayed lost about 50 per cent on early varieties and 25 per cent on late varieties.

DON'T BUY AN ENGINE BLINDFOLDED!

"You are the judge or jury. Here are the facts."
—Wm. Galloway.

KNOW THE FACTS BEFORE YOU BUY!

My new 1917 book tells you the truth about heavy weight engines, about light weight engines, about four cycle engines, about two cycle engines, about high speed engines, about engines built to sell for a price—and about Galloway Masterpiece engines built **in our own factories** right here in Waterloo by Master engine designers and builders—their **heavy weight, large bore** and **long stroke**, low speed and genuine inbuilt durability and perfect service. My book gives bore, stroke, speed (RPM) and weight of every engine we manufacture.

All sizes, all styles at lowest prices. My 1917 model is a mechanical masterpiece from which it gets its name. It is a master-stroke in engine designing and building. Superior material, skilled workmanship, every part standardized, interchangeable and alike make it the peer of all engines on the market. Develops way above rated h. p.

The points mentioned in my engine talk No. 2 are only a few of its superior features. Large, heavy flywheels, Webster oscillating magneto supplies blue hot spark, needs no batteries. Make and break ignition, never misses fire, easily started, no cranking. Cylinder and water pot frost proof. Compare this 1917 Galloway Masterpiece engine size for size, bore, stroke, weight and low speed (which means easy running and long, satisfactory service), with any engine that is made anywhere, then be your own judge. Galloway engines are honestly rated, scientifically, accurately, handsomely built. Thousands of users testify to truth of my assertions. The Galloway Engine line is the finest, most complete, biggest value for the money on the market.

AW-4

GALLOWAY'S ENGINE TALK NO. 2

1. **Valves in the Head.** Built like the modern automobile motor. Large intake valve means ample charge of gas and perfect combustion. Large exhaust valve means perfect cleaning of cylinder for next charge. No gasoline waste. No lost power. All burnt gases quickly driven out of cylinder after explosion. Automobile-ground valves insure perfect compression.

2. **Arch-of-Strength Cylinder Head.** Positively cannot blow off. Held by steel studs—nuts perfectly seated. Perfectly machined, makes absolutely tight joint with end of cylinder. All Galloway engines from 4 h. p. up are water jacketed. Water circulates freely around valves and valve stems. This type cylinder head provides nearly double amount of water space found on other styles. Valves always cool. Cannot warp out of shape.

3. **Economy Carburetor.** Worth $15 more on any engine. Costs nothing extra on a Galloway. Cuts down fuel bills. Simple, positive and effective air valve adjustment—regulated at will—makes easy starting engine in any weather. Supplies perfect charge. Makes gasoline most satisfactory and cheapest fuel.

4. **Galloway Make and Break Sure-fire Igniter.** Our own design. No trouble. Never misses fire on batteries or magneto. Unaffected by heat or cold. Thousands in continuous operation for years without replacing igniter points. Gives least trouble from soot or carbon of any type we ever tried.

Note the big valves

Saw Rigs, Pumping Outfits, Grinders

All Sizes Every Style Stationary and Portable

Get This Free Book!

I want you to have this new book about Galloway Masterpiece engines. It tells you how to pick out, size up and judge an engine. Gives you engine secrets and facts. Tells why to insist on heavy weight, large bore, long stroke and low speed. Tells why we sell direct to farm or shop at wholesale. How to install an engine and hook up machinery. How Galloway engines are built. How to lay out and build a cheap, efficient power house. Why our prices on high-class portable and stationary engines, saw rigs and grinding outfits are so low considering quality. This book will guide you to a saving of $250 or even more in fitting up a farm power house. That's why I want you to get it. Ask today. A postal gets it.

I MAKE IT EASY FOR YOU TO BUY A GOOD ENGINE. SIX LIBERAL SELLING PLANS—CASH OR TIME.

In addition to making the lowest prices a GOOD engine can be sold for, I allow you your choice of SIX LIBERAL SELLING PLANS--which include every possible plan or terms of payment you could possibly ask for--practically YOUR OWN TERMS.

My NEW BOOK gives you complete information--get the book to-day--select the engine you want--choose the plan you want to buy ON--CASH--PART CASH--PART NOTE--ALL NOTE--INSTALLMENT--BANK DEPOSIT, etc., and I'll ship the engine at once. Besides, I will allow you to

TRY A GALLOWAY ENGINE ON ACTUAL POWER TEST WITHOUT EXPENSE TO YOU!

Free power test to satisfy yourself arranged if you desire. Our engines must prove to you in your own hands, you to be the sole judge, whether or not they actually do everything we claim for them. My engine must stand on its merits. If you like it keep it—if it is not satisfactory, fire it back to me and I'll PAY FREIGHT BOTH WAYS. Could any offer be more fair, more square, more liberal? It's simply a case of

YOUR MONEY BACK IF IT ISN'T THE BIGGEST ENGINE VALUE YOU EVER SAW!

Compare my engine with ANY ENGINE ON EARTH, whether it costs more or less. If you pay less for an engine than for a Galloway Masterpiece you could NOT POSSIBLY be getting as good an engine. If you pay more it would only be PAYING TOO MUCH. No matter what size or style engine you want I BUILD THEM here in Waterloo in my own great chain of factories to fill every WANT. My 1 3-4, 2 1-4, 4 h. p. and other sizes are just as SCIENTIFICALLY DESIGNED, BUILT, MACHINED and FINISHED as my mogul engines from 12 to 16 h. p. What better proposition can you get anywhere? My engines are the best that can be designed, built of finest materials that can be procured. Sold at prices that barely cover actual cost or ONE small profit.

Grinding Outfits of Every Capacity

This big book prices and describes power and sweep mills of every kind and style. Also lists all kinds of farm machinery. Ask for it today.

My $25,000 Bond PROTECTS YOU!

and every one of my customers and proves my willingness to have EVERY CLAIM and statement I make FULLY INVESTIGATED. I want you to TRY a Galloway engine on your farm--in your own shop. That's why I prepared my new 1917 special proposition. I want a Galloway Masterpiece 1917 model gas, kerosene or distillate engine in EVERY TOWNSHIP between NOW and APRIL 1st. Write me personally--now--today. I'll see that you get my wonderful book by return mail. You'll learn the truth about engines if you'll only let me tell you.

Live Stock and Commercial Notes.

Gathered by Representatives of The Wisconsin Farmer.

An Opportunity to Buy Bred Durocs.

WE sincerely believe that good registered sows are going to command a good figure the coming spring and especially later in the season, for that reason we believe that the buyers that make their selections early will derive the benefit. Riley Martiny & Son, Baraboo, Wis., have one of the good Duroc Jersey herds of the state and for a short time they will offer yearlings and spring gilts for sale at very reasonable prices. Their Durocs have size and quality and inasmuch as the writer was on their farm when the "culling" took place we are glad to say that the gilts and sows retained for the trade are of a meritorious character. This firm has recently added an outstanding boar to their herd. He is sired by King Royal, he a son of the champion, Royal King by Orion Cherry King. The dam is by the champion, Volunteer. This is one of the best prospects for a show boar that we have seen. Some of the best sows have been bred to this boar. Others are safe in pig to a son of the champion, Lee's Defender. This boar represents the blood of Defender, Crimson Wonder Again and Golden Model 2d. Two Guernsey bulls of serviceable age are also being offered for sale. One is imported and the other one is a son of George Washington of the Fairfield Farms. Write the above firm, we gladly recommend their stock. Please mention The Wisconsin Farmer. See page 23.—Adv.

E. W. Hendricks' Sale Offering.

WHEN February 14th is at hand the Poland China breeders of the state will have a feast for their eyes if they attend the sale of E. W. Hendricks, at Hazel Green, Wis. It has been some time since the writer has seen thirty better gilts than have been listed for this sale. We did not get to see the offering Ed had last year, but those that did say that this is a better bunch, so some of you will know what to expect. They have been bred for early farrow to two boars and in our estimation we believe that two of the best boars in the state are in this herd. Black Jumbo needs no introduction at this time; he is conceded to be one of the best sires in the state. The sows not sired by him have been bred to him. Those sired by Black Jumbo have been bred to Model Major 2d. We consider the latter boar the best of his age in the state. You can pass your judgment on him sale day at which time we believe you'll want a sow bred to him.—Adv.

The Poland Chinas For Madison.

AT this time it looks like an "even break" between the two breed associations that hold sales during swine week at Madison. We have recently seen some twenty head of Poland Chinas that are going in this sale and if the remainder of the sale offering is as good as the twenty we saw it will be the greatest lot of Poland Chinas that ever entered a sale ring. The interest being taken in these sales is remarkable and we have no doubt but what they are going to be a grand success. The catalogs are now in the hands of the printer and every man in the state that is interested in the Poland China should have one. Send your name and address to any one of the following breeders, who have charge of the mailing: J. F. Diley, Rush Lake; Rob't Smiley, Albany, and Burlie Dobson, Lancaster.—Adv.

Of Interest To You.

NOW is when the whole family will appreciate the use of an indoor toilet. They are very reasonable in price and furnish the convenience and comfort of a modern home at an extremely low cost. Every home not using a modern bath room should have one of these sanitary, odorless indoor toilets sent at once. It is a necessity for old or invalids and worth many times its price in convenience to the entire family. For particulars address Kawnear Cabinet Co., 705 Kawnear Bldg., Kansas City, Mo. See advertisement on page 6.—Adv.

Relative to the Grant County Sale.

WE HAVE just called on the men that will consign Poland Chinas to the Grant county sale, February 13th, and we will make the statement now that gilts will be sold in this sale that will compare favorably with any to be sold in the state. Frank Morehouse will have some in the sale as good as ever entered a sale ring. They now weigh over 300 pounds. Dobson & Eastman will have their usual high-class consignment. Frank Renalde will sell a few that will weigh around 375 pounds by sale day, and with the good gilts consigned by Mr. Flesch you can figure on a real sale offering.—Adv.

Shekletons' Stallions.

FRANK P. SHEKLETON & SONS, Lawler, Iowa, write as follows, under recent date: The horse business with us this fall has been good and inquiries are commencing to come in from all over the country for ton stallions. We expect a big business through the coming winter months, and have now on hand more ton stallions than we ever owned at one time before. We can show ten two-year-old black and dark gray Percheron stallions that weigh ten tons and they have the conformation and the right kind of bone to carry their immense weight. Our older Percheron stallions are a grand lot and should appeal to the most critical. In Belgians we offer imported four and five-year-old stallions, some of them good enough to go into any show ring, these together with our American-bred stallions weighing up to 2,300 makes one of the strongest collections of Belgians stallions in the state. Within the past two months we have sold to Arnold Lenth, of Farmersburg, Iowa, a four-year-old Percheron stallion. Kellering Bros., Goldfield, Iowa, took a good two-year-old Percheron stallion. Carl Jordan, of Beach, N. D., purchased a dark gray two-year-old Percheron stallion to breed to his full-blooded mares. C. T. Pisek, of Ole, Mont., took a six-year-old Belgian stallion. M. P. Simard, of Syndey, Mont., purchased a five-year-old Percheron. Byron C. Hill, of Glasgow, Mont., who is esablishing a herd of full-blooded mares purchased a grandson of Besique to head his herd. To Pat Sisk, of Baylor, Mont., we sold a good three-year-old dark gray Percheron. John Casey, of Opheim, Mont., was the buyer of a first-class five-year-old Belgian stallion. John Montague, of Tampico, Mont., purchased a black four-year-old Percheron stallion. To Chris Bulmer, St. Paul Park, Minn., we sold a four-year-old Belgian stallion. Now is the time to buy your stallion. You have a larger bunch to select from and can get your choice. The early bird catches the worm. Write us for prices and description." See page 21.—Adv.

Staude Mak-a-Tractor.

A RECENT invention, enables the farmer to solve the problems of economical plowing, preparation of seed beds and harvesting on small farms, by converting his Ford car into a dependable tractor, guaranteed to do the work of four horses, with greater efficiency and at a decided saving. It is the Staude Mak-a-Tractor. The Mak-a-Tractor was designed to meet the needs of the farmers with small farms of a quarter section or less, who cannot afford the more expensive labor-saving machinery of present-day farming. The Mak-a-Tractor can be attached to the car, or removed from it in twenty minutes, and does not injure the car. The advertisement on page 24 tells more about this economical invention which is doing so much for the small farmer. Readers of this paper who are interested may obtain a copy of the big illustrated free book "Reaping a Golden Harvest," by writing to the manufacturers of the Mak-a-Tractor, the E. G. Staude Manufacturing Co., 2669 West University Avenue, St. Paul, Minn. Be sure to mention that you read the advertisement in this paper.—Adv.

The Madison Duroc Sale.

FROM the present outlook here is going to be some sale of Duroc Jersey sows at Madison, February 7th. Some of the breeders that promised entries for his sale have failed to send them in, but others were secured, so we can advise our readers that there will be fifty head in the sale as promised. The writer has seen several of the sows that are going in this sale and we are glad to say that in many instances, the best individuals in the herd have been listed. Swine week at Madison is going to be a grand success. Tell all your friends to "meet me during swine week at Madison." The catalogs for the Duroc Jersey sale is now in the hands of the printer and should be ready for mailing about the 10th of January. If you want a catalog, send your name to J. D. Grant, Delavan; John L. Fisher, Janesville, or L. F. Atwater, Bangor, and they will see that you get your copy.—Adv.

Dunbar's Holstein Dispersion.

THE dispersion of Harry Dunbar's fine herd of Holstein cattle will be held Tuesday, January 30th, at Elkhorn, Wis. This herd has become well known to lovers of the breed by the winnings at the leading fairs throughout the state, including the state fair. It is a herd of more than the usual quality both in type and in production. Watch next week's issue for the announcement advertisement and the two following issues for larger advertisements descriptive of the offering.—Adv.

JERSEY CATTLE.

Fewacres Farm's Jerseys

ARE heavy producers. Irene's Cherry 285828, a senior two year old, just completed a world's record of 12,571.6 pounds milk and 753,629 pounds butter fat. Write us about our young bulls for sale. Pedigrees and further description on request.

FEWACRES FARM - - - WAUWATOSA, WIS.
FRED D. UNDERWOOD, Prop. A. M. SERSTED, Supt. Cattle

OAK GROVE JERSEY FARM

WE are pricing our young bulls very low as we are crowded for calf stable room and have 22 cows to freshen. We are offering two sired by **OAK GROVE NOBLE LAD 122654, a grandson of Eminent and Noble of Oaklands.**

No. 1—Born Feb. 9, 1916. Out of **Volunteer's Sally**, that made 597 lbs. butter. Her daughter made 594 lbs. butter as a 2 year old and holds state record for her age. **Price $100.** Send for extended pedigree.

No. 2—Born Dec. 18, 1915. Out of **Koffee of Oak Grove**, in 305 days made 413.8 lbs. butter. She finishes her record Dec. 21st as a 2 year old. This bull won 1st at the Elkhorn fair. **Price $75.** Send for extended pedigree.

WM. KNIGHT - - - EAGLE, WIS.

JERSEYS

100 FEMALES in my herd, imported and American bred. Young bulls for sale from Advanced Registry dams. I can please you. Write
FRED STUBLEY BLACK EARTH, WIS

Dairymen! —The Truth

You may be prejudiced against the Jersey because you don't know her. Look her up. She's the *Money Cow.*

Get This Book—a history of the breed and full of very interesting tests and facts. It proves conclusively that for pure dairy type, economy of production, richness of milk, long life and adaptability to feeds and climates—all these combined—she stands way above them all. This book "About Jersey Cattle" is free. Get your copy now. You'll find it mighty good reading.

HORSES.

PROPRIETORS OF THE WHITE CITY STOCK FARM.

WE have never offered to our trade a more superior lot of Percheron and Belgian stallions, in both imported and American bred stock, than we can now show. Our imported horses are young and thoroughly acclimated, many of them having made seasons in 1915 and 1916 and are tried and tested sires. Our American bred horses were selected from the best breeders in America and are out of noted sires and dams and are horses of great quality in every respect. We have especially selected ten black and dark gray 2 and 3 year old Percheron stallions weighing 10 tons. These are all outstanding horses and should be purchased by those who need a sire for full-blooded mares. Among them is Coco, 1st prize 2 year old and reserve champion at the Wis. State Fair. This colt is black in color and weighs a ton. To the early buyer we offer one of the greatest collections of ton stallions to be seen in any importing barn this winter. We have no old, worn out, picked over stallions on hand. Let us know your wants, or better still, come and spend a day or two. A hearty welcome awaits you. Send 25 cents in stamps for large horse hanger, which shows the picture of a number of stallions now on hand, our main farm and sales stable and our firm's picture. Will sell several of our choice Iowa farms on easy terms.
FRANK P. SHEKLETON & SONS LAWLER, CHICKASAW CO., IOWA
We are 50 miles west of Prairie du Chien, Wis., on the Milwaukee R. R., making direct connections for Lawler.

A 31.02 POUND BULL FOR SALE

RACINE JOHANNA PIEBE MERCEDES 188460. Born December 8, 1915. Well marked, of excellent conformation and well grown. His dam, **Ella Mercedes of Elm Court,** made **31.02 pounds butter** in seven days; **130.47** in thirty days and **829.78** in a year. She is a big cow weighing over 1,600 pounds; her dam weighs over 1,700. His sire, **Racine Sir Johanna Piebe,** is a show bull. His dam is a show cow and weighs close to 1,600 pounds. In seven days she made 24.49 and 808.82 pounds butter in a year. Send for his complete pedigree and picture. **Large size, good, straight type** and **heavy production ability** have been bred into this bull for generations. Come to our farm and see his dam, grandam and sisters. They are the type you will want in your calves. Am also offering a straight, well-grown heifer, born May 15, 1916, out of Lady Johanna of Elm Court, a half sister to Colantha Piebe of Elm Court; calf is sired by Count of the Pontiacs.

Reuben Klofanda R. 1, Racine, Wis.

WELL GROWN, WELL MARKED HOLSTEIN BULL

BORN December 1, 1915. Ready for immediate service. Sire, Crown Pontiac Korndyke, a richly bred son of Pontiac Butter Boy, that has 59 A. R. O. daughters, 4 above 30 pounds, and that is a half brother of Hengerveld De Kol and out of the same dam as Pontiac Clothilde De Kol. Dam, Stellaris Burke Pontiac 3d 255567, a big, roomy heifer with a fine large udder and good teats. She will be [illegible] when she freshens again. Her dam is a 24.44-pound granddaughter of Hengerveld De[illegible]pe and high production have been bred into him in every line of his pedigree. Buy [illegible] soon be worth twice what we ask now. Send for pedigree. Address

[illegible]ON FARMS RACINE, WISCONSIN

A Richly Bred Aaltje Salo Bull

BORN February 28, 1915. **Ready for immediate service.** His dam, Aaltje Salo Netherland Mechthilde 78488, as a five year old made 23.35 pounds butter in seven days, 38 days after calving. She comes from a long line of heavy-producing ancestors. She not only has inherited this heavy-producing ability, but also transmits it. She has three A. R. O. daughters, one with a record of 28.63 pounds butter as a four year old. Her grandam, Aaltje Salo 5th's Netherland, has eight A. R. O. daughters holding the world's record for five years. The sire of the bull for sale is the 27-pound bull, DAISY JOHANNA 5TH, 1st prize two year old at the Wisconsin State Fair. Address

ARTHUR RUST WEST ALLIS, WISCONSIN

HOLSTEIN-FRIESIAN CATTLE.

HEAD YOUR HERD WITH A WINNER

GET INDIVIDUALITY WITH BREEDING. Would you like to head your herd with a brother to the junior champion Holstein bull at the Minnesota State Fair, 1916, or the junior champion bull at the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of that blood that won for us the Premier Breedership at the Southwestern Dairy Show and the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of the blood that enabled us to win the Wisconsin Farm Management Contest, 1915? DO YOU want to breed individuality and production into your herd? If so, NOW is your chance. We offer some 20 choice young bulls from 1 to 15 months old bred in these lines. They are sired by our senior herd sire, Bairdland Segis Sir Prize, and out of daughters of Sir Urmagel Burke, a 31-lb. bull, with a 35-lb. sister. These daughters are making from 18 to 25 lbs. as 3 and 4 year olds. WHAT would one of these youngsters be worth to you? Write us your wants or come and see them. Herd tuberculin tested. Each animal guaranteed to be a breeder.

BAIRD BROS. - - - - WAUKESHA, WISCONSIN

HOLSTEIN BULL FOR SALE

THE bull advertised last week has been sold and we now offer a grand individual, straight top line, square, broad rump, smooth over shoulders, well sprung ribs, good head and lots of style. Dropped July 1, 1915. Sired by Prince Johanna Belle, that came from the same herd that produced Johanna De Kol Van Beers, Cedarlawn Johanna and other noted animals. His dam is a half sister to a former world's record two year old, both being sired by Gem Pietertje Hengerveld Paul De Kol, 13 A. R. O. daughters. We are pricing this youngster at $90.00.

EDGEWOOD FARMS, Inc. PEWAUKEE, WISCONSIN

A PROVEN HOLSTEIN BULL FOR SALE

IN order to avoid inbreeding we offer for sale our great herd sire, King Artis Pontiac, born Jan. 25, 1911. His daughters have made records up to 20 pounds butter in 7 days at 2 years of age. His two nearest dams averaged over 29 lbs. butter in 7 days and his sire's dam has a record of 31.7 lbs. butter in 7 days and 21,834 lbs. of milk and 1,076 lbs. butter in one year. Write for pedigree and photo.

Wisconsin Star Stock Farms Ed M. Schultz, Hartford, Wis.

RIVERVALE FARM

OFFERS some fine Holstein bull calves, very light in color, from A. R. O. dams and grandams and sired by Korndyke Pontiac Piebe Burke, a grandson of Piebe DeKol Burke, at very reasonable prices. Address

Geo. H. Gibson Nashotah, Wis.

OLATHE-HOLSTEINS

STAND FOR BEAUTY-PRODUCTION

SHORTAGE of milk compels sacrifice of young calves. Owing to increase in number of our milk customers, we are compelled to sell some unusually fine bull calves 1 to 2 months old. A. R. O. breeding on both sides. Price for quick sale, $35 to $50. Also a few heifer calves.

SILVER SPRING FARM CO. - EAU CLAIRE, WIS.

A RICHLY BRED ORMSBY

YEARLING Holstein bull, born January 28, 1916. His dam is a half sister to the sire of Ormsby Jane Segis Aaggie, the world champion 90-day cow. His sire is a son of the 32-lb. bull,

BEAUTY PIETERTJE PRINCE

and from a sister to **Pietertje Maid Ormsby,** the former world's record cow. Send for pedigree of this fine bull. Price right. Address

Dopp Brothers Ixonia, Wisconsin

Three Nearest Dams

of this young bull average

26.45 Lbs. of Butter in 7 Days

being 23.71 (3-yr.-old); 27.67; 27.96. He is sired by **Contest Colantha Crown DeKol** and out of a daughter of **Aaggie Cornucopia Johanna Lad Jr. 6th.** Send for an extended pedigree.

JOHN STEELE OCONOMOWOC, WIS.

Staude Mak-a-Tractor $195

Converts your Ford Car into a Guaranteed Powerful Tractor

Make One Dollar Do The Work of Four in All Your Heavy Farm Work

Adapt the wonderful power and service value of your Ford to real labor saving, money earning work on your farm and still have your car ready for the use of your family when you are not working in the fields. You can do it with the Staude Mak-a-Tractor and improve the running of your Ford at the same time, by the permanent features of the Staude Mak-a-Tractor. New radiator, six times more efficient than the present Ford radiator—new force feed oiler—direct feed to motor bearings—sight gauge on dash. The tractor feature itself is installed or removed in twenty minutes.

Four Horse Work—One Horse Cost

In all your farm work, Plowing, Listing, Cultivating, Discing, Crushing Clods, Pulling Stumps, Spreading manure, and any other farm work you are now doing with horses, Staude Mak-a-Tractor will give you four horse efficiency and yet it costs no more than one horse to buy and nothing to keep when it is not working.

Plowing, it has been used with wonderful results by farmers all over the country pulling 28-inch bottom gang plows at a rate of 2½ miles an hour—hauling binders 3 miles an hour—and it will haul your heaviest farm wagons—fully loaded—anywhere horses can go—at 5 miles an hour.

Yet it gives you the use of your car for your family at any time, with only twenty minutes required to change it back for road use.

Staude's Masterpiece

This masterpiece of the inventive genius of E.G.Staude is time-tried, owner-tested, by hundreds of users all over the country in every kind of farm work during the past season. Install it on your car without boring any holes—without making any complicated connections. Take off the rear wheels and rear fenders—clamp the attachment to the car with four bolts—replace the Ford wheels with the Staude Roller Driving Pinion integral with the brake drum and the work is done. The radiator and oiling system are permanent and valuable additions to your car.

Remove the Staude axle, tractor wheels and drive pinions when you want your car for the road. The channel frame may stay on the car without injuring the appearance or riding qualities, or you can easily take it off in five minutes.

Only the Best Materials

Staude Mak-a-Tractor is Quality designed, Quality built. The cellular radiator—Staude designed—is the best radiator ever built for Fords and the special oiling system is the most efficient.

The channel section-rolled steel attachment frame is 4 inches deep. The Staude Tractor type wheels are 33 inches in diameter with 8½ inch face, 18 special Staude concave creepers for use in soft soil and sand, cut into the soil and give a pulling effect that cannot be attained through creepers of any other design.

The Staude Roller driving pinions mesh into a driving gear with self cleaning teeth, and this gear bolted to the inside of the tractor wheel carries the driving power, eliminating torsional strain on hub and spokes.

Staude rear axle is back of the car axle, an exclusive feature. The drive pinions *push down* on the tractor wheels instead of pulling up on them. The Ford is pushed by the tractor wheels. There is no waiste effort. Axle is cold rolled steel with 38 inch hitch. All the load is carried on the Staude Mak-a-Tractor axle: none on the rear axle of the car.

Wonderful Motor Efficiency

We furnish a Special Staude Ford Radiator — cellular type—six times as efficient as the standard Ford Radiator. The motor on a tractor heats up much quicker than if it were used in a faster moving vehicle. This is because the volume of air which passes through the radiator is much less when the car is moving slowly. We overcome this by increasing radiator capacity to offset this lower volume of air. Leave this on the car permanently—it's the best Ford Radiator ever built. 1917 Fords require individual radiator equipment — (specify model).

Staude Mak-a-Tractor final drive gear reduction gives 2½ miles an hour for plowing with regular pinion equipment. An extra pinion gives a speed of five miles an hour for hauling vehicles. The motor speed never goes above 1000 R. P. M., a safe, economical, efficient rate of speed.

And so great is the mechanical efficiency that the Ford you use not only runs in high gear, but starts in high.

Lessen Your Work—Increase Your Earnings Today

Figure it out yourself—rental of two teams is easily $10.00 a day—Staude Mak-a-Tractor doing the work of four horses at the cost of one, easily pays for itself in the first few weeks. After that it keeps on earning its cost price, month in and month out for years of service. Compare it with any other tractor—first cost is less than one-third that of any other doing anywhere near the same work and operating cost is only one-third as much.

THE WISCONSIN FARMER

VOL. XLVI. NO. 2. THURSDAY, JANUARY 11, 1917. WHOLE NO. 1824

SIGNITI VAGIN
Reading Room
Univ. of Ill.

Farmers' Packing Plant at Wausau, Wis.

THE Farmers' Co-operative Packing Company, of Wausau, Marathon county, has now been in operation almost a year. Its success has been watched very closely by those interested in such enterprises, as they affect the farmer, and all the more since similar plants are now under construction in Madison, Dane county, and New Richmond, St. Croix county.

There has always existed more or less doubt whether such co-operative enterprises, with the big packers as competition, can succeed. The Wausau group of farmers are the second group in Wisconsin to so organize. Two years ago farmers near La Crosse co-operated to this end and bought a private packing plant, but its operation has met with many ups and downs and at the present time it is closed with the hope of reopening during the coming months. So with new plants at Madison and New Richmond soon to begin operations, the natural question is what is the plant at Wausau doing and is it returning to its farmer patrons a better price than could have been secured had these patrons shipped their stock to Chicago or other markets. In answer, it can be said that the Wausau plant meets the market quotations and there is certainly a saving in freight, shrinkage, etc., on the shorter haul to Wausau than on the longer hauls to the outside market. There also remains the opportunity for the stockholders in the company to share in the dividend if the company makes a profit.

The Wausau company is capitalized at $250,000 and the first killing was done on last January 17th. Its plant was built at a cost of $180,000 and an editor of The Wisconsin Farmer acknowledges with pleasure the courtesy extended to him recently on a visit to the plant. It is a model of convenience and cleanliness and has been built along the most advanced lines in packing plant construction. It has its own refrigeration system, its own ice house for icing cars of dressed meats. The building is of fire-proof construction, four stories high and 118x87 feet in size. It has cold storage capacity to take care of from 60,000 to 70,000 pounds of dressed meats and it is contended that such a plant, to be economically operated, must be able to carry this much meat in storage.

OFFICERS OF FARMERS' PACKING PLANT.
Left to Right—Charles H. May, Auditor; Ben Lang, Treasurer; L. C. Hoopman, Manager.

FRONT VIEW OF THE $180,000 PLANT.

These are details that must all be worked out in management and concern the farmer little so long as the plant is operated at a profit and that he is getting good prices for his stock.

The functions of a packing plant are twofold—to dress and then sell. The business has been recognized as highly speculative. If the stock comes in so fast that the plant soon becomes overstocked and cannot sell its product, it faces a serious condition. The essential is to receive just enough stock daily to keep the plant working nicely and not to stock the stock rooms with dressed meats so heavily that it cannot be readily sold and moved.

If every one of the stockholders, of which there are 2,000, shipped to the Wausau plant in the same week, it would have more than it could care for and probably for two or three weeks would have nothing. So the first plan following organization was to divide the Wausau territory into shipping districts and by the organization of local shipping societies regulate the shipment of stock to meet the daily needs of the plant. There are now thirty-four of these local associations with a manager at each shipping point, and in this way the company at Wausau can notify when to ship and when not to ship. The practice during the killing season is for each association to ship once every two weeks, and this, it has been found, provides a steady supply of stock—enough to keep the plant working normally and not overstocking its yards and tying up its money in that way.

Mr. L. C. Hoopman, manager, believes that the shipping association plan is the ideal one for co-operative plants of this kind. None but stockholders are permitted to ship unless there is a shortage, when outsiders may ship to the plant, but without these organ-

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

Questions and Answers.

Using Coal Oil in Radiator.

I would like to ask if it would be advisable to use coal oil in the radiator of my car to prevent freezing in cold weather. Would it hurt the radiator or engine in any way? Is there any danger of its exploding?

Answer.—We would not advise the use of coal oil in the radiator of either an automobile or a tractor. Its cooling properties are not as great as water; there is danger of an explosion; it ruins hose connections and cuts out the packing of the water manifolds and water pumps; and a coating of gum and carbon is likely to form around the engine cylinders that may prevent the motor from cooling even with water.

Automatic Spark Advance.

I have a 1916 model Metz roadster, equipped with a Bosch magneto having an automatic spark advance. I would like to know how to advance or retard it. There seems to be a clickety noise coming from the valves. A friend said that one of the tappets was loose. Would like to know how to remedy it.

Answer.—It should not be necessary to advance or retard the spark of a motor having an automatic spark advance, while the car is running. If you wish to test the spark so as to occur earlier or later, change the position of the timing gear on the shaft that drives the magneto. There are several things that can cause a clickety noise in the valves. The usual cause is too much play between the end of the push rod and the end of the valve. This end play should be about the thickness of a piece of newspaper when the cam is not raising the valve. Ford cars allow somewhat more than this. Most cars have an adjusting screw at this point, so that the lost motion may be easily taken up. The noise can also be caused by an incorrectly formed cam; a bent cam shaft; a worn valve tappet; or a worn valve tappet guide. The only remedy then is to replace or repair the worn or bent part.

A Drag Saw.

Is it practical to run a crosscut saw for sawing wood with a one-horse-power engine? Please publish diagram showing how saw and frame should be constructed.

Answer.—One horse power should be sufficient to run a cross-cut saw. Figures 1 and 2 are offered as a possible way to construct the machine; Figure 1 being the top view, and Figure 2 the view from the pulley

FIG. 1.

side. A shaft having a tight-and-loose pulley at one end and a crank disk at the other is mounted on a wood frame. The engine should be belted to the tight-and-loose pulley. The crank drives the pitman P, which drives the rocker arm T, at the lower end of which is fastened the saw, which must be free to turn about the bolt, so that the saw will drop

FIG. 2.

down of its own height. The log is supported between the diagonal bracing of the frame. It may be kept from turning by two hooks, shown at R. When the saw cuts through the log, the handle on the end of the saw falls down on B, and prevents the saw from digging into the ground. When the log is being moved forward, the saw may be hooked up over A. The saw should make seventy to 100 forward strokes per minute. If the frame is inclined to "wabble," use diagonal bracing to steady it.

Sawing With Five-Horse-Power Engine.

Please publish an inexpensive practical method of making a drag saw outfit for light work. Would it be practical to use a one-man crosscut saw, run by a five-horse-power gas engine?

Answer.—You could use a one-man saw, as illustrated on this page. If you have a five-horse-power engine, it would be much better for you to buy a circular sawing outfit. Your engine is large enough to run a 26-inch saw. The saw and frame complete should cost you less than $30.

Ford Engine on Tractor.

How would the horse power of a Ford automobile engine compare with the horse power of a stationary engine for such work as running a corn sheller or wood saw? What horse power would it have running on low? What horse power would it have running at the same speed as other engines? Does the Ford Company make a tractor?

Answer.—It is impossible to answer the above questions definitely. About one-third of the rated horse power of any automobile motor might be taken as the safe working capacity of the motor used as a stationary engine. This would give the Ford engine somewhat over seven horse power. At high engine speeds, the Ford engine will deliver its rated horse power, but it would not be advisable to run it constantly at so great a speed. It should deliver seven to ten horse power at a speed of 800 R. P. M. Driving through the transmission on low gear would not increase the available horse power, and the transmission would not stand the strain for a great length of time. Driving through low gear would increase the pull on the belt, but would also decrease the speed of the belt, so there would be no gain in power; the gain in pull being lost in the lower speed. Mr. Ford has done considerable work toward developing a tractor, but we have not heard of its being placed on the market.

Power of Auto Engine.

Would a forty-horse-power Studebaker car pull as much as a twenty-horse-power gasoline farm engine at the same speed all day? Is the motor good and correctly rated? Does the clutch of this car give good satisfaction? How much power will the motor develop on high, intermediate, and low? What makes the best wheels for tractor drive wheels?

Answer.—The remarks in the preceding article apply also to the Studebaker motor. It could be expected to deliver twelve to fifteen horse power when used as a stationary engine. Like nearly all automobile engines, it will deliver more than its rated horse power at high motor speed. The clutch of this car appears to be satisfactory. As stated above, the horse power is little affected by running in high or low gear; the loss of power due to friction being somewhat greater in low gear.

For homemade tractors, old binder bull wheels are often used. For tractors used to pull two 14-inch plows, two drivers about fifty inches diameter and eight inches wide should be used.

Red Seal Dry Batteries
Spark Strongest-Last Longest
Ask Your Dealer
Guaranteed for all Open Circuit Work
RED DRY BATTERY SEAL TRADE MARK
For Ignition AND ALL OTHER WORK REQUIRING High Amperage
Try feeding fat, hot sparks from Red Seal Dry Batteries and get the good, continuous service required to run your Auto, Gas Engine and Tractor most efficiently and economically.
Red Seals give service plus power—and minus trouble. Are Guaranteed—
Best For Gas Engine and Automobile Ignition
Also For Phones, Bells, Hand Lanterns, Etc.
Your dealer will gladly supply your wants and advise you of the superior qualities of Red Seals. Accept no other. The Guarantee Protects You. Ask Your Dealer.

Pull 100 Stumps A Day—With The Hercules
YOU can clear an acre or more of stumps a day. No stumps can resist the Hercules. Doubles land value—enables you to make $1200.00 on 40 acres the first year after stumps are out—and $750.00 in crops *every* year after. Get the proof. Why not
Write Us Now
Book tells all the facts—shows many photos and letters from owners—tells all about the many Hercules features. We'll also quote you a special money-saving price proposition that *will interest you.* Address
HERCULES MFG. CO. 159 25th St., Centerville, Iowa

MAKE BIG MONEY
Concreting In Your Section
You can easily earn $8 to $20 a day with a Sheldon Batch Mixer. Our customers are doing it right now. The jobs go to the man with a Sheldon Mixer every time. Saves labor of 1 to 4 men, according to size of job. Or, if you buy machine for your own use, you can make many times its cost in a season by renting it to your neighbors.
Build Your Own Silo, Tanks, Troughs, Floors, Foundations, Buildings, Etc.
Out of concrete with a Sheldon Batch Mixer. The ideal machine for farm use. Built by a farmer for farmers. Will pay for itself on first small job. Beats hand mixing a mile. And, it's a lot cheaper, too. Takes the backache out of concrete. Makes possible those many small improvements on the farm; you wouldn't do without it. Improvements that save time, labor and money and add many dollars to the value of your land. Just the machine you need.
Make Your Own Concrete Mixer.
At a cost so low you can not afford to mix concrete by the shovel method. Along with our iron parts we send Free Plans and permit for making your own machine. Or, we will sell you the complete machine. Two styles, hand or power. Will mix 21-2 cu. ft. a minute. Keeps 1 to 6 men busy. Has chain drive, self tilting dump, easily moved, and all parts guaranteed. Does work equal to $400 machines, costs less than 1-10 as much. No other machine like it. Patented.
FREE Plans
Write For FREE Catalog and Special Offer
Shows our full line. Sold direct to you on strong guarantee, backed by 30 days trial. Ten men wanted in every county right now to accept our *special offer*, which will help you secure a machine at little or no cost. Write us today for catalog and particulars of offer.
SHELDON MFG. CO.
Box 1593 Nehawka, Neb.
$11.50 up Sheldon Batch Mixer

FREE ENGINE BOOK
Before you buy any Engine—Read my Book, "How to Judge Engines." Tells how to distinguish a High Grade Engine by the difference in cylinders, pistons, valves, ignition, etc., with less cost for fuel, up-keep and repairs. Book Sent Free together with my LOW FACTORY PRICES and Easy Payment Plan. "Built by Experts" 90-day trial offer, etc. Address
Save Half 2, 3, 4, 6, 8, 12, 16 and 22 H-P. Sizes.
ED. H. WITTE, WITTE ENGINE WORKS, 2711 Oakland Ave., KANSAS CITY, MO. 2711 Empire Bldg., Pittsburgh, Pa.

KEROSENE ENGINES
OTTAWA LATEST DESIGN
Durable, Powerful, Reliable, Massive. Built to last; to do hard, heavy work. Uses Cheapest Fuel. Pull ¼ to ½ horse-power more than rated. *3 Months Trial. Easy Terms.* Sizes 1½ to 22 H-P. Easy to start. No Cranking. No batteries. 10 Year Guarantee. Most practical engine ever built. Engine book free. A Postal brings it.
THE OTTAWA MANUFACTURING CO.,
1191 King Street, OTTAWA, KANSAS.

A REAL KEROSENE ENGINE
Sizes 3 to 60 Horse Power.
All Styles for Every Purpose. Gasoline Engines 1 to 60 Horse Power.
SIMPLE - EFFICIENT
A Satisfactory Engine in Every Way.
WRITE FOR BIG ILLUSTRATED CATALOG
Stover Manufacturing & Engine Co.

The Wisconsin Farmer

THURSDAY, JANUARY 11, 1917.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

TO MY WISCONSIN NEPHEWS AND NIECES.

AMONG the many letters of deep personal interest that come to my desk from Wisconsin Farmer readers every day, there are none which arouse a greater feeling of pleasure, and also of responsibility, than those from my young friends all over the state. I think that the richest reward which life can hold for us, whose hair is fast silvering, is the feeling that perhaps we have helped some young man or woman to solve the problems and to meet the difficulties of youth, which are just as perplexing in their way as those of later years.

That is why the following letter from one of my young Wisconsin friends brought a thrill of pleasure, as I read it over the other day:

Waukesha, Wisconsin, Box 13, R. F. D. 4, December 26, 1916. Mr. James M. Pierce, Madison, Wisconsin. Dear Uncle: I should beg your pardon for taking the liberty of calling you uncle, but you make one feel that you are everybody's uncle, and I often speak of you in that way to my father and mother. After reading your advice for a couple of years I feel that it has always been good, and comes from one who is the guardian of all his nephews and nieces in Wisconsin. That is why I call you uncle. The Wisconsin Farmer carries off the purple, in my estimation. Its little hints and suggestions are always timely. I enjoy every department, especially your own page and the stock reports. Mother and father say they can't do without The Wisconsin Farmer, and I won't; so send it along for another year, for which please find draft enclosed. Yours for better farming and more good editorials.

Sincerely your nephew, F. A. NORTON.

My young friend does not need to ask my pardon for addressing me as uncle, for I feel that he has paid me one of the finest compliments possible. As I read his lines, with all the sincerity of youth written into them, it carried me back across the years to my own boyhood days in Ohio, when I, too, was a country lad, working as a farm hand for the princely sum of $5 a month. It recalled most vividly to me those days of struggle, when, a year later, my father fell beneath the stars and stripes before Vicksburg and I had to go to work to earn my own living and help provide for our family at the age of fifteen. It awakened memories of the winter days, when I walked a mile to my work in our local printing plant, sweeping out the five rooms that comprised the editorial and job printing departments, building fires in four stoves and being at my type case by seven o'clock every morning. I often think that, if I had had some paper or magazine to which I could have looked for inspiration, for words of friendly cheer and encouragement, for wise counsel and practical advice, how much it would have meant to me and how it might have helped to smooth the path that was oftentimes rough to my tender feet.

And so my heart goes out to the boys and girls of Wisconsin. If there is anything which I can do or say to help them avoid mistakes, to shun evil, to become useful, efficient, public-spirited men and women, I shall feel that no greater compensation could be asked. The Wisconsin boys and girls of today are the citizens of tomorrow, on whose shoulders will rest the grave responsibilities and burdens of nearly 180,000 prosperous Wisconsin farms. They are our greatest wealth—our hope and our future.

Uncle to the boys and girls of the Badger state? Yes, a hundred times yes—an uncle and friend, who sees in all his thousands of nephews and nieces, scattered over the state, the realization of the vision of good things which he dreams for the Wisconsin of tomorrow. That out of my own experiences I may help them to accomplish the great work which is before them is my fondest wish.

PROTECTION AGAINST SWINDLES.

I WANT to commend the example set by the farmers of Dakota county, Nebraska, who have organized what they call the Farmers' Protective Association. The chief aim and object of this organization is to protect the farmer-members against swindling schemes. Every member is pledged to refuse to invest a single penny in any plan or enterprise which does not have the endorsement of the association, and this endorsement is not to be had until a full investigation has been made of the plan and of the men back of it.

These farmers are determined (as a newspaper clipping sent to me by one of the number expresses it) that none of them "shall buy a city hall or court house or railroad station of some smooth-talking, affable stranger." The plan of the association, as I understand it, is just this: Anybody who has a speculative proposition, which he wishes to interest the farmers in, must submit it to all the members of the association at a public meeting and be ready with proofs that it is all he represents it to be. If the association then votes that the proposition is all right, the promoter may go out among the farmers and endeavor to interest them in it. If the association finds no merit in the plan, the promoter cannot get the ear of any of the members.

From this distance, I can see only good in the plan. The farmer should be protected against the unscrupulous and the wily fully as much as the merchant; and the latter has associations, in almost every town and city, for just such protection. I might cite the situation as it exists in the city where my publishing plant is located. The local Chamber of Commerce has a committee to which all promoters must come to secure credentials, entitling them to admittance to the office or place of business of members of the association. It does not matter what the plan is. It may be simply the insertion of a small advertisement in the program of a home-talent theatrical performance. It may be a book writing up the prominent men of the community. It may be a plan to sell stock in an altogether worthy enterprise. Regardless of its scope or merits, the proposition must be presented to this investigating committee and a favorable report made by them before credentials are issued, which entitle the promoter or agent to enter the place of business of the members. The Farmers' Protective Association, of Dakota county, Nebraska, is right in line. After all, the farmer needs such protection even more than the city man. Not that he is more credulous or gullible, for the farmer of today is too hard-headed and practical to be taken in by the slick schemes of former years. But the city man has the advantage of his daily newspaper to warn him against "slickers" the minute they put in an appearance. He meets his friends and neighbors on the street a half dozen times a day and the word is passed around that a new swindling scheme is being attempted. The farmer does not have all these advantages and protections. His daily paper may be late; the swindler may put in his appearance before the paper, exposing him, arrives. The farmer does not meet his friends and neighbors on the country road a half dozen times a day; the swindle may be effected before the word can be passed around the countryside. Therefore, it seems to me that such a protective association as I have outlined here is invaluable.

The world is undoubtedly growing better, but swindlers will continue to the end of time. Just recently the courts have convicted some dozen or more men, who made a cool million dollars selling imaginary wild horses, supposed to exist "somewhere in Arizona," to confiding investors, mainly in Kansas, Nebraska, Missouri, Iowa and South Dakota. Altogether something like 25,000 of these non-existent wild horses were sold. One man is said to have bought 1,000 head. The promoters claimed the wild horses were the "get" of certain Percheron stock that had been brought out to a government Indian reservation many years ago and that had broken loose and had never been recaptured. To begin with, there were no such wild horses as were sold, and, in the second place, even had there been, it was practically impossible to catch them and get them to market. But the scheme worked and $1,000,000 was cleared up in a couple of years. It only remains to add that most of the investors were city and town men, the farmers kept aloof. But wild-horse schemes, in some form or other, are constantly being promoted, and anything which will protect the farmer, as well as the town dweller, from the unscrupulous deserves our praise. I hope the example set by the Nebraska farmers will be widely followed.

PERSONAL CREDIT.

I AM in receipt of a number of letters, of which the following is a fair sample. It comes to me from a farmer in Wisconsin who cannot see how the new federal farm-loan law is going to improve conditions very materially. He writes:

How is the new federal loan law going to help the man who cannot already secure help from his local banker? Isn't there a factor in money loaning just as big as the security? Isn't that factor personal credit? Give us your ideas on this.

I have repeatedly stated in these columns that no laws can permanently help the man who is undeserving of help and who will not do all that he can for himself. The new federal farm-loan law is not designed so much to aid the farmer who cannot secure a loan under existing conditions as it is to enable the worthy farmer to secure his loans for a longer time, at a lower rate of interest and with an easier method of repayment. Back of all financial systems stands a factor which must never be overlooked for a minute. That factor is personal worth, or credit, as it might better be called.

I cannot do better in explanation of what I mean than to reprint the testimony of the late J. Pierpont Morgan before a congressional committee of investigation. Mr. Morgan was being examined by the noted lawyer, Samuel Untermyer, on the question of what entitles a business man (the same principles apply to the farmer, who is now generally recognized as being a business man) to credit. Here is an actual transcript of the testimony:

Mr. Morgan—I know lots of men, business men, too, who can borrow any amount, whose credit is unquestioned.

Mr. Untermyer—Is not that because it is believed that they have the money back of them?

Mr. Morgan—No, sir; it is because people believe in the man.

Mr. Untermyer—And it is regardless of whether he has any financial backing at all, is it?

Mr. Morgan—It is very often.

Mr. Untermyer—And he might not be worth anything?

Mr. Morgan—He might not have anything. I have known a man to come into my office, and I have given him a check for a million dollars when I knew he had not a cent in the world.

Mr. Untermyer—Commercial credits are based upon the possession of money or property?

Mr. Morgan—No, sir; the first thing is character.

Mr. Untermyer—Before money or property?

Mr. Morgan—Before money or anything else. Money cannot buy it.

Mr. Untermyer—So that a man with character, without anything at all behind it, can get all of the credit he wants, and a man with property cannot get it?

Mr. Morgan—That is very often the case.

Mr. Untermyer—But is that the rule of business?

Mr. Morgan—That is the rule of business, sir.

Mr. Untermyer—If that is the rule of business, Mr. Morgan, why do the banks demand, the first thing they ask, a statement of what the man has got, before they extend him credit?

Mr. Morgan—That is what they go into, but the first thing they say is, "We want to see your record."

Mr. Morgan is quoted as having said that a millionaire is not necessarily a man who has a million; it is a man who can get a million. The successful farmer is not necessarily a man with a hundred thousand idle dollars in the bank; it is one with pedigreed herds, whose fields yield above the average, whose buildings are kept in the best condition and whose farm produces to the utmost at a minimum of effort and expense.

I printed the letter, a couple of weeks ago, of a poor Holland immigrant-farmer, who came to northern Wisconsin and confronted almost insuperable difficulties, facing want and actual hunger before he finally began to make good. You may recall this portion of his letter:

Then the third day of March a certain person came to our place and asked us how we were getting along with our farm and how we stood with the real estate man from whom we bought. I told him as well as I could how things were with us. It was always the same story—I had so many expenses and I did not have a dollar in the house. Then he says, "I know you and your woman so well that I know you are too honest to try to beat anybody and I feel sorry for you and for your family. If there is any way of going after that man I will give you the money to pay for your farm on 5 per cent interest." Five days after that everything was all right, and now we have a good, clear title.

That poor immigrant-farmer had nothing to back up his note with, to make him a safe risk, except personal worth; personal credit, if you like that term better. Keep your credit good and you can hardly fail to forge ahead in the world. Pay your notes the very day they are due, or go on that day to the banker or implement dealer (or whoever holds them) and make arrangements for their extension. Never fail to do this. It is best even to ignore the customary three days of grace; bankers quickly notice the man who pays promptly and who takes no advantage of any subterfuge or delay. That man will get the next desired loan without a word of protest and at a lower rate of interest than the man who is careless of his credit.

The man behind the loan is just as important as the man behind the gun or the plow. He is fully as important as the security behind the loan. After all, he is the security, fully as much as the land or the stock or whatever is the collateral named in the mortgage. Keep your credit good under whatever financial system is in vogue; nothing is more important, nothing will advance you along the highway of prosperity at a surer, swifter pace.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-in-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Avenue Des Moines, Iowa — 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscriptions or advertising may be addressed.

MEMBER AGRICULTURAL PUBLISHERS' ASSOCIATION. MEMBER OF AUDIT BUREAU OF CIRCULATIONS

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of 100 or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription price in Canada $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as before or state both the old and new names and explain why you change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address

The Wisconsin Farmer Madison, Wis.

Some Facts of Which We Are Proud.

There are many things to which The Wisconsin Farmer points with pride, as proof of the fact that it is the leading agricultural weekly of the state—first in the hearts and homes of Wisconsin's farmers.

The Wisconsin Farmer is proud not alone of the fact that it has the largest circulation, both inside and outside the state, of any farm weekly published in Wisconsin, but also of the additional fact that it has always been frank and fair with its readers and advertisers alike in circulation matters.

We believe that both of these classes of patrons are entitled to information regarding a paper's minimum guaranteed circulation, and, in line with that policy, The Wisconsin Farmer presents its figures in every issue, being the only farm weekly in the state that is doing this. In addition we furnish all advertising patrons desiring it with a map, showing the actual circulation in every county in the state, which is reliable evidence of our circulation supremacy.

The Wisconsin Farmer has nothing to conceal, and is willing and anxious to furnish the fullest information regarding its affairs to those who are interested. Not only are we proud of our circulation, but we are also proud of the kind of homes in which The Wisconsin Farmer is a weekly visitor; we are proud of the editorial features which we publish weekly and of the fact that we have one of the largest, strongest and most practical agricultural editorial staffs in the country; and we are proud of the character of the commercial and live stock advertising which appears in these columns.

All of these factors are important in the publication of a well-balanced farm journal, and The Wisconsin Farmer is glad to be able to base its claim to recognition as the Badger state's leading farm weekly on so substantial and well-tested a foundation as these facts afford.

Clean Milk the Wisconsin Dairyman's Ideal.

The cost of producing milk is one of the most important problems that confront Wisconsin dairymen today. It is true they are getting more for their milk than during past years, but feeds are also higher and as the cost of production goes up, even with higher prices, there is the possibility that the dairyman is none the better off. Unless prices rise more rapidly than the cost of producing the milk producer is none the gainer, so when production costs are watched carefully and cut to the minimum the margin of profit will just that much increase.

This brings us to the very able address of Mr. W. J. Dougan, of Beloit, at the recent state dairymen's convention. Mr. Dougan left the ministry to take up dairying and today his farm supplies a large part of milk for the city of Beloit.

Mr. Dougan does not belong to that school of thinkers who believe that milk to be clean must be surgically clean, that is, produced in a stable like an operating room and the milking approached with all the care of a critical surgical operation and that all milk be cooled close to the freezing point. Such requirements as these secure results there is no doubt, but these methods place the cost of production beyond reach of the average consumer. While Mr. Dougan does believe in clean milk, these extreme precautions he does not regard as necessary or absolutely essential. On this point he said:

There are three essentials embodied in the idea of clean milk, however, that cannot be disregarded. Namely: The cow, the utensils and the dairyman. The cow must be healthy, well fed and well groomed. But these factors cannot all be added to cost of production for the healthy, well-cared-for cow will pay a large part of the expense in increase of milk. Everything that comes in direct contact with the milk must be bacterially clean. The factor overshadowing all others and without which others are futile, is the clean dairyman himself. Not only must he be clean in appearance, but he must be of a clean, conscientious mind. That these methods get the desired results is proven by experiments carried on by the New York Experiment Station and in our own experiments. We had our own milk tested for bacteria at the experiment station at Madison each month for two years. Sixty-four per cent of the samples were under 5,000 bacteria per cubic centimeter; 88 per cent of the samples were below 10,000 bacteria per cubic centimeter, and our lowest was 800. This milk has also stood the test of satisfactorily feeding and saving the babes of our town.

It is as important to have clean milk for cheese and buttermaking as for the direct consumption. Farmers often object that they cannot afford to produce a clean milk, so they ask the public to consume their dirty product and to pay a good price for it. There is no better way to increase the use of dairy products than by giving the public to feel that these products are pure and wholesome, and handled with conscientious care to safeguard the public.

The mission of this association is to promote education in the production and use of clean dairy products, to fasten sane legislation on our statute books and to secure uniformity in regulations and inspection. Wisconsin should become famed for producing milk only from clean, healthy cows handled by clean-minded, high-principled men.

The production of clean milk should be the ideal of every dairyman. It not only means better prices in the end, but there is a lot of satisfaction in knowing that such is the case.

Special Issues Coming Soon.

The schedule of The Wisconsin Farmer for the next two months calls for some unusually interesting and valuable special issues, as follows:

Poultry number—February 1st.
Dairy and silo number—February 15th.
Building number—February 22d.
Garden, orchard and spraying number—March 1st.
Farm home number—March 8th.

Already the editors of The Wisconsin Farmer are hard at work, preparing and purchasing articles for these special numbers, which will be richly illustrated and which will go exhaustively and entertainingly into the various subjects. We are quite confident when we predict that no farm paper ever issued better editions (dealing with the all-important subjects of profitable poultry raising, fruit culture, dairying, building and farm home improvement) than The Wisconsin Farmer will issue on these subjects on the dates scheduled above.

Because of the fact that these big special editions are coming at so early a date, we want to repeat our suggestion to present subscribers to lose no time in renewing their subscriptions, so as to insure their receiving every copy. To procrastinate is to run the risk of missing one or more of these special issues, which alone will be found worth the whole year's subscription price. If every one of our present readers, whose subscription expires within the next few weeks, will renew promptly and will take the trouble to secure at least one new subscriber, we shall be able to make this the busiest, biggest and most useful year The Wisconsin Farmer has ever enjoyed.

Renew promptly, send in as many new subscriptions as possible and watch for these special issues; they will be authoritative, entertaining, practical, readable, richly illustrated and of interest to every member of every farm household into which The Wisconsin Farmer comes on its weekly visits.

Marketing Wisconsin Corn

Mr. John L. Tormey, secretary of the Wisconsin Short-horn Breeders' Association, has written a good bulletin on meat making, and this bulletin has been distributed by the Wisconsin Bankers' Association. Mr. Tormey takes the position that marketing corn direct should be generally condemned as a soil-robbing process. The farmer with a good eye for business should market his farm crop through live stock, reserving for his land a large proportion of plant food produced and selling his products in finished form and hence at an advanced price.

Mr. Tormey gives some interesting illustrations:

First: He shows an illustration of beef animal through which corn was marketed at 66 cents a bushel. The animal had to be fed 176 days, gaining but 1.7 pounds daily, and being fed each day, thirteen pounds of timothy hay, and fifteen pounds of corn.

Second: Another good well-bred animal marketed corn at $1.01 a bushel. It took this animal 120 days to make the same total gain as the animal referred to above. While the first animal gained 1.7 pounds daily, the second used as an illustration gained 2.5 pounds daily. But see what the second animal had to eat daily: Twenty-five pounds of corn silage, four pounds of clover hay, three pounds of cottonseed meal and fifteen pounds of corn.

This forcible illustration of introducing business methods into the feeding of steers is of no less interest than another illustration on feeding hogs. Mr. Tormey says there are many men who hesitate to feed their high-priced corn to hogs, and this has resulted in hog raising on many of our dairy farms as a mere side issue, and in many cases it is dropped altogether, usually we might add resulting in loss of profits on the farm. There are two illustrations on hog feeding:

First: A bunch of hogs market corn at 90 cents a bushel, or less. They must be fed 180 days weighing fifty-three and one-half pounds at the beginning and each to weigh 225 pounds at the finish with an average daily gain of .91 pounds daily. While these hogs have a balanced ration, they are kept in a dry lot and are eating daily 4.3 pounds of corn and .348 pounds of tankage.

Second: Another bunch of hogs which sold at 9 cents a pound at the feed lot and paid back $1.22 a bushel for the corn which they ate. It took only 125 days to increase the weight of these hogs from 52.2 pounds to 225 pounds on the average, and the gain was 1.36 pounds daily. These hogs had the run of one-fifteenth of an acre of rape. Besides this they ate daily 5.1 pounds of corn and .222 pounds of tankage. Under the conditions which they were raised, they had a great appetite for corn.

Continuing his illustrations and applying same to the sheep raising, Mr. Tormey gives two instances again in point:

First: This feeder lost money—the animal fed returned only 86.9 cents a bushel for corn and had to be fed 146 days to gain thirty-five pounds. This animal had a balanced ration, but an expensive and inefficient one. The daily ration included one pound timothy hay, one pound of corn and .2 pound of cottonseed meal.

Second: This feeder made money. The animal returned $1.19 per bushel for corn and made thirty-five pounds of gain in 109 days. This animal was fed on a farm where clover was grown. The daily ration fed was 1.5 pounds of clover hay and 1.3 pounds of corn.

In summing up his statement, Mr. Tormey shows that the meat-making business furnishes the farmer with a market for grain and forage, saves the by-products for farm use, and supplies the nation with an important article of food. If the farmers of this state would adopt proper feeding methods and make a little more careful study of the production of meat they would engage more actively in this business and would certainly profit by so doing.

Better Farm Animals Greatest Need of 1917.

Investigations made by the department of agriculture pertaining to the relative income obtained from grain farming as compared with stock farming shows up strongly in favor of the latter. One of the most farseeing agriculturists who is now before the public eye, Mr. Carl Vrooman, assistant secretary of agriculture, says there are three things necessary to make a money-maker of a farm that has been a losing proposition through steady grain farming. First, says Mr. Vrooman, grow more legumes; second, raise live stock as a side line, thus saving waste in pasture, fodder, straw, etc., holding down grain sales and keeping up the productivity of the soil; third, keep accounts of receipts and expenditures, thus substituting figures for guesswork as to whether money is being made or not. It was ascertained by the Iowa Beef Producers' Association that the yield of hay per acre on representative stock farms was two and one-fifth tons, while on grain farms the yield was one and one-fifth tons. Corn yielded on the average fifty-two bushels per acre on stock farms and thirty-eight bushels on grain farms. Even oats yielded seven bushels per acre more on the former than on the latter.

In spite of this splendid showing, live stock production is not keeping pace with the increase in our production. Prices during the last year have been most attractive and these may stimulate a keener interest in that type of farming which leads to the marketing of all the roughage and most of the grain through the medium of live stock. In all agitations, however, that are made favoring live stock farming the mistake must not be made of losing sight of the necessity of dealing with animals of an improved type. In the production of horses, cattle and hogs, as well as sheep, the extended use of the pure bred becomes imperative if progress is to be made. In any event live stock farming means a steady occupation every day in the year and what could be more discouraging than to have our boys and young men on the farm feeding scrub cattle, scrub hogs or scrub horses three times a day during 365 days in the year?

Those individuals who want their boys to follow in their footsteps and take up agriculture as a life calling will find their greatest aid in having their plans carried out in familiarizing the boys with the right class of stock. Without any sort of bookkeeping test the young man who cares for a cow that will only average 150 or 200 pounds of butter a year knows instinctively that there are meager profits from labor spent in handling trash of this kind and it is likewise true that the boy is apt to quickly pass up the work of farm choring if he has under his care thriftless, long-faced, slab-sided steers or late-maturing, long-legged, profitless hogs.

The tables are entirely turned if instead of the types we have referred to boys have to deal with animals having a cross or two of improved blood. This means in the dairy cow a possible doubling of her capacity, while in the case of the steer it means that the same weight can be attained in possibly twelve months shorter time than with the inferior animal. In the draft horse the first cross may add anywhere from 200 to 400 pounds onto the mature weight of the progeny and this may mean practically the doubling of the market value of an animal at four or five years old. In every way the arguments are all in favor of the improved animal.

In advising improvement of animals we are not overlooking the increased revenue that comes from the expenditure of a given effort, but after all it must be remembered that the greatest and most important factor to be dealt with on the farm is the farm family. Such policies as will contribute to their development must be enforced at all hazard and on the average we maintain that the well-conducted live stock farm where improved animals are dealt with takes a much firmer grip on the boys as they come into manhood than the grain farm which of necessity means a continuous and constant soil depletion.

Of Interest to Wisconsin Hog Raisers.

More and more stockmen are coming to believe that the policy of getting meat animals ready for market at an early age is sane and sound and in a recent issue of the Illinois Agriculturist E. T. Robbins gives a number of instances where swine breeders have been able to bring their hogs to a weight of practically 200 pounds at six months. Mr. Robbins places much emphasis on the importance of balancing the ration and the feeding of tankage has been attended with excellent results. In discussing these matters Mr. Robbins says:

Before our farm bure[illegible] began,

very little tankage was fed to hogs. Farmers have now been told the results they could expect from tankage. Farmers' elevators have been persuaded to put this in at a moderate profit so now several carloads of tankage are used in the country every year. The feeding of tankage is increasing steadily and is evidence that farmers appreciate the profit in its use.

Hog breeders have also been persuaded to pasture their hogs on alfalfa. This method has given splendid results in rapid and cheap gains on young hogs. Some of them have been persuaded to feed alfalfa hay to their brood sows in winter and this has brought their sows through the winter in splendid condition with very little other feed and they have had strong pigs. The last two years a special effort has been made to get farm bureau members to breed their sows for March pigs and push these along rapidly and sell them in September. This fall we got in reports from several members who carried this plan through and they were greatly pleased with the results.

L. E. Brown, of Delavan, had his pigs farrowed on the average the first week in March and he sold them September 8th, weighing 197 pounds in Delavan and the local shipper there paid him $10.50 per hundredweight. They topped the market in Peoria at $11.25. They had ear corn and tankage in self-feeders, and ashes and salt and part of the time corn-cob charcoal. They had blue grass pasture.

Wilbert C. Sommer, of Pekin, had thirty-two Chester White pigs farrowed between February 10th and March 19th. These were fed ear corn and tankage in the spring and later had shelled corn and tankage in self-feeders together with alfalfa pasture. He sold them at Peoria, September 12th, averaging 195 pounds at $10.90 per hundredweight.

S. L. Ackerman, Tremont, fed his March Poland China pigs ear corn and tankage in self-feeders with alfalfa pasture. He sold them in Peoria, September 20th, and the forty-nine head averaged 105 pounds at $11.05 per hundredweight.

R. B. Orndoff, Hopedale, had fifty-seven March and April Poland China pigs which he fed shelled corn and tankage in self-feeders with blue grass pasture and sold in Peoria, September 28th, averaging 186 pounds at $10.25 per hundredweight.

Frank Harris, Tremont, had forty March and April Poland China pigs which he fed shelled corn and tankage with a little middlings in self-feeders and sold September 18th, at home, averaging 188 pounds at $10.65 per hundredweight.

Jos. Morris, Washington, had eighteen March cross-bred Duroc Jersey-Chester White pigs which he fed skim milk and alfalfa pasture with a little corn until August and after that all the corn they would eat. He sold eight on August 21st, averaging 160 pounds at $11.10 per hundredweight, and ten on September 21st, averaging 165 pounds at $9.25 per hundredweight.

These are examples of what can be done in pushing early pigs along so as to sell early in the fall when the price is usually the highest of the year. For the last twenty years the September top prices of hogs in Chicago have averaged $7 per hundredweight and for December $5.97 per hundredweight. On the average for twenty years a 200-pound hog could be sold in September for $14 and in December it would take a 235-pound hog to bring as much money. The 235-pound hog would have eaten about three bushels more corn than the other, and would run the risk of cholera three months longer. These are some of the reasons why these men and many other farm bureau members are breeding their sows in November.

It is a well-known fact that instances can be found in every neighborhood where hogs are no heavier at eight or nine months than those marketed by these Tazewell county stockmen in September. It is interesting to note that, considering prices for a twenty-year period, a 200-pound hog will bring as much money in September as the same hog would in December, providing he had run up to 235 pounds in weight. There is, as stated by Mr. Robbins, not only the three bushels of corn extra and the risk of cholera but there is the labor involved in its care, which in these days is an important item. Caring for fifty or a hundred hogs during the period of threshing, fall plowing and corn husking makes life rather strenuous during those periods, because under ordinary circumstances one has to put in full days at these tasks in addition to the time spent in choring. All things considered, it must be conceded that there is a clearly defined advantage in getting rid of hogs and indeed all classes of meat animals at an early age.

Mr. Edison's Wonderful New Phonograph

Sent on Free Trial

Read the Coupon Below! An astounding offer—the New Edison, Mr. Edison's great new phonograph with the new Diamond Stylus reproducer, and twelve brand new Diamond Amberol Records sent to you on **absolutely free trial. Send no money**—just fill out the coupon below and send it to us at once. We will send you the complete outfit immediately. Entertain your family and friends with the latest song hits of the big cities. Laugh at the side-splitting minstrel shows. Hear anything from Grand Opera to Comic Vaudeville. Then, if you choose, send the whole outfit back to us **at our expense.**

Only $1.00 After Trial If you wish to keep Mr. Edison's superb new instrument after the free trial, send us only $1.00. Pay the balance of $36 for the complete outfit in easy payments of only $3.50 a month.

Think of it—a $1.00 payment, and a few dollars a month to get this outfit of Mr. Edison's new phonograph with the Diamond Stylus reproducer, the life-like music—the same Diamond Amberol Records—all the musical results of the highest priced outfits. The *finest*, the *best* that money can buy at very much less than the price at which imitations of the Genuine New Edison are offered.

After years of labor on his favorite invention, Mr. Edison has made the music of the phonograph true to life. There is no reason, now—especially since we make this rock-bottom offer—why you should be satisfied with anything less than Mr. Edison's genuine instrument.

Send No Money — Just the Coupon

Convince yourself first. Get the New Edison in your home on free trial. See for yourself how much you *need* it in your life. See how much happier it will make your home. Just fill out the coupon and send it in. No money down, no C. O. D. You pay us nothing unless you keep the outfit. Send it back, if you wish, at our expense. Or pay only $1.00 after the trial, and $3.50 a month until you have paid $36.00. Send the coupon today.

F. K. Babson Edison Phonograph Distributors
4581 Edison Block, Chicago, Ill.
Canadian Office: 355 Portage Ave., Winnipeg, Man.

No obligation to buy in sending this coupon, this is just an application for a Free Trial

F. K. BABSON, Edison Phonograph Dists., 4581 Edison Block, Chicago, Ill.

Dear Mr. Babson:—As per your offer, I should like to hear Mr. Edison's wonderful new style phonograph with the new Diamond Stylus reproducer in my own home on free trial. Also send me twelve records. If I decide to keep the outfit, I will have the privilege of the rock-bottom price of $36.00 direct from you on your special terms. I merely agree to take the outfit promptly from the depot, pay the small freight or express charges, and if I do not find it thoroughly satisfactory, I reserve the right to return the outfit at once at your expense. Otherwise, I will send the first payment of $1.00 within forty-eight hours after the free trial or as soon as possible, in no case exceeding one week, and will make monthly payments thereafter of $3.50 for 10 months. The outfit is to remain your property until the last payment has been made.

Bad Shoeing the Cause of Sidebones.

A writer in the North British Agriculturist discusses an ailment that is altogether too common among draft horses and he points out that "sidebones" are in most cases produced by the wearing of high-heeled shoes which lift the frog of the foot from its weight-bearing functions and from the ground pressure, thus throwing all the weight on the lateral cartilages, and these, from the extra work that they have to do, become inflamed and finally are turned into bone. They are found in the forefeet of draft horses and particularly in horses with strong, upright feet. If this ailment is hereditary it is due to the fact that certain conformations predispose the animal in favor of this ailment and irrational shoeing contributes to the rapid development of the trouble.

While the writer referred to points out that in a great majority of cases of sidebones there is no lameness and little or no inconvenience, it may be said that this holds true merely where horses are kept on the land, but when they are put on the city paving tenderness or soreness will sooner or later develop, the practical effect of which is to shorten the period of usefulness of the draft horse so affected. If it is true that even a sound foot can be put out of condition by high-heeled shoes, then it follows that those who are handling good draft horses and particularly those who deal with pure breds should not leave the shoeing entirely to the judgment of the blacksmith. The latter is inclined to use a little too much metal and in many cases he does not realize the serious results that may come from throwing a horse too high up in the air and taking the weight from the frog where it naturally belongs. We are not attempting to cast any aspersion on the profession of blacksmithing, but we do say that there is a tendency on the part of some individuals in the profession to commit this outrage on almost every heavy horse that comes into the shop.

Buying Cattle For Upper Wisconsin.

G. M. Householder, Rusk county agent, recently made a trip to Eau Claire county in company of prominent farmers, and purchased a carload of high-grade Guernsey and Holstein cows, including two pure-bred sires. These sires will head the J. S. Schmidt and A. T. Atwood herds in Rusk county. Mr. Householder reports that owing to the shortage of feed and overstocking on young animals it is possible to buy high-grade cows at this time at a quite reasonable figure. His recent trip was so successful that he is offering to make a similar purchasing tour for other farmers of the county, providing several will go in together and co-operate on the purchase of a carload or more.

The thirtieth annual meeting of the Wisconsin State Cranberry Growers' Association will be held at the G. A. R. hall in Grand Rapids, January 16, 1917. The officers of this association are: President, Andrew Sells, Grand Rapids; secretary, J. W. Fitch; vice president, C. J. Hoffman, Mather; treasurer, H. J. Gebhardt, Black River Falls.

With four large markets but a day's distance from any farm in the hog-producing section, Wisconsin farmers are ideally situated to market their hogs on foot successfully.

To Protect them from Tuberculosis

WHAT farmer wouldn't give 4 cents a day for one year to protect his stock from this dangerous disease for all time? This small sum for each animal in the barn quickly pays the cost of a King System of Ventilation. And no one can suggest better protection from tuberculosis than fresh air. Write for our new book on barn ventilation and let us tell you about the service back of the

KING SYSTEM OF VENTILATION

Planned for the Building It Goes Into

It costs less money to install a King System than to try to get the same results in any other way. We have eliminated guess work from planning the system—and we are equipped to supply the material for the system at lowest cost. In other words, we can give you more for your money and in addition *guarantee* the results after it is installed.

GET THIS BOOK

You can install a King System in any barn, new or old. The King Aerators are the first units of the system. They can be installed with or without the complete system. Write for our new book on barn ventilation.

KING VENTILATING CO.
1144 Cedar St., Owatonna, Minn.

Good Barn Ventilation Starts with the King Plan.

Faultless Stump Puller

At a Special Low Price

The Faultless actually pulls from 50 to 100 percent more stumps at less cost of time and labor than any other stump puller. The cable winds onto the drum at the bottom all the time and the idle coils slide toward the top. This keeps the pull down and in a direct line with the anchor, and increases power. The machine cannot tip. Drum accommodates all of the cable, and it goes on only one layer deep. This prevents wear and relieves the strain on team and machine.

Machine and Cable are Guaranteed

against breakage for one year. Machines in use 15 years and longer are still in service.

Pull Stumps for 10 Days---Free

Clear from 10 to 50 acres. If not then satisfied that the Faultless Stump Puller will do more than we claim, return it to us at our expense.

The superiority of the Faultless is recognized by hundreds of farmers and railroads. It received highest awards at both the World's Fair at St. Louis and the Lewis & Clark Exposition at Portland in competitive demonstrations.

Write for special low price on our complete outfit, and our free book on clearing stump land.

Faultless Stump Puller Company, Dept. E, Cresco, Iowa.

MINNEAPOLIS PANEL SILOS

The silo that adds attractiveness to your farm buildings.

Built of Steel and Wood

Won't collapse when empty, rests uniformly on foundation, no tightening of hoops. Mechanically and structurally correct.

Shiplap, Drop Sided, Paneled Walls means longer life because seams and joints are always dry.

Catalogue and information sent upon request.

PUFFER-HUBBARD MFG. COMPANY
3205 26th St. MINNEAPOLIS, MINN.

When writing to adverisers kindly mention The Wisconsin Farmer.

Cow-Testing Reports.

Highest Cow's Ration.

To the Editor:—The Waupaca and Butternut Ridge Association had a fine report for the month ending Decemb r 20th. There were thirty-nine cows which produced forty pounds of butter fat or over in a thirty-day period. A grade Holstein belonging to E. O. Frihart, of Maple Grove Farm, produced sixty-one pounds of fat for the period, from 1,572 pounds of 3.9 per cent milk. The feed ration for this cow was corn silage, clover hay, roots, hominy, bran, ground oats and oil meal. Mr. Frihart's herd averaged 38.8 pounds of butter fat for the month. The report for the thirty-day period, giving the cows which produced forty-five pounds of fat or over, is as follows:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
F. R. Constance					
Lady, R. J. ..	3	11-12-16	921	5.0	46.0

Argument For Pure-Bred Stock.

To the Editor:—Wood County Cow-Testing Association No. 1 had thirty-one cows and heifers which produced forty pounds of butter fat or over for the thirty-day period ending December 30, 1916. The highest producing cow, a registered Holstein, produced 64.7 pounds of butter fat, and this record in comparison with other grade or native cows having the same advantages, show up well for the pure breds. The record for the month is as follows:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
J. F. Schmidt					
Joh. Piet Fobes, R. H.	4	12-8-16	1749	3.7	64.7
H. J. Bassuener					
Clothilde, R.H.	5	11-10-16	1464	3.4	50.8
J. T. Holland					
Cynthia Ann, N.	4	12-10-16	1035	4.6	47.6
O. Osenga					
Dora Thorn, R. H.	3	11-23-16	1322	3.6	48.9
Mary, G. H...	6	11-10-16	1271	3.8	48.3
J. C. Keeffer					
No. 18, R. H...	4	11-10-16	1488	3.1	46.1
Peter Van Der Ploeg					
Bonnie, G. H..	6	10-31 16	1456	3.5	50.0
Belle Wood, R. H.	3	10-11-16	1314	3.6	47.3

J. L. Williams, Offcial Tester.

From a New Association.

To the Editor:—This is the first report from our new association, known as Sauk Prairie Cow-Testing Association. The cows which produced forty-five pounds of butter fat for the thirty-day period ending December 31, 1916, are as follows:

Owner, name and breed	Age	Lbs. milk	Per cent fat	Lbs. B. fat
A. G. Arcola				
Fern's Bebelle, R. J.	10	930	4.9	45.5
J. H. Arcola				
Spot, G. S. H.....		976	5.2	50.7
Martin Moely				
Grandma, G. H.....	8	1047	4.6	48.2
Holstein, G. H.....	4	1370	3.8	52.0

There were six cows between forty and forty-five pounds.

Earl Clingman, Official Tester.
C. A. Bickford, Secretary.

Luck Association.

The Luck Cow-Testing Association in Polk county now numbers twenty-seven herds. H. L. Trede and Alex. Holmberg had the two highest producing cows last month. A grade Guernsey owned by Mr. Trede produced 4 .3 pounds of butter fat from 900 pounds of milk, testing 4.7 per cent. A grade Holstein owned by Alex. Holmberg produced 40.4 pounds of butter fat from 1,155 pounds of milk, testing 3.5 per cent. The tester for this association, Marius Neilsen, reports having found three separators last month which left excessive amounts of butter fat in the skim milk.

Geneva Records.

To The Editor:—The following table shows the cows in the Geneva Cow-Testing Association, which produced forty-five pounds of butter fat or over for the thirty-day period ending November 30, 1916:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
O. P. Taylor					
Erma, R. J...	4	11-6-16	900	7.3	65.7
Queen, R. J...	6	10-22-16	963	5.5	53.0
A. G. Palmer & Sons

F. W. Drake, Official Tester.
Leo D. Dunlap, Secretary.

Practically no injury to alfalfa from summer heat has been recorded in dry climates, but high temperatures combined with much moisture in the atmosphere are so injurious that it is difficult to grow the crop successfully under these conditions.

Don't you prefer a "no-winter" farm! California

Maybe where you now live everything is frozen up —in winter's grip

Roads snowdrifted Bare fields, bare trees

Stock eating their heads off in costly shelters

Coal pile getting low

Can't keep warm Ears frostbitten Fingers numb

Br-r-r-r!

Only three or four days away, by quick Santa Fe train, is a sunny land, where the world is different

Farm busy every day

Stock graze green fields

Family enjoy balmy outdoors

Burn little fuel

Wear light clothing

Something always ready to market

Work easy for all

January like May

Won't you write to-day for our San Joaquin Valley land folder (California)? It's full of facts, full of pictures.

It tells all about what farmers like you are doing out there—how they make good money raising alfalfa and wheat, apricots and oranges; how they succeed in dairying and live stock, vineyards and orchards.

Only costs you a postcard inquiry.

Santa Fe personally-conducted tourist-car parties lessen travel cost.

Wisconsin Poultry Ass'n Awards

Largest of Thirteen Annual Shows Is Staged at the Stock Pavilion, College of Agriculture, Madison, Last Week.

THE Wisconsin Poultry Association staged its thirteenth and largest state show at the stock pavilion at the college of agriculture, Madison, last week. There were sixty-six exhibitors. M. C. Gerard, of Stoughton, president of the association, and James E. Halpin, of the college of agriculture, were in charge of the show. Interesting exhibits were offered by the state experiment station, including several record laying hens. A veteran Plymouth Rock held the high record of 258 eggs laid in twelve months. The following is the list of awards:

Exhibition Barred Plymouth Rocks—Wm. F. Belda, DeForest, Wis., 1st ckl., 3d ck.; Joseph Fix, Madison, Wis., 1st ck.; Dr. D. D. Culham, Stoughton, Wis., 2d ckl.; Geo. Hackett, North Freedom, Wis.; 2d hen; John F. Johns, Dodgeville, Wis., 1st hen, 4th and 5th ckl.; Ives Roberts, Fort Atkinson, Wis., 1st and 4th ck., 3d ckl., 3d hen, 1 . and 2d plt., 1st pen.

Barred Plymouth Rocks (Cockerel Bred)—Joseph Fix, Madison, Wis., 1st plt., 2d hen; John F. Johns, Dodgeville, Wis.; 2d, 3d and 4th plt.; Ives Roberts, Fort Atkinson, Wis., 1st hen, 5th plt.

Barred Plymouth Rocks (Pullet Bred)—Wm. F. Belda, DeForest, Wis., 1st and 4th ckl.; Ives Roberts, Fort Atkinson, Wis., 1st ck., 3d ckl.; Geo. Hackett, North Freedom, Wis., 1st pen; John F. Johns, Dodgeville, Wis.; 2d ck., 2d ckl.; J. N. Summerfield, Sparta, Wis., 5th ckl.

Buff Plymouth Rocks—Christ. Krugman, Madison, Wis., 2d ck., 3d ckl., 2d and 3d plt.; Arthur B. Larsen, Colfax, Wis., 1st ckl., 1st plt.; Dwight Philpot, Sun Prairie, Wis., 1st ck., 1st hen; H. F. Viteuse, Madison, Wis., 2d ckl., 4th plt.

White Plymouth Rocks—J. J. Flad, Madison, Wis., 1st and 3d ckl., 2d ck., 1st hen, 1st, 2d and 3d plt., 1st pen; Claude Skibrek, Stoughton, Wis., 1st ck., 2d and 3d hen, 4th and 5th plt.

Partridge Plymouth Rocks—Alfred Anderson, Stoughton, Wis., 1st ck.; A. V. Buth, Sullivan, Wis., 4th and 5th pen; James Flint, Oregon, Wis., 2d and 4th ck., 4th hen, 2d pen, 1st, 4th and 5th ckl., 3d plt.; H. G. Jackson, Mineral Point, Wis., 1st and 2d plt.; Geo. Hackett, North Freedom, Wis., 2d ckl., 5th ck.; M. C. Gerard, Stoughton, Wis., 3d ck., 1st, 2d, 3d and 5th hen, 3d ckl., 4th plt., 1st pen.; Ed J. Wagner, Arlington, Wis., 3d pen.

White Wyandottes—H. G. Angle, Sparta, Wis., 5th ck.; T. O. Evans, Dousman, Wis., 1st ckl., 2d and 3d plt., 4th and 5th hen, 1st pen; Paul Johnson, Stoughton, Wis., 3d and 4th ck., 2d and 3d hen, 2d, 3d and 5th ckl., 4th and 5th plt., 2d pen.; Hugh L. Templeton, Lima Center, Wis., 2d ck.; Edgar H. Zobel, Ripon, Wis., 1st ck., 1st hen, 4th ckl., 1st plt.

Buff Wyandottes—Thos. Clayton, Dodgeville, Wis., 1st, 2d, 3d and 5th ckl., 1st and 2d pen, 1st, 2d and 3d ck., 1st and 2d hen, 1st, 2d and 5th plt.; H. B. Durner, Evansville, Wis., 4th ck., 4th and 5th hen; J. R. Love, Waukesha, Wis., 4th ckl., 3d hen, 3d and 4th plt.; Robert Pribbenow, Arlington, Wis., 5th ck.

Black Wyandottes—Robert Pribbenow, Arlington, Wis., 1st ck., 1st and 2d plt.

Partridge Wyandottes—W. W. Day, Janesville, Wis., 2d and 3d ck., 1st and 2d hen, 1st, 2d, 3d and 4th ckl., 3d plt., 1st and 2d pen.; A. J. Ehrishman, Rushmore, Minn., 2d plt., 5th hen; W. H. Milward, Madison, Wis., 5th ck.; J. V. Pottier, Green Bay, Wis., 1st and 4th ck., 1st, 4th and 5th plt.

Silver Wyandottes—H. A. Davies, Dodgeville, Wis., 1st, 2d and 3d ckl., 1st, 2d and 4th plt., 1st ck.; C. & B. Reinke, Middleton, Wis., 2d ck., 4th and 5th ckl., 3d and 5th plt.; F. M. Statz, Madison, Wis., 1st pen, 1st hen.

Golden Wyandottes—Gabriel Lewis, Hollandale, Wis., 2d ck., 4th hen, 2d, 3d and 4th ckl., 1st pen, 2d, 3d and 5th plt.; Chas. Love, Waukesha, Wis., 1st, 3d and 4th ck., 1st and 3d hen, 1st ckl., 1st and 4th plt.; Robert Pribbenow, Arlington, Wis., 2d hen, 2d pen.

Single Comb Rhode Island Reds—Charles Brace, Lone Rock, Wis., 1st hen, 2d ckl.; B. A. Beach, Madison, Wis., 3d and 5th plt., 4th and 5th hen, 1st ckl., 1st ck., 2d pen.; Geo. Hutton, Madison, Wis., 5th ckl.; C. E. Copeland, Jefferson, Wis., 2d and 3d hen, 3d and 4th ckl., 1st and 2d plt., 1st pen.

Rose Comb Rhode Island Reds—Fred L. Clark, Madison, Wis., 1st ckl., 2d and 5th plt., 2d hen; J. L. Herbst, Sparta, Wis., 4th ck., 2d ckl., 3d and 4th plt; Wm. H. Laabs, Waupaca, Wis., 5th ck., 1st hen; Mrs. J. M. Murrey, Albany, Wis., 1st ck., 4th and 5th ckl.; C. J. Nelson, Cottage Grove, Wis., 1st pen and 3d ck.; Patton & Breen, Juda, Wis., 2d pen, 1st plt, 3d ckl.; Chas. Wheeler, Dousman, Wis., 2d ck.

Light Brahmas—Roy Beck, Galesville, Wis., 1st ck., 4th ckl., 3d hen, 3d plt.; John Blanchard, Columbus, Wis., 3d and 5th ckl., 1st and 2d hen, 4th and 5th plt.; Geo. Daniels, Beloit, Wis., 1st and 2d ckl., 1st and 2d plt.

White Orpingtons—F. A. Cooper, Baraboo, Wis., 2d and 3d hen, 1st ckl., 3d and 4th plt.; C. F. Swerman, La Crosse, Wis., 5th hen and 2d plt.; Russell Williams, Orfordville, Wis., 1st plt., 1st and 4th hen, 1st ck.

Buff Orpingtons—Clyde Fischer, Evansville, Wis., 1st pen, 1st, 2d, 3d and 4th ckl., 1st, 2d, 3d and 4th plt.

Black Orpingtons—L. I. Fairman, Brodhead, Wis., 1st ck., 1st and 2d ckl., 1st hen, 1st and 2d plt., 1st pen.

Red Sussex—J. A. Fiedler, Cuba City, Wis., 1st ck., 1st, 2d and 3d hen.

Speckled Sussex—J. A. Fiedler, Cuba City, Wis., 1st ck., 1st and 2d hen.

Single Comb White Leghorns—Wm. H. Laabs, Waupaca, Wis., 4th hen; J. H. Durfee, Madison, Wis., 1st, 2d, 3d, 4th and 5th ck., 1st, 2d, and 3d hen, 1st, 2d, 4th and 5th ckl., 1st, 2d and 4th plt., 1st and 2d pen; Leslie Flint, Stoughton, Wis., 3d and 5th plt., 3d ckl.; Dwight Philpot, Sun Prairie, Wis., 5th hen and 3d pen.

Rose Comb Buff Leghorns—Dwight Philpot, Sun Prairie, Wis., 1st ck., 1st plt.

Rose Comb Brown Leghorns—J. A. Fiedler, Cuba City, Wis., 1st and 2d ckl., 1st ck., 1st and 2d hen.

Single Comb Brown Leghorns—J. Sumner, Madison, Wis., 1st, 2d and 3d plt.

Silver Campines—I. R. Welch, Madison, Wis., 1st and 2d plt., 1st and 2d hen.

Rouen Ducks—Russell Williams, Orfordville, Wis., 1st ck., 1st hen.

Championships—Champion ck. and champion hen, Edgar H. Zobel, Ripon, Wis., on White Wyandottes; champion ckl. and champion plt., J. H. Durfee, Madison, Wis., on Single Comb White Leghorn; champion pen, John F. Johns, Dodgeville, Wis., on Barred Plymouth Rocks.

Preventable Fire Losses in Wisconsin.

What farmer does not worry about the fire hazard? A fire on the farm is not accompanied by any spectacular rush of fire engines. Practically all of our farms are unprotected against fire. Some attention has been given this matter in the way of erecting buildings which are more nearly fire proof and also in separating farm structures so that fire may not be so easily communicated from one building to another.

On account of the great danger of fire on the farm the farmer is naturally interested in any information which may lead him to adopt preventive measures. It is a well-known fact that a very large per cent of fires both in the country and in town are preventable. The National Board of Fire Underwriters has recently compiled statistics on the causes of fire in Wisconsin for the year 1915. The following table shows losses by fire in Wisconsin in 1915 from strictly preventable causes:

Defective chimneys and flues	$175,402 or	7.2%
Fireworks, firecrackers, etc.	2,677 or	0.1%
Gas, natural and artificial	2,182 or	0.1%
Hot ashes and coals	7,147 or	0.3%
Ignition of hot grease, oil, tar, wax, asphalt, etc.	6,059 or	0.3%
Hot or molten metal	327 or	0.0%
Matches	64,732 or	2.7%
Open fires	31,308 or	1.3%
Open lights	24,702 or	1.0%
Petroleum and its products	19,104 or	0.8%
Rubbish and litter	6,815 or	0.3%
Smoking (cigars, cigaretts, pipes, etc.)	48,849 or	2.0%
Steam and hot water pipes	2,118 or	0.1%
Stoves, furnaces, boilers and their pipes	194,336 or	8.0%
Total	$585,758 or	24.2%

The following table shows the loss in Wisconsin in 1915 from partly preventable causes:

Electricity	$209,596 or	8.6%
Explosions	66,634 or	2.7%
Exposure	255,713 or	10.5%
Incendiarism	26,965 or	1.1%
Lightning	56,228 or	2.3%
Miscellaneous, cause known but not classified	148,496 or	6.1%
Sparks—from fires	121,613 or	5.0%
Sparks—from machinery	11,821 or	0.5%
Spontaneous combustion	159,884 or	6.6%
Total	$1,056.950 or	43.4%

It can be seen from these tables that two-thirds of the fires in Wisconsin (including both fires in the city and the country) are either strictly preventable or partly preventable.

Some of the specific items may be taken up and discussed. For instance, chimneys and flues caused 7.2 of the fires reported and resulted in a total loss of $175,402. Of course, there is no reasonable excuse for a defective chimney or flue. If everyone would look after their chimneys and flues properly this loss could no doubt be cut down to $25,000 or $35,000 a year. Defective stoves, furnaces, boilers and pipes caused a loss of almost $200,000 in a year. It is needless to explain that practically all of this loss could be eliminated by proper inspection of stoves, furnaces, etc. A little more care in handling lighted cigars, cigarettes and pipes would easily cut the $50,000 annual fire loss from this cause in two. A good many of the strictly preventable causes of fires may be traced to nothing less than carelessness. This is especially true in the handling of fire boxes, ashes and live coals, grease, oil, matches, rubbish, cigarettes, cigars, etc. Because a man has thrown cigar stubs about

FIRE LOSSES IN WISCONSIN AND PERCENTAGE WHICH MIGHT BE PREVENTED.

the barn for several years and gotten away with it is no sign that the next time he does it there will not be a disastrous fire. A good breeze or draft will often keep fire smoldering in cigar stubs or ashes for a long time until finally it breaks out into a blaze.

It will pay our readers to make a careful study of the tables which are given herewith and in order to enforce the points of interest a little diagram is given showing the strictly and partly preventable causes of fire and also the unknown causes. The latter are doubtless in many cases preventable.

Law Questions.

Will of Property—Heirs Sell Shares.

A Subscriber, Oconto, Wis.—A certain man who owned property in this state died here leaving a will which reads as follows, viz: "I leave my real estate in the hands of my children, to be divided equally, and I want my children after my death, to meet together and have a consultation; I want one of my children to buy my property, and pay to the other members of my family in good security at 5 per cent." Two members of the family sold their shares to a stranger, without consulting the other members. One of them wants to buy the real estate. (1) Has said stranger a right to demand a higher price than he paid for the two shares? (2) Have the members of said family a right to sell their shares of the property to a stranger under the terms of the will?

Answer.—(1) The effect of this will was to give the property of the testator to his children equally and the provisions in the will about consultation of the heirs and one buying the others out are too vague and indefinite to be enforced by a court. The stranger has a right to demand his own price for the shares he bought. (2) They have.

The Only Standardized Tractor Design

Avery Tractors are the only make built in five sizes (a size for every size farm) all having exactly the same design. There is practically no other make of tractors where there are more than two sizes of the same design.

When the Avery Company builds one size tractor and after thoroughly testing it out, builds another size, and then another, and then another, and then another, until it has five sizes of all exactly the same design, it is unquestionable proof of the success of that design.

Genuine Kerosene Burners

Opposed motor, strong crankshaft, renewable inner cylinder walls, patented sliding frame, all spur gear transmission, no intermediate gear or shaft, no counterweights on crankshaft, no water pump, no fuel pump, no fan, no mechanical lubricator, no belts, no sprocket chains. Regular sizes—8-16, 12-25, 18-36, 25-50 or 40-80 h.p. and special 5-10 h.p. **There's a size Avery Tractor and Plow to fit every size farm and a size Avery Thresher to fit every size run.** The Avery Company has its own Branch Houses at convenient points, large repair stocks and force of trained service men to serve owners of Avery Tractors. Write for a free copy of the new 1917 Avery Catalog and name of nearest dealer.

CLEARWATER Brand Fish are the best. We are receiving daily Fresh Frozen which we can ship you at the following prices: Pike at $11 per 100 lbs. Tullibees at $7.50 per 100 lbs. Pickerel $7.50 per 100 lbs. We guarantee satisfaction. Duluth Fish Co., P. O. Box 57, Duluth, Minn.

WE can ship promptly Fresh Weather frozen fish. Pike 11c per lb. Pickerel at 7½c per lb. Tullibee Whitefish at 7½c per lb. Will fill all orders from 10 lbs. and up. Order today from the Lake Superior Fish Co., 208 E. 1st St., Duluth, Minn.

FRESH FISH shipped direct to you from the Fisheries. Pickerel at 7½c per lb. Pike at 11c per lb. Tullibees at 7½c per lb. Great Lakes Fishing Co., 521 4th Ave. E., Duluth, Minn.

Fruits and Garden

The Asparagus Bed.

People who enjoy the delicious, fresh asparagus in May will not willingly do without a bed of it in their own gardens, and when they have it started will not neglect any precaution needed to secure a bountiful crop of the tender stalks.

It has been truly said that asparagus will grow and yield fair crops with less care and attention than any other garden vegetable. But when beds are persistently neglected, and allowed to become grassy, the quality of the crop will be wonderfully improved by cleaning them out.

Set a man at work, any time between now and spring, when the surface is not frozen, and have him dig out all grass roots and weeds. It may be necessary to remove the whole surface, an inch or two deep, but it should be done. Carry this rubbish away and burn it. Of course, it is supposed that you have cut and removed the old tops before the grassing operation begins. After the sod is removed, if there is any room at all between the rows, go through with a cultivator and stir the soil. Then give the bed a good dressing with manure—preferably well-rotted barnyard compost. If that is not at hand, good, clean leaf mold is the next best thing. If neither of these be available, fine straw, or chaff, which is free from weed seed, will answer the purpose. There is an objection to coarse, strawy manure—fresh, in that it will make the sprouts tough and strong. There will be a very unpleasant taste for the first year after such an application.

After such treatment of the asparagus bed, follow it up next spring with good culture. By frequent weeding, keep down all obnoxious growths. And when you stop cutting about July 1st, give another good stirring with the cultivator. This is the way to get the greatest possible yield with the highest possible quality.

Winter Pruning.

Proper pruning of fruit trees is absolutely essential to the production of good fruit. And yet there is no other necessary work about a farm orchard so constantly neglected.

And when it is done, in the majority of cases, it is only half done. As a result of crowded limbs, and thick foliage, half of the fruit produced is of small size, and bad color.

Now, all of this inferior fruit is unnecessary, for it is entirely possible to have every apple on the tree, of good full size, and color fully up to the standard of its variety.

There is no sufficient excuse for the prevailing neglect of pruning, for it may be done in the winter time, that season of comparative leisure in the country. The months of November, December and January make up the right trimming season. If done at that time the wounds dry up, so that loss of sap later becomes impossible. But if this work is done in February and March, it is so near the period of the flow of sap, that bleeding becomes inevitable.

In pruning a tree to secure good fruit, the amount of work to be done depends upon the age of the tree, and the previous work which has been done upon it to keep it in shape.

A tree which has been entirely neglected until it is ten years old presents a hard problem when you wish to bring it into shape.

Three-fourths of the top should be removed, but as to take that amount off at once would be a serious shock to the tree. It is customary to take two years for the work, cutting out half of the superfluous branches one winter—and as many more the next year.

The wise way is never to let trees get into that crowded, overgrown condition.

When three-year-old trees are first planted, all crotches should be avoided, and for the next two years trees should be examined occasionally, and so cut as to secure a well-balanced top. For many reasons high tops are the best—high enough so as to admit a full-grown man walking about them upright.

As the trees get larger, naturally more and more work will be needed in pruning. Thrifty eight or ten-year-old trees will make an astonishing growth of wood in one season.

Bear in mind that the tops should be kept thin enough so that the sunlight can penetrate to all parts. It is light which makes perfect fruit—other conditions being favorable.

In general, remove the weakest limbs, and where two interfere cut one. Then shorten in all branches which show an abnormal growth, thus preserving the symmetry of the tree.

Water sprouts—those sappy shoots which have started since the last pruning, should be cut without mercy, except in cases where one is needed to fill a vacant place.

If you have followed the rules for pruning, you will have a spreading, open-topped tree—so scattered in foliage that it will be a poor shade tree for a hot day, but exactly adapted to the growing of large, showy apples.

Owing to the prevalence of strong southwest winds, it is best to plant trees with a little inclination to the two o'clock sun, and in pruning encourage the heaviest top on the same side of tree.

It is customary to say—make a smooth cut, and a very little thought will show the necessity of this. Nature will repair the damage, by healing over the wound as soon as possible. But if a rough, uneven surface is left, it is difficult, or perhaps impossible for the bark to cover it.

All cuts above an inch in diameter should be painted with a soft grafting wax. This is needed, because the hot sun will check the wound and water will penetrate

Healthy Grain

Seeds grow faster and mature into good healthy grain when first freed from smuts by using

FORMALDEHYDE
The Farmer's Friend

This powerful disinfectant destroys grain smuts and fungus growth. Every up-to-date farmer should use Formaldehyde. It has the supreme endorsement of the U. S. Dept. of Agriculture. Our Formaldehyde in one pint bottles costs 35 cents and treats 40 bushels of grain. Big illustrated hand book sent free on request.

Prof. Hansen's Wonderful Cossack Alfalfa

IS a big, vigorous, strong rooted variety, well adapted for the most rigorous climates. Realizing the great wealth producing qualities of an Alfalfa hardy enough to withstand the rigors of the Northern Winters, the Department of Agriculture of the United States Government selected the most capable man in this country to explore Northern China, Siberia and Asiatic Russia to secure these seeds. As a result of four different trips, enduring the most severe hardships, Prof. N. E. Hansen brought to this country the Cossack Alfalfa.

Prof. Hansen's Cossack Alfalfa

I have tested it, tried it out under the most adverse circumstances, and can therefore strongly recommend the Cossack Alfalfa Seed to you. You sow your field once and for 30 years all you need to do is to harvest your crop and pocket your returns. I am making you a special offer of 10 lbs. Genuine Cossack for $15.00, and with every order I will present you with one-half bushel New Iowa 103 White Kherson Oats. Reserve your 10 lbs. at once. I will ship it at any time you specify, but order now.
For further information, send for my big 1917 160-page Catalog—it's FREE. Gurney Free Service Booklets also contain valuable information—specify the kind you want.

Quack Grass Can Be Killed Out.

Minnesota Experiments Show Pest May Be Eradicated by Practical Means—Proper Tillage Is First Essential.

QUACK grass is a serious pest in many parts of Wisconsin. Its rapid means of propagation and growth has permitted it to overrun wide areas in a few years' time, and crop yields in fields infested with it have often been reduced from 20 to 50 per cent, or more. In many cases bankers will not accept, as security for loans, land infested with quack grass, because crop yields on it are so uncertain. For these reasons every effort should be made to keep it in check and prevent its spread into uninfested territory. Although its eradication is difficult, it may be stamped out by certain tillage methods which have been learned by a study of the plant and its habits.

Several years ago the Minnesota Agricultural Experiment Station made a series of experiments designed to test the methods by which quack grass might be killed out by practical means. The results of these experiments showed that the work could be done and a crop grown on the land every year, if a proper rotation is adopted, in connection with thorough tillage methods, or if the land is cropped continuously to a cultivated crop which can be removed from the land early enough in the season so that the young quack grass can be kept down by plowing and disking during late summer and fall.

In order to understand the methods of fighting quack grass, it is necessary to know something of its nature and habits. This pest is a perennial, which propagates by means of seeds and underground stems. The seeds may be carried long distances in feed, baled hay, grain and straw, and when dropped on the soil, will germinate and grow. For the first two or three months after the young plants begin to grow, they may be killed out as easily as young wheat plants, but after the underground stems form, the task becomes very much more difficult. The seeds ordinarily ripen during July and August, and some of them, under favorable conditions, will germinate in the fall and make a good growth before winter, while others will not germinate until the following spring.

While quack grass usually is introduced by means of seeds, it spreads mainly by underground stems, which may send up a shoot at each joint to develop a new plant. It is against these underground stems that the war of extermination must chiefly be waged. On undisturbed land they lie near the surface, but on plowed land they become scattered throughout the furrow slice. If the underground stems can be buried seven or eight inches deep, the shoots are not likely to reach the surface and develop into new plants. Without these new plants the underground stems die, since they are needed to build up food compounds for the underground parts. Therefore, the most satisfactory means of eradication are deep plowing, to bury as many of the underground stems as possible, and subsequent harrowing and disking, to destroy any plants which chance to break through the soil.

The Minnesota experiments showed that there were several rotations which could be used in the corn belt that would give an opportunity to kill out the quack grass by tillage methods, without losing the use of the land during any year. Among these a four-year rotation of grain, hay, corn and corn proved the most satisfactory, and probably would be best adapted to the infested farms of northern Iowa. In this rotation, as followed by the Minnesota station, a crop of wheat or oats was grown the first year, in which was sown clover and timothy seed. The next year the crop of clover and timothy hay was cut in July, and the land plowed as soon as possible, in order to bury deeply the underground stems of quack grass and destroy the growing plants. Then the field was disked whenever the young plants appeared above the surface of the ground. The disking was kept up during the rest of the season and the following spring, until corn-planting time. On most fields seven or eight diskings were necessary. When the corn crop was planted and had started to grow, thorough cutlivation was commenced, so that the quack grass could not get a start, and as soon as the cornstalks were large enough to be safe from injury, the ground was thrown against them in order to cover up any quack grass which had come up in the rows. The following year the land was planted to corn again and treated in the same manner. This treatment completed the eradication of the quack grass. In preparing the seed bed for grain, the careful use of the harrow was effective in dragging quack-grass plants to the surface, where they were killed by exposure to the sun and wind.

According to the plan of the rotation, it was necessary to put two fields in corn the first year, and greater difficulty was experienced by the Minnesota station in getting rid of the quack grass on these fields than on either of the others, a fact which shows that it is better to plow under as much of the pest as possible before attempting to keep it down with a cultivated crop. The surest method is to begin the attack by plowing the land just after the first hay crop is removed, and then keep the land thoroughly worked until corn-planting time; after this, frequent corn cultivation will keep the young plants of quack grass from coming up. Tillage given now and then, when no other work is pressing, is useless for eradicating quack grass. The work must be well planned and an attack made whenever the young shoots show green above the ground. In the Minnesota experiments, the cost of this work, in addition to the labor ordinarily required in growing the crops, averaged $8.71 per acre. This is the principal cost; no implements are required other than the plow, harrow and disk, used on the ordinary farm, except that a jointer should be attached to the plow in order that all weeds may be completely turned under. Without thorough plowing, the work of eradication becomes almost impossible.

In the experiments, it was found that quack grass persisted longer on the back furrows than anywhere else in the field. This was attributed to the fact that, in striking out the land by the ordinary method, a strip of sod was left unturned. For this reason a new method was recommended, as follows: Instead of throwing the second furrow slice against and overlapping the first, the second is cut just under the first furrow slice and both slices are turned back toward the first furrow. This permits all the land to be turned, which is important in order to bury all vegetation.

Although a four-year rotation was most satisfactory in the Minnesota experiments, a five-year rotation of grain, hay, hay or pasture, corn and grain worked very well. In this rotation, the attack on the quack grass was begun by plowing the hay or pasture land after the crop had been utilized. Then disking was kept up during the rest of the season and the following spring until corn-planting time. The corn was thoroughly cultivated as soon as it became large enough, and all young plants of quack grass were turned under. By this procedure, the eradication of the pest was completed during one round of the rotation.

A three-year rotation, consisting of grain, clover hay and corn, was also used with success. The work of eradication was the same as that outlined above with regard to the five-year rotation. In actual farm practice, the three-year period has the advantage over the five-year, in allowing more frequent attempts at eradication in case they are not entirely successful at first, but the methods are the same in either system. The four-year rotation is probably the best, since it provides two cultivated crops in succession and thereby permits thorough tillage during a longer period.

Successful methods for the control of the foot-rot of sweet potatoes, a serious and destructive disease in several states, have been developed by the specialists of the department.

The Winning Light Six Values At the Shows

SIDE by side with cars of the highest price—where the public has an opportunity to compare—Velie Values *at the Velie's low price* are the wonder of all the seasoned motorists.

Better construction is not put into the automobiles of 1917 than you get in the Velie at $1135. Consider the features one by one. See the beautiful new Velie bodies, with their deep tufted genuine leather upholstery—their snap and style—their low cost per mile.

Here is power economy and luxury to satisfy the hardest to please. Eight body styles give a range of choice for every need. Catalog on request.

Bigger—Better—More Power

Our Big Free Book

Points the easiest, cheapest and quickest way to pull and *remove* your stumps.

Land clearing is not the time consuming, money consuming, back breaking, heart breaking, never ending job it once was, if you clear your land by the Kirstin Method. This method pulls your stumps, clears the pulled stumps from your land and guarantees a saving of 10% to 50% over any other method. Before you clear another foot of land, find out what the Kirstin Method can do for you.

Kirstin Pullers are the very last word in up to the minute, twentieth century land clearing machines.

Thousands of users testify to their superiority. There is a puller for every need. No matter what your clearing problem may be, there's a Kirstin to solve it.

Kirstin Stump Puller

One Man — Horse Power

No stump is too big for the Kirstin Horse Power Puller. Its mighty strength is irresistible because of its triple power and other exclusive Kirstin features. It will clear more than two acres at one setting without strain to man, horse or machine. It has been a leader for 21 years.

One man without horses can pull the biggest stumps, too, with the Kirstin One Man Stump Puller. A little push on the handle gives tons of pull on the stump. This enormous power is developed by use of double leverage. It gives an ordinary 17-year-old farm boy a giant's power.

Our Free Book gives valuable information on all kinds of land clearing. It tells all about the Kirstin line of pullers—most complete in the world—and explains Kirstin Service, forever free to all owners of Kirstin Machines. It has many photographs of stumps that the Kirstin has pulled, and letters from the men who pulled them. Don't buy a puller until you read this book.

Big Money to Early Buyers To first buyers in every locality we offer a special opportunity to join in our profit sharing plan. No canvassing; just a willingness to show your Kirstin to your neighbors. Don't wait—send the coupon today.

A. J. KIRSTIN CO., 5543 **Ludington St., Escanaba, Mich.**
Largest Stump Puller Manufacturers in the World

SEND TODAY FOR FREE BOOK—"THE GOLD IN YOUR STUMP LAND"

Remember, the Kirstin Method saves you from 10% to 50% over any other way of clearing land for the plow. This claim is supported by a Money Back Bond.

GOOD MEN WANTED TO LEARN THE AUTO BUSINESS

Any ambitious, capable young man can make a success for himself, and if you will only prepare yourself, **you will get work,** because **positions are open,** waiting for competent men to do Auto and Electrical work.

The **American Auto College** develops your talent for a splendid, big paying trade. Our course has been enlarged with lots of new work—principles of Knight Motors, 8 and 12-cylinder Engines of new models, Tractors, new Starting Systems, Magnetos, Wiring, Coils, Welding, Brazing, Lathe work, Milling and Drill work, Tool making, Overhauling and Repairing, and all the newest, up-to-date Auto equipment.

AUTO College

$900 TO $3,000 SALARY OR BUSINESS PROFITS PER YEAR

Positions Are Open Tinker repair men are let out as fast as good men are found to take their places. Garage men, letters and telegrams come to us asking for good men. Just prepare yourself and your future and success will be started. Think of the good time, and the money you can make.

LIFETIME OPPORTUNITY—It's up to you to be either a common, hard-working laborer or else learn a good business. Thousands of men will go into the Auto business within the next year. Be one of them. We want you to. Get started right away. Learn here where the opportunities are greatest and best, by our system of actual work in our large shops. No books used; **we furnish tools.** You do the work yourself. Our men learn easily and quickly because practical work is the best.

Big Electric Starter and Tractor course **FREE** with the regular Auto course. Write for our big **FREE** Catalog **now**.

SOLVE THIS PUZZLE

Here is the "Missing Number Puzzle" which will make you think. What numbers placed in the vacant squares will make a total of fifteen for each column when added either up and down or across?

Is It Easy? If you fill in the missing figures and send us your name and address, we will send you as a prize, **a Valentine surprise package, containing 36 beautiful assorted Valentine cards, stamps and novelties. This is one of the most artistic Valentine packages put out.** All you have to do is to enclose 2 two cent stamps in your letter to pay postage and cost of mailing. We will also send a certificate of entry in our grand contest for a $395 Saxon Automobile.

Saxon Car Given Away

Remember the Saxon car will absolutely be given away at the close of the grand contest. In case of a tie, a Saxon car will be given to each person so tied. Send at once so you can be entered in this great contest. Full particulars free.

SAXON EDITOR, 378 Popular Bldg., Des Moines, Iowa

Butchering Hogs on the Farm.

An Outline of the Methods of Dressing and Curing Pork Which Are in Common Use Among Farmers.

BUTCHERING hogs and curing the meat on the farm has decided advantages over selling off all the hogs and buying back meat as needed for home use. It saves for the farmer the profits of the packer and meat dealers and provides a supply of fresh meat which is always conveniently at hand when wanted. But more important than these advantages is the satisfaction of eating farm-cured hams and bacon that have a flavor and relish which no packing house product can equal.

Dressing and curing pork on the farm is not difficult; the equipment need not be expensive; and the work may be arranged for the late fall or early winter when other work is not pressing. The first essential, perhaps, is to have an accurate knowledge of how farm butchering is done, and it is

Fig. 1—Arrangement of scalding barrel and platform.

the aim of this discussion to present first-hand information on the subject as it has been gathered from farmers who have had experience in the work.

In preparing hogs for slaughter no feed should be given them for from twenty-four to thirty-six hours before killing, but plenty of fresh water should be provided and the animal allowed rest and quiet. These precautions will make the carcass better colored and more attractive. Only fat hogs should be used if possible, because they yield a much better quality of meat than unfinished hogs. Furthermore, no animal should be used that is not in good health.

The necessary equipment for hog butchering consists of a six or seven-inch curved knife for skinning, a six-inch sticking knife, a candlestick hog scraper, an ax, a meat saw, a gambrel for hanging up the animal by its hind legs and an iron kettle for heating water, having a capacity of about twenty gallons.

In addition to this equipment a bar-

Fig. 2—Opening a hog to remove entrails.

rel for scalding and a low table or platform for scraping and cleaning the hogs should be provided. For convenience the barrel should be arranged to lean against one end of the table, as shown in Fig. 1. With this arrangement the hog may easily be pulled upon the platform from the barrel in which it is scalded, so that scraping and cleaning may take place without delay. The fire for heating the water should be as near at hand as possible in order to reduce the amount of handling and prevent cooling of the water before it is used.

The animal may be killed by sticking or may be shot with a .22 rifle before being stuck. Two men can stick a hog with very little difficulty if one of them reaches under the animal and, grasping the fore and hind legs on the far side, turns the animal over onto its back and holds it there while the other man forces back its snout with his left hand and uses the knife with his right. The knife is thrust into the animal's throat just above the breastbone and directed toward the root of the tail with the sharp edge up. Then it is given a quick thrust to the left and withdrawn. This movement cuts the arteries just inside the breast bone. Care should be taken that the knife is inserted straight in order not to bruise the shoulders and thereby reduce the value of these parts.

When the hog shows no signs of life it is dipped in the scalding barrel which is shown in Fig. 1. The water should have a temperature of from 185 to 195 degrees Fahrenheit; if hotter than this it will cause the hair to set, which makes it very difficult to remove; if colder, say from 165 to 175 degrees, it will scald the hog, but takes a longer time. From one-half to three-quarters of a minute should be sufficient time for scalding so that the hair will start readily. All parts of the hog should be scalded uniformly. A shovelful of ashes or a tablespoonful of lye put into the water will loosen the scurf on the skin. After scalding is finished the hog is pulled upon the platform or table and scraped with a candlestick hog scraper. The hair should be removed from the head and feet first, since these parts are hardest to clean. On spots where the hair or

Fig. 3—Shoulders, trimmed and untrimmed.

scurf will not come off readily gunny sacks may be applied and hot water poured on. This method may be employed to scald the whole hog in case it is too large to be dipped into the barrel. When most of the hair and scurf are off the skin is soaked with hot water and shaved with a sharp knife.

Then the carcass is hung from a limb of a tree or a pole or ladder, as shown in Fig. 2. A gambrel made from an old singletree may be used to support the carcass. Its ends should be sharpened and inserted under the tendons of the hind legs just below the hocks. After hanging the carcass it should be washed and scraped to remove all dirt and scurf. Then it is cut open. To do this, split directly through the joint between the hind legs and run the knife down the belly line, taking care not to penetrate too deeply and cut the stomach and intestines. When the knife is used in the right hand the left hand should follow the blade and the first two fingers of this hand should be placed on either side of the blade to control the depth to which it cuts. A glance at the drawing in Fig. 2 will make this clear.

Next the rectum is cut loose and pulled downward in order that it may be removed with the stomach and intestines. These parts are then removed, the cords which hold them in place being cut whenever necessary. When the entrails are all loosened down the diaphragm, the gullet is pulled up and cut off and the entire mass removed. Then the breast bone is split a little to one side of the middle with an ax or a knife and the pluck, consisting of the heart, lungs, liver and windpipe, is removed. The gall bladder must not be bursted; after the duct between it and the liver is cut it must be peeled off carefully

in order not to spill its contents on the meat.

In order to insure good drainage of blood and free circulation of air a block of wood should be inserted into the hog's mouth. Or in hot weather the head may be cut off just behind the ears and the backbone split with an ax or cleaver so that aeration may be better still and cooling more rapid. The gut fat should be removed from the intestines before it cools and must be kept separate from the leaf and back fat, since it has a strong flavor. The carcass should cool now for from twelve to eighteen hours, but not freeze. The best temperature for cooling is between 34 and 40 degrees.

When the carcass has cooled through, it is laid on the block or cutting table and the head removed and the back split if these operations have not already been done. Now cut through the carcass between the fourth and fifth ribs to remove the shoulder and trim up this part by taking out the ribs and neck bones and cutting away the flesh down to the top of the shoulder blade. The lean meat is saved for

Fig. 4—Carcass of hog showing how cuts are made to separate the head, shoulders, middle and hams.

sausage and the fat for lard. Then remove the foot from the shoulder just above the knee joint, as shown in Fig. 3. Next cut the hams from the carcass about two inches in front of the hip bones, running the knife diagonally from the flank toward the root of the tail. Fig. 4 shows this cut. The two hams are then separated and trimmed to the shape shown in Fig. 5, the foot being removed just above the hock.

The next step is to remove the leaf fat from the middle if this was not done when the hog was cleaned. Then remove the spareribs, cutting as close to the ribs as possible in order to leave the lean meat with the bacon, thus improving its quality. The middle now consists of the back strip and the bacon strip. Separate these parts by making a cut parallel with the backbone, starting at the rear end just below the loin. This makes the back strip about one-half the width of the bacon strip. Trim the bacon strip to the shape shown in Fig. 6, b, and cut the fat from the lean meat on the back strip, saving the fat for lard. The lean meat is used for chops and roasts.

The tongue should now be removed from the head by cutting the muscles at its base and pulling it away with a sharp, upward jerk. The head should be cut into quarters and the brain, ears, skin, snout and eyes removed. The meat left on the head may be cut

Fig. 5—Hams: (a) Untrimmed; (b) trimmed.

off and soaked in cold water overnight to remove the dirt and then cut up fine to be boiled for head cheese. The snout and ears may be pickled together with the feet.

In making sausage all the clean, fresh trimmings of the lean meat may be used. To every three pounds of this lean pork add one pound of fat and mix thoroughly by chopping or grinding. Then spread out thin and season, using one ounce of pure, fine salt, one-half ounce of ground black pepper and one-half ounce of pure leaf sage, rubbed fine, to each four pounds of meat. After adding the seasoning, mix thoroughly with the meat by grinding or chopping. If desired a little beef may be added to the mixture.

To keep for summer use the sausage should be fried down and packed in air-tight jars or in muslin bags which are rubbed with melted lard to form an air-tight covering. Smoking the sausage in these bags for from three to five hours adds much to its flavor.

For making lard, cut all fat meat, except gut fat, into pieces about one and one-half inches square and cut away all pieces of lean meat, because they will stick to the sides of the kettle and scorch, which taints the lard. Put the squares of fat into a kettle with a small quantity of water or hot lard, which will prevent burning, and cook over a slow fire, stirring the fat frequently. When the cracklings turn brown and come to the surface remove the kettle from the fire and allow the lard to cool slightly. Then strain it through a muslin cloth into a large jar. Stirring while the lard is cool-

Fig. 6—Side cuts of porl.: (a) loin; (b) fatback; (c) sparerib: (d) bacon strip; (e) trimmings; (f) leaf fat.

ing tends to make it whiter and smoother.

Curing of the hams, shoulders and bacon strips in order that these parts will keep for later use is an essential part of farm butchering. It determines both the keeping quality and flavor of these cuts. Although there are several ways of curing pork on the farm, the sugar cure is probably the best, because it is very little trouble and gives the meat ample protection from insects and vermin. In this method a brine is used which consists of eight pounds of common salt, two pounds of brown sugar and two ounces of saltpeter dissolved in four gallons of water. These amounts are sufficient for 100 pounds of meat. Boiling the mixture makes it keep and is especially necessary in warm weather. If at any time during the curing process the brine becomes ropy the meat should be taken out and the brine boiled again.

When ready to cure each piece of meat is rubbed thoroughly with salt and allowed to stand overnight. Then it is packed in a barrel, the hams and shoulders being placed in the bottom with the skin side against the sides and bottom of the barrel and the bacon strips on top. When the barrel is packed the meat is weighted down and the brine poured on. The bacon strips should remain in the brine from four to six weeks and the hams and shoulders from six to eight weeks.

Another method of curing is called the dry cure. The mixture used consists of four pounds of salt, one pound of brown sugar, six ounces of black pepper, two ounces of saltpeter and one ounce of red pepper for every 100 pounds of meat. One-half of this mixture is rubbed well over the meat, then the meat is allowed to stand in a cool place for about two weeks, after which the other half of the mixture is applied. When the meat has stood for about six weeks longer it is washed in warm water to remove the surplus curing mixture and then smoked.

Smoking aids in preserving the meat and adds to its flavor. The process is usually carried on in a smokehouse especially adapted for the purpose, but sometimes large boxes are used with good results. It is essential, however, to keep the meat seven or eight feet from the fire or it will become discolored. A good way is to suspend the pieces of meat from above on No. 9 galvanized wire hooks so that no pieces are touching one another. Hickory wood makes the best fire for smoking because it gives a particularly good flavor to the meat, but any hard woods, such as maple, may be used, and some farmers report that corn cobs make a very satisfactory fire. The fire should be in the nature of a smudge and should smoulder rather than burn brightly. With a steady, constant fire the meat may be smoked to a light straw color in from twenty-four to forty-eight hours. A piece of bacon or shoulder may be sampled to determine whether it is sufficiently smoked or not. After smoking the meat may keep well for a time hanging in the smokehouse, but it is usually best to store it in some manner to keep it for any length of time.

Smoked meat is sometimes kept in good condition by wrapping in paper and burying in a grain bin. But the better way is to wrap each piece in paper and put in a strong muslin or canvas bag, which is then tied up tightly and painted with whitewash to which glue has been added. The bags of meat should be hung in a dry, cool place where they will not touch one another and need not be disturbed until the meat is wanted for use.

DAIRY OF H. G. ANDERSON & SON, JACKSON, MINN.

"It is now about three months since we got our hired man. His name is **Hinman** and, right here, want to say he is the best ever. He milks three cows in the time that it took to milk one; and that is not all; the work is done with neatness and dispatch. No running off on Saturday evening and gone till Monday; always on the job, seven days every week.

"One more great advantage: You know the dairy cow is quite different from the society woman; she doesn't want any change of style, she wants the milking done on time, and always the same. No change of style goes with her, and that's where **Hinman** is long, he is always Johny-on-the-spot and always does his work the same; therefore, we could not afford to let him go at any price. We consider him by far the best, cheapest, and most reliable hired man."

H. G. Anderson & Son.

Dec. 14, 1915.

HINMAN MILKERS Will Surely Increase Your Dairy Profits

Because they save where the only saving is possible in a dairy. You can't save on feed without losing milk yield, but you can save on hand labor. A three-unit outfit costs less than wages and board of one hired man for six months. So simple, a boy can milk eighteen to twenty-five cows an hour.

No complicated pulsating mechanism—no air pipe lines—no vacuum tanks.

Just a simple combination of pump, vacuum in valve chamber and natural action teat cups.

SIMPLICITY THAT MEANS LOW COST

Irene's Cherry Sets New Mark.

Irene's Cherry 285828 has earned the title of "World's champion senior two-year-old Jersey." She went on test at two years and eleven months of age, and in the ensuing 365 days produced 12,567.7 pounds of milk, containing 749.87 pounds of fat. This means 882.2 pounds of 85 per cent butter and easily exceeds the record which was made by Lad's Lady Riotress Irene, the former champion.

The new champion is a direct descendant of Loretta D. and Ida Marigold. It will be remembered that Ida

IRENE'S CHERRY.

Marigold was the "best cow of any breed" in the cheese test at the World's Columbian Exposition at Chicago and St. Louis, and Loretta D. was pronounced "best cow of any breed" in the tests for "economic production of butter fat and butter" and "economic production of milk for all purposes of dairying" at the St. Louis Exposition.

It is interesting to note that Irene's Cherry is the first cow to go on official test at Fewacres Farm, located at Wauwatosa, Wisconsin. She was bred by Clark & Emery, of Belvidere, New York, and sold to Mr. F. D. Underwood, her present owner, before she was two years of age.

Making Gilt-Edged Butter.

There are a great many things to be considered in making gilt-edged, first-class butter that will bring the highest price on the market. In the first place, we should have good butter-making cows; a part of the herd should at least be Jerseys. This breed will give the butter that fine yellow color and the butter will be more firm and solid. A part of the herd, however, can be Holsteins, Durhams or any of the other milk breeds, as desired. The cows should have good clover, timothy or blue grass pasture, or, better still, if we have it, is an alfalfa field, and not be compelled to run in the woods to shift for themselves. If they are treated in this latter way we cannot expect the best results. Good, clean, fresh water is essential when wanted and they should not be compelled to drink from stagnant pools which are infested with all kinds of microbes which will contaminate the milk. Milk cows should also have some ground feed in summer as well as in winter. This can be corn and oats or a little wheat bran is good, and aside from these a daily ration of some kind of roots will be found a great help to them. The milk cow deserves and is entitled to grain the year round as well as the work horse and should be treated as well, for it pays well, as she is surely working every day. No day passes without her giving a pail of milk and just that sure she must work to produce it; therefore, she should receive the treatment of a work animal.

Butter always retails at the present time in our towns from 20 to 30 cents per pound and even higher sometimes. I have been keeping some dairy cows a good many years and I know of no better feed than good pasture during summer with some grain and shredded fodder and clover hay during winter where there is no silo, but silage is by far the cheapest and best for winter feeding.

Cows with a good, warm barn and fed on silage will do nearly as well in winter as in summer on good pasture. The stables, however, should be clean at all times, for this is one of the essentials in making good, first-class butter.

The milk at all times should be kept in a sanitary condition and we can also make better butter and more of it by having a cream separator; in fact, I should not attempt the keeping of a great many cows without one. Churn as often as is necessary to keep the cream from getting old and too sour.

The butter should be made in pound prints arranged in a tasty manner by the use of a little ice in the summer. The butter can be so arranged at all times and will be a source of pride and pleasure as well as profit to the producer and will be sought after by those who want a first-class article of food.

Subscriber.

January Butter Scoring.

To the Editor:—The next Wisconsin butter scoring will be held at the dairy school at Madison, Friday, January 12, 1917. The butter will be examined as formerly by judges who are carefully selected to pass upon its merits. It is expected that both commercial and educational judges will be present.

As a new feature which no doubt will be both interesting and educational it is planned to ask the managers from two or three creameries to send their buttermakers to participate in these scorings hereafter. Different managers will be asked each time to send their makers to Madison. In this way the boys sending butter will get the opinion of their fellow buttermakers as to the merits of their make and at the same time the buttermakers sent by their managers will derive a great deal of good from the experience. Arrangements have already been made to have two buttermakers assist in the scoring this month. Your turn will come later and we hope your creamery manager will co-operate with us in securing this benefit for you.

We will also be pleased to know if you care to participate in a "Creamery Beautiful Contest." We feel that great good will result from an arrangement for conducting such a contest. Let us hear from you on this point.

The beginning of the year is a good time to make resolutions. We hope that your plan for the year 1917 will be to improve not only the quality of the butter made at your factory but also to work for your own improvement. The aim of these exhibitions is not only to bring up the standard of butter made in Wisconsin but also to aid the buttermaker to become more proficient in his line.

G. H. Benkendorf.

The hog turns a bushel of corn into about ten pounds of pork, leaves most of the fertility of the corn behind him and concentrates the bushel of corn into one-sixth the space.

COMING EVENTS.

Wisconsin Cheesemakers' Association, at Fond du Lac, January 10th to 12th.
Sixth Annual Road School, Madison, January 29th to February 3d.
Farmers' Week (Swine Program), Madison, Wis. Beginning February 6, 1917.

Wisconsin does not raise a great deal of winter wheat. The acreage in 1915 was 101,000 and a preliminary estimate of the acreage at this time is approximately the same. Wheat was worth 95 cents a bushel December 1, 1915, and sold at $1.60 a bushel December 1, 1916.

A Holstein cow in the town of Morgan, Oconto county, gave birth last week to a five-legged calf. This calf is healthy and well and has good use of its four normal legs. The fifth leg grows out of the right shoulder, extends over the back and down the side. The fifth leg is well developed and can be moved at will by the calf.

Wisconsin farmers sowed 25,000 acres of rye in 1915, and a preliminary estimate of the crop put in the past fall is 446,000 acres. The condition of this crop given by the Federal Department of Agriculture, December 1, 1916, is 95 per cent as compared with 93 per cent a year ago and a ten-year average of 95 per cent. The price of rye December 1, 1916, was $1.32 cents a bushel as compared with 87 cents a bushel December 1, 1915.

The 1917 automobile show will be held at the Union Transfer Storage Company new building, January 24th-25th-26th. The officers of this show are: President, L. F. Schoelkopf; vice president, Rudolph Hokanson; secretary, R. H. Ritter; and treasurer, Chas. Spooner. The Wisconsin Farmer is advised that this show will have exhibits of practically every new model car for 1917.

The state tax commissioner of Madison reports that there are several counties in the state where the average sale price of land during the past year has been in excess of $100 per acre. Ten years ago there was not a single county in the state, outside of Milwaukee county, which could show such an average. The counties where the sale price per acre exceeds $100 are: Milwaukee, $226.60; Dodge $136.13; Calumet, $125.25; Racine, $118.58; Walworth, $115.60; Ozaukee, $112.25; Rock, $111.40; Dane, $110.73; Green, $110.10; Sheboygan, $07,79 LaFayette, $106.65; Waukesha, $106.63; Kenosha, $104.96; Manitowoc, $103.50; Washington, $100.73. A few counties approach the $100 mark very closely.

In discussing cheese-factory payments for milk at a recent meeting of farmers, J. L. Sammis, of the University of Wisconsin, compared a series of patrons' payments figured by the straight fat test with the correct values of the same lots of milk calculated from the average yields of cheese obtained from milks of different fat tests. He showed that, in 95 per cent of all cases among 15,000 payments studied, the straight fat test payments agreed with the calculated value within less than 2 cents on the dollar. He reported that wherever the highest and lowest fat tests do not differ by more than 1 per cent fat, the straight fat-test method gives payments so nearly correct as to be entirely satisfactory to patrons. At a few factories, less than 5 per cent of all, it is found that one or more patrons keep herds whose milk tests higher than the other milk at the factory. In all such cases, where the difference between the highest and lowest patron's test is more than 1 per cent fat, a modification of the straight fat-test method of figuring payments was recommended, called the fat-plus-six-tenths method, which was shown to give correctly payments, agreeing exactly with the average yield values in all cases. Mr. Sammis is urging local cheesemakers to attend the annual meeting of the Wisconsin Cheesemakers' Association, to be held in Fond du Lac in January. Reports of the year's work sent in from each local association would be a valuable addition to the program at the Fond du Lac meeting.

Mr. L. L. Oldham, county agricultural agent of Walworth county, is arranging for a party of farmers, 100 strong, to visit Madison February 5th-10th, during Swine Week. The Walworth county delegation will have special headquarters at one of the Madison hotels, and there is no doubt it will attract a good deal of attention.

Mr. Fred Pabst, of the Pabst Stock Farm, Oconomowoc, Wisconsin, advises us that he has sold one of his young bulls to Prof. Milton P. Jarnigan, of the State College of Agriculture, Athens, Georgia. Mr. Pabst writes us as follows:

The South is not satisfied with plain breeding. Professor Jarnigan selected a young bull by Maplecrest King De Kol by Friend Hengerveld De Kol Butterboy, that in turn is the sire of Daisy Grace De Kol with over 1,200 pounds of butter in 365 days as a four year old, Highlawn Hartog De Kol, over 1,247 pounds, Banostine Belle De Kol, over 1,300 pounds and several others with records nearly as high.

The dam of the young bull purchased is Pabst Lulu Lady with a yearly record at the age of two years and two months of 849 pounds of butter and over 20,000 pounds of milk. This heifer was sired by King Pontiac Champion, one of King of the Pontiacs' best sons with close to fifty A. R. O. daughters.

The calf is a splendid individual and we understand the Georgia College is accumulating a small, but choice herd of Holstein-Friesian cattle and it stands to reason that before very long they will be quite in line with their northern brothers who have been breeding for so many years. We are particularly pleased to see that the South is coming to the front in dairying and that they are strongly inclined toward the Holstein cattle.

This is only another illustration of the market which exists for good dairy cattle. If the breeders of Wisconsin will keep the standard high as Mr. Pabst tries to keep it, they will have no trouble in disposing of their pure-bred stock at good prices.

A great deal of interest in Wisconsin has been aroused by the Wisconsin Products' Special, which has now toured southern Minnesota, central Iowa and northern Illinois, and is winding up a very successful season with a tour through southern Wisconsin. Upper Wisconsin is getting the bulk of publicity out of this special train, and most of the products are raised in that section of the state, but Mr. B. C. Packer and his associates in charge of the train have not forgotten while in neighboring states to give the whole state of Wisconsin a good name and fame. That their work will result in a great deal of good for the state goes without saying. Already hundreds of young men have interested themselves in our upper country and they are receiving valuable information as to crops, soils, etc. There is no doubt a large number of these will come to Wisconsin to live and certainly everyone will be welcome in this state of wonderful opportunity.

A statement from Stoughton, Wisconsin, says that receipts for tobacco in 1916 will exceed by $1,000,000 the receipts of any previous season. This is a splendid showing considering the frost and hail damage which has been reported. Buyers have been busy of late picking up the odds and ends in the tobacco districts and paying as high as 16 cents a pound straight. The weight of leaf this year is very good, and $200 per acre may be the average for the tobacco season.

For correcting soil acidity one ton of burned lime is practically equal to one and one-half tons of slaked lime or two tons of ground limestone, in case all three forms are of equal grade of purity.

Dependable Spark Plugs

In winter weather your spark plugs must necessarily stand up under violent extremes of cold and heat.

The porcelain insulators are subjected to most severe strains.

Champion porcelains are a quality product, scientifically constructed and tested, and cushioned against the force of the explosions in your cylinders by specially designed and patented asbestos lined copper gaskets.

Their dependability is proverbial.

There is a Champion Spark Plug specially designed for every type of automobile, tractor and stationary gas engine.

The name "Champion" is on the porcelain of every genuine Champion-Toledo Plug.

Champion Spark Plug Co., Toledo, Ohio

It's Up to You When Your Cows Get "Off Feed"

It's mighty important that you do something for your cows when they are in this condition. But it's just as important to care for them when they are giving a good flow of milk. A cow should be fed to her full capacity if she is to be profitable. The strain of milk production is apt to overtax the digestive organs. The heavy milker needs a tonic to act on the secreting glands that produce the gastric juices that convert the food into milk. Dr. David Roberts' COW TONIC does that very thing. It contains such roots, barks, herbs, as nature would supply if the cow roamed the meadows and woods.

Dr. David Roberts' COW TONIC

is a great conditioner at all times, especially when cows are stabled or on dry feed. Cow Tonic is not a food, but a genuine tonic to act upon the digestive organs and enable cows to get full benefit of their food.

Breeding Tonic acts on organs of reproduction and gets animals in condition for sure breeding.

Cow Cleaner removes the afterbirth naturally. Heals and leaves breeding organs in normal condition.

Calf Cholera Remedy prevents scours and calf cholera. Keeps calves in continuous growth.

Calf Meal, Diolic, Badger Balm, Laxotonic and Stokvigor—valuable remedies, which should always be kept on hand.

Get Dr. Roberts' Live Stock Prescriptions at your drug store—nearly 4000 dealers in U. S. Look for and insist on getting the package that bears Dr. Roberts' picture. If you do not already have the 184-page "Practical Home Veterinarian," treating all diseases of all live stock, send $1.00 and receive it by mail, postpaid. Address

DR. DAVID ROBERTS VETERINARY CO.

Best Prices for Furs

How *much* we can give for furs, not how *little*, is always the question with us. We pay bigger prices because this method gives us first chance at *best* furs, and manufacturers come to us for their supply. Trappers, hunters and farmers all over the country send catches to us because they know no one else *could* pay more or *would* pay so much. We will take your furs, too, on the same basis. Write at once and get our price list early. We tell you about every change in the market. You get the prices shown. No deductions for commission or transportation. Liberal grading.

UPPER WISCONSIN

Where Spraying Brings Results.

To the Editor:—We treat our potato seed with corrosive sublimate about two or three weeks before planting. We use the solution 1,000 to 1 and use it four times. The first time we leave the potatoes in it one and one-half hours; second time one and three-fourths hours; third time two hours, and fourth time two and one-fourth hours. But if potatoes are very dirty it is not advisable to use it the fourth time, as the dirt weakens the solution. We use four barrels for treating. We set them on two low horses with planks across for them to rest on and we have plugs in the bottom of the barrels to draw the solution off. (You can't use anything but wood when you are treating with corrosive sublimate). Set your barrels on your platform and fill them up with potatoes and pour the solution over them. Be sure they are all covered and when they have soaked the required length of time draw the solution off the first barrel and dump the potatoes out on the grass to dry. (It is always best to choose a warm day when treating seed out of doors so they will dry fast) and fill your barrel up with potatoes again and pour the solution back and go to the next barrel, etc., and as fast as the potatoes dry out on the grass you can put them back in the crates or bags and put them away until cutting time. (Be sure to keep them away from the stock.)

We generally plant our potatoes from the 20th of May until the 1st of June. We cut our seed large and always cut down through the seed end, as the closer to the seed end the stronger the eyes are. We use a two-man potato planter and plant in drills thirty-six inches wide and from fifteen to eighteen inches apart in the drills and plant them four to five inches deep.

On our sandy loam we find fall plowing is the best. We always turn under a green clover crop and on that we use from 400 to 1,000 pounds of 1-8-3 fertilizer put in with an attachment on the potato planter.

We spray with Bordeaux mixture to prevent blight. We seldom have to spray for early blight. We start before blossoming time and spray four times, allowing from ten days to two weeks between sprayings. We use arsenate of zinc for killing the bugs and have gotten better results with it than Paris green. We get the Bordeaux zinc already mixed and put on the Bordeaux mixture and kill the bugs at the same time.

At digging time we dig our seed for next year with forks, keeping the hills separate as they are dug and then go and select all the high-yielding hills that have nice type and are free from any disease. This way you can rid your field of disease and increase your yield. We dig all the rest of our potatoes with a digger and pick them up in crates.

We grow the Green Mountain and Early Ohio potatoes. We have tried most all of the other standard varieties, but have found the Early Ohio and Green Mountain will produce the best in our sandy loam. We have raised 375 bushels per acre with Green Mountains. This last season, although it was a very unfavorable one, our Green Mountains went 185 bushels to the acre on fourteen acres and our Early Ohios went 212 bushels per acre.

We took first prize at the Oneida County Potato Show this fall in both Green Mountains and Early Ohios and at the state show we took first in Early Ohios and third in Green Mountains.

Farmers' Packing Plant at Wausau, Wis.

(Continued from page 1.)

izations Mr. Hoopman says the yards would be overflowing one week and empty the next.

Farmers at some particular shipping point organize a local association and the company appoints a manager whose pay comes from an assessment of 6 cents per hundred on stock shipped. He receives, marks and ships the stock, makes up the records and the company pays the manager on the basis of the Wausau weight. The manager furnishes the assistants needed, marking equipment, feed, bedding, ice, etc., so that the charges against the farmer are very small and, therefore, his income the maximum.

These associations also establish a sinking fund, raised by an assessment of 3 cents per hundred, which is used to meet unusual expenses such as losses in transit, etc. Some animals may be crippled or may die en route and the owner is reimbursed out of this sinking fund. When the stock reaches Wausau it is weighed, and shrinkage, freight and percentage for sinking fund deducted. Then the manager is sent his check; a complete record is furnished the farmer or shipper so that he knows where every penny was spent. This record shows the tag number, animal, home weight, shrinkage, sales weight, price per 100 pounds, gross amount, freight, sinking fund, manager's commission, any miscellaneous charges and the net amount. Then the company mails a check direct for the net amount and there are no grounds for argument.

Shipments are regulated by the company keeping in constant touch with the local managers. Each association has specified shipping days and two or three days in advance the plant calls up the manager and asks him what he expects to ship. If the prospective shipments fall below the demand some other association is asked to fill in and if one association has a car arrangements are made to ship jointly with another association in order to make up a car and cut freight costs. The entire plan is one for conserving the interests of the shippers and the plant at the same time.

When the stock reaches Wausau it is turned into the company yards to await slaughter. After the farmer's records have been made up it is then a matter of killing, dressing, storing and selling the dressed meat. Much of the output is consumed in that vicinity, though many long shipments are made. Another advantage to the stockholder and shipper is that the books are always open to his inspection and he is in touch with the management which is not possible when shipping to Chicago or elsewhere.

The plant handles on an average about 500 hogs per week, 150 to 200 cattle and 200 to 300 calves and a general packing business is done as shown by the following lines of stock carried:

Dressed Beef.—Such grades as prime, choice, good, medium and common.

Beef Cuts.—Loins, ribs, chucks, rounds, plates, flanks, shanks, suet and trimmings. Also smoked and cured beef.

Dressed Veal.—Such grades as choice, good, medium, light and heavy.

Veal Cuts.—Saddles and racks.

Dressed Lamb and Mutton.—Such grades as choice, good, medium and common.

Lamb and Mutton Cuts.—Saddles, legs, loins, rack, short rack and stews.

Dressed Hogs.—Grade as follows: Heavy, medium, light, choice and good bacon hogs.

Pork Cuts.—Hams (cured, smoked, rolled or cooked) regular, short cut, skinned, boneless, rolled and long cut.

Shoulders.—(Cured, smoked, rolled or cooked.) Boneless, picnic, rough, regular, skinned, square, New York and New Orleans.

Butts.—Boston style, Milwaukee, boneless, cottage and New England.

Trimmings—(A), (B), (X), (XX).

Loins.—Regular loins and loin rolls.

Backs.—Short rib, short clear, short fat and long fat.

Bacon—Dry salt, sweet pickle and breakfast.

Barrel Pork, Cured.—Clear plates, regular plates, fat back pork, bean pork, prime mess pork, lean belly pork, extra prime mess pork, brisket pork, family back pork and ham butt pork.

Lard.—Kettle rendered leaf lard, refined pure lard and prime steam lard. Lard will be put in tins, wooden pails, tubs, barrels or tierces.

Sausage.—Choice grades of pork sausage, special summer, Frankfurters, tonque sausage, Berlin, New England luncheon, Minced, liver, Braunschweiger, blood, bologna, head cheese and various grades as trade demands.

Offal.—(Pickled, fresh and cooked). Pigsfeet, tripe, tongue, ears, snouts, rinds, kidneys, hearts, trimmings, cheek meat, tails, sweetbread and spareribs.

Inedible Products.—Grease, white and brown. Tallow, A and B commercial.

Fertilizer.—Onground and blood, also dried bones.

Hides Cured.—Grades as beef, cow, bull, kosher, native, western. Also calf and slunk hides and sheep pelts. Sinews and switches.

The officers are: J. D. Christie, president; W. R. Happe, vice president; H. E. Schuler, secretary; Ben Lang, treasurer; L. C. Hoopman, manager; C. H. May, auditor. The directors are: M. Hutchinson, C. Aggen, O. A. Stollen, Jens Stigson, E. H. Hicks, Frank Thompson, A. E. Kriewaldt, Francis Durst, P. A. Hemmy and Hugo Peters.

Come to Detroit
The Automobile Center and
LEARN THE AUTOMOBILE BUSINESS

33,000 sq. ft. of additional floor space

Detroit trained men get preference and get jobs quickly. No other city can give what Detroit offers. Think what it means to learn in the Michigan State Auto School. Factories endorse our school, glad to employ our graduates or offer them territory in which to sell cars and start garages. Unlimited opportunities. You're right in the middle of the greatest auto activities. Men are needed everywhere as testers, repair men, chauffeurs, garage men, and salesmen. Hundreds of our graduates start in business for themselves.

Earn $75 to $300 a Month

We teach you to handle any auto proposition. You graduate in from ten to twelve weeks. **Our equipment is complete.** Students actually build cars from start to finish, getting factory training in assembling, block-testing, road-testing, everything. Special complete course in Oxy-Acetylene brazing, welding and cutting separate from regular course. All leading types of starting, lighting and ignition systems in operation. Learn to time motors, rebore cylinders, adjust carburetors, magnetos, valves and bearings quickly and accurately. Six-cylinder Lozier and 8-cylinder King are used for road instruction. We have a new Chalmers "6-30" chassis with 3,400-r. p. m. motor, the latest thing out, also a 1917 Detroiter-6, and an Overland. Just added Delco System as used in Buick, Hudson and Packard Twin "6." We have also installed a 1917 Willys-Knight complete chassis in the shop for students to work on.

Detroit Is the Place to Learn---Start Any Time

There are 44 auto factories in Detroit, and 140 accessory and parts factories. Our students have the privilege of going through any or all of them. We now **operate Westinghouse Auto-Lite and Bijur Service Stations.** After careful consideration the Westinghouse Electrical & Mfg. Company, the Auto-Lite Company and the Bijur Co. decided that our school was the best place in Detroit to handle their service stations. This has added thousands of dollars' worth of equipment and makes our electrical department unequaled. Students get actual experience and training in handling all kinds of electrical auto equipment and taking care of trouble. We have just installed a Sprague Electric Dynamometer for block-testing purposes for students' use. Auto factories need Dynamometer men constantly. We have a greater demand for our graduates than we can meet. Factories and Garages are paying big salaries to men who **know** how to handle electrical equipment quickly and properly. Detroit is the automobile center. You get practical instruction. Come to our school and learn the auto business right. School open all the year. Enter classes any time, any day. Three classes daily: Morning, afternoon, evening.

There is a great demand for Michigan State Auto School students. Garages throughout the country write us for men. Auto factories write and phone for men constantly to fill permanent places. Why not fit yourself for one of these good paying positions?

Money Back Guarantee

We guarantee to qualify you in a short time for a position as chauffeur, repair man, tester, demonstrator, garage man, or automobile dealer, paying from $75 to $300 monthly, or refund your money. We have constantly more requests for Michigan State Auto School Graduates than we can supply.

Follow the Crowd to the Michigan State Auto School—Come to Detroit.

This Is One of the 1916 Classes.

Factory Co-operation We have completed arrangements with the Auto factories to put them in touch with men who intend going into business for themselves. Think of getting inside information as to the best territory and where the garages will make the most money. The factories are looking for trained men to represent them. Men who know the auto business from A to Z are in biggest demand. Come here and start right—get the information first-handed and don't wait.

Act Quickly—Now—DON'T WAIT Fill in the coupon and mail it now. Get full particulars and "Auto School News" and New Catalog. They are both absolutely free. Or better still, jump on the train, as hundreds have done, and come to Detroit, the "Heart of the Automobile Industry," and learn right.

Additional Building and Equipment 33,000 sq. ft. of additional floor space in our new building, thousands of dollars' worth of new equipment, plenty of room for students to work. This comes with our new building at 687-89-91 Woodward Ave.

Our school has grown by leaps and bounds, students come from all over the world. Men have left after graduating and started business for themselves; others have accepted good jobs both in Detroit and over the country. Their work has proven that we train them rightly. We are constantly adding new equipment. Our students get the best and latest things to work on. Our electrical department is thorough and complete. It is in charge of one of the most competent electrical instructors. Remember, you can enter classes any time, any day. The price of course is based on giving full value. Therefore we cannot give another course free. Graduates in the complete auto course are competent to handle farm tractors. Act quickly--now. We have no branches. Write or come direct to this school.

WANTED to hear from owner of good farm for sale. Send description and price. Northwestern Business Agency, Minneapolis, Minn.

NEWS OF THE SALE RING

Minnesota Breeders' Short-horn Sale.

The first sale of Short-horn cattle held January 3d, at South St. Paul, Minn., under the auspices of the Minnesota Short-horn Breeders' Association was a grand success in every respect. The show, preceding the sale was very interesting and inasmuch as this was only for the small farmer and breeder, a great deal of interest centered around the placings. Col. H. O. Tellier sold the offering in a very satisfactory manner and worked hard for the success of the sale. We follow with a complete list of the cattle and buyers:

BULLS.

Archer's Monarch, Jan., 1916, Chas. H. Chamberlain, Mora, Minn., $675; Avon Laddie, Oct., 1915, C. Lexbold, $115; A Village Cumberland, Aug., 1914, Wm. Vanderhyde's Duroc Jersey Sale.

F. S. Vanderhyde, West Concord, Minn., started the ball to rolling, January 2d when he sold fifty-two head of Duroc Jersey bred sows at the satisfactory average of $62.35. Col. H. S. Duncan made some timely remarks in his opening address. We follow with a list of all selling for $50 and over:

(Concluded on page 23.)

HERE'S something curious about W-B CUT Chewing—it takes less out of your pocket and puts a better chew into your mouth. No big plug sagging your pocket, no big wad sagging your cheek. Half as much of this *rich* tobocco goes twice as far as ordinary plug. W-B saves your *silver* and gives you a silver-lining feeling of happiness all over. You can't help from telling your friends about W-B.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Dropping Boards Essential For Cleanliness.

To the Editor:—In going about the country, one seldom sees the dropping boards in use on the farm. The dropping board has, for a long time, been considered necessary in order to preserve cleanliness. The filth made during the long winter nights is accumulated in one place, kept off the floor, out of the litter, and can be removed daily if desired without much effort.

In some cases the droppings are removed but once a week, and in that case become a great breeding place for lice. Where dropping boards are used, they should be cleaned at least twice a week for small flocks and every other day with large flocks. The advantage of using dropping boards gives the hens more floor space and the room for a given flock need not be as large as where dropping boards are not used. The advantage over the dropping boards is that it saves labor, is more sanitary, and takes better care of the manure, as the droppings otherwise drop to the floor and are mixed with the litter, and soon make a dirty litter for the hens to scratch in. The house is not only kept cleaner than otherwise, but it is easier to keep it clean.

If a dropping board is not used and the droppings are allowed to fall on the litter, the chickens will walk over this and carry it out among the clean litter, and in many cases get a good deal on the feed as they scratch it over. Then, again, the litter soon becomes dirty, and in this case means the cleaning out of the house more often.

Dropping boards should be removable, and should be just wide enough to pass through the henhouse door, and in this case it will take but a few minutes to pick them up and carry them up and carry them outdoors for a thorough cleaning. It is a good idea to have two sets, so when one becomes foul, carry that set out and use the other, leaving the first one out for a month and there will be no danger of any mites being on it. One should sprinkle a light coat of ashes over the boards; this serves two purposes: First, it dries up the droppings, and second, keeps the vermin from hatching or living after they are hatched.

These dropping boards suggested are usually made of matched lumber and two inches deep, covered with light tin sheathing, which makes them vermin proof and easily cleaned. These boards slide onto the dropping board platform, and in this case are removable at any time. Where the ordinary plan is used, allowing the droppings to fall on a permanent dropping board that is not removable, filth at times becomes settled in these cracks, and in these cracks are found mites, that the poultry keeper had never expected seeing. These cracks as a usual thing are never cleaned out at the time the boards are cleaned off, and here is found a breeding place for mites.

By using the removable dropping boards, as suggested, the roosting quarters are kept more sanitary, more easily cleaned, and less cracks for mites to enter. F. F. Hunstock.

With Duluth and Superior to the north, St. Paul and Minneapolis to the west, Lake Michigan on the east with its numerous shore cities and abundant lake traffic and Chicago to the south the Wisconsin farmer is surrounded with most ideal markets for his products.

Common Sense in Handling Chickens.

IN A few weeks we will be in the midst of the hatching season and thousands of Wisconsin Farmer readers will be operating incubators. Some will succeed and others will fail. It is one function of the poultry department of The Wisconsin Farmer to cut down the number of failures by pointing out the pitfalls in the business. Possibly some of our readers would be willing to take the time to describe their method of handling the flock, of selecting eggs, and incidentally reference might be made to incubator management and to the early care of young chicks. Poultry breeders as a rule are unselfish. They are willing to help a neighbor out and it is in this spirit that we want you to write a letter to The Wisconsin Farmer, touching on some of the points referred to. Your letter would be read by thousands of other breeders and what you say would be helpful to them.

"The Bull Gets with the Bull"

The Tractor That Increases Crops

HERE is one of hundreds of reports from farmers whose crops have been increased from 10% to 33⅓% by the subsoiling feature of the Big Bull Tractor. (The bull wheel runs in the furrow and loosens the subsoil with its long spade lugs, 3 to 5 inches below plow depth.)

"The past year (1916) developed the most contrary conditions for raising a corn crop that we have experienced for years. Up to July 4th, it was very wet and cold, then exceedingly dry, with a burning hot sun until the middle of September, when we had a killing frost. After all this, our yield was nearly 40 bushels per acre, due, I am sure, to the deep plowing and subsoiling of the Bull. Some of the adjoining fields not plowed by tractors, yielded only 15 to 25 bushels."

Clarence B. Waters, Gardner, Ill.

Burns Either Kerosene or Gasoline.

The subsoiling feature is only one of many exclusive advantages you get in the "Big Bull."

Can Meat For Summer.

There is a winter as well as summer canning season and it is an important one if one wishes to provide an adequate meat supply for the family during the summer months when otherwise only salt meats would be available to those far from market.

When a beef has been killed part of the meat is preserved for winter use by freezing. The remainder, including the inferior cuts, may be canned successfully. Strip the meat from the bones, using that which is well streaked with fat, or add sufficient fat to each can to give it richness and flavor. Cut the meat into convenient-sized pieces to pack closely in glass jars, and add salt and pepper to taste. Fill the jars almost full of meat, adding no water. Put on new rubbers (which should have been previously boiled for five minutes) and the tops. If glass top jars are used adjust the top spring only. In the case of screw tops screw the top on until it touches the rubber. Put the jars into a boiler or any receptacle having a false bottom and tight cover, which has in it enough cool or lukewarm water to cover the jars. Boil from three to four hours, depending on the age of the beef, counting the time from the moment the water begins to boil. Remove the jars from the boiler and tighten the covers. Do not invert the jars, as this will disturb the layer of fat which will have formed on top.

Meat canned in this way may be used cold, for meat loaf, hash or stews of various kinds. Fish, pork, chicken or any other kind of meat may be canned in this manner.

1917 Baby Week.

Nineteen sixteen was baby year. That was settled once for all by the 2,000 and more communities scattered over every state in the Union which observed the first nation-wide Baby Week. Forty-seven of the fifty cities with more than 100,000 population and 700 villages and rural communities with less than 2,500 population had baby weeks.

The 1917 Baby Week bids fair to be an even bigger, more worth while celebration than last year's, but 1916 will keep the distinction of being the year when each community's provision for the welfare of its babies was generally recognized as a serious civic responsibility.

The children's bureau at Washington has already received numerous inquiries concerning the 1917 Baby Week, and the bureau is making the following suggestions:

Have your Baby Week from the 1st to the 6th of May, if possible. This date has been agreed upon by the bureau and the General Federation of Women's Clubs as the time best adapted to the varying conditions of different states.

Remember the older babies! As one woman stated it:

It requires only twelve months for a baby to become one year old and no longer subject to the hazards of "infant mortality," but there are still many risks for him to encounter; he is still absolutely helpless, although increasingly charming, and his parents are as eager to keep him well and happy as desirous of sound advice, as they were last year. Open out the 1917 baby week to include all children still at home with their mothers.

Remember the mothers. Well-cared for, healthy mothers are necessary for the health and happiness of their babies. Find out what your community is doing to insure to every mother skilled advice and adequate care before her baby is born and during her confinement, and give the importance of protecting the mother a prominent place in the educational work of the campaign.

And one word to communities where infantile paralysis has been epidemic: Mothers should be urged to leave the baby at home during Baby Week. Any feature of the campaign involving the bringing together of numbers of babies must, of course, be omitted, but such features are not essential to the interest and success of a campaign. And Baby Week will afford an excellent opportunity for giving information as to the proper physical training of children with paralyzed muscles.

The children's bureau has a bulletin of suggestions for Baby Week campaigns which may be had upon request, and it is now preparing a revised edition describing the interesting new features reported from the 1916 campaigns.

Wisconsin Homemakers Meet.

Real economy, not merely from the dollars and cents buying standpoint, but in the matter of time and labor as well, will be seriously and practically considered by a large number of Wisconsin women at Madison, February 5th-10th, when the special one-week Homemakers' Conference will be held.

"Submerged factors" in household expenditures will be the leading theme of the course, which will consist of addresses, demonstrations, laboratory practice and open discussions. Household costs as measured in time, labor, fuel and food value will be traced and pointed out.

One of the "round table" meetings scheduled for Tuesday, February 6th, will be on "Some Unnoted Factors in the High Cost of Living." Miss Emma Conley, Miss Ada Hunt, both of the department of home economics, and Harry Kleuter, state chemist, will contribute to the interest of this subject. The preparation of economical and healthful menus for three meals a day throughout the year will be discussed by Miss Amy L. Daniels, formerly director of the work in home economics. Systems of direct marketing, means of increasing the family income, and the making of yearly expense budgets will also be freely considered.

Throughout the week sections will be held where practice work in cooking, sewing and home decoration will be available to visitors. Newer methods of home laundering to reduce the amount of labor and to increase the life of garments will be demonstrated.

Child welfare, one of the state's biggest questions, will be handled at this conference by Dr. Dorothy Mendenhall and Miss Daniels, both recognized as authorities on this subject. Special laboratory sections in this subject will be held, including work in foods and diet for infants and growing children, care of mother and child, and the use of safe, simple and economical treatment in case of sickness. Plan for local baby week campaigns will also be discussed.

"The County Nurse" will be the subject of a paper by Miss Katherine Olmstead, Milwaukee, while "Home Economics Work in State Clubs," will be discussed by Mrs. R. B. Johns, Antigo, and "Elimination of Costly Middlemen," by Mrs. Anna L. Meredith, Eagle.

Thorough and careful short courses on household decoration will be conducted by Misses Turner and Grady, and the organization of girls' canning clubs on a working basis will be explained by Miss Elizabeth Kelley, who is engaged in home economics extension work in farming communities.

Copies of the complete program will be ready within a short time and may be had by applying to Miss A. L. Marlatt, home economics department, college of agriculture, Madison.

As the homemakers' course is during the regular Farmers' Week and special Swine Congress, it will afford an excellent opportunity for many farm women to avail themselves of the work.

Cheese Box Work Basket.

To the Editor:—One of our circle who signed her letter "E. B." asked how to make a cretonne work basket. I am sending my idea and, while it may not be like the one she referred to, I think it is a very novel affair.

Ask your grocer for a cheese box and then varnish it to bring out the grain. Also varnish the legs. The

A MOST ATTRACTIVE HOMEMADE WORK BASKET.

three legs can be made of most anything you think suitable, such as molding or laths which have been smoothed. They are fastened on with thin wire nails so as not to split the box. The top of the table is made of the lid of the box "deep side up" and lined with cretonne, as is the bottom basket also. Cut the cretonne the size of the bottoms and then the side lining should be gathered on this, leaving a heading above the edges.

I am sending a little sketch which may help one in making the basket.

I use mine as a mending basket, the lower box holding stockings and such articles that need mending and the upper shallow box scissors, thread, thimble and such things. A small cushion can be made and hung on the side for needles and pins.

The legs of the basket should be made such a length as will make it most convenient for the user.

I hope my suggestion will help another "handy home" maker.

—Edith.

Recipes.

Cornmeal and Sausage Croquettes.—Four cupfuls boiling water, two teaspoonfuls salt, one cupful cornmeal, one and one-fourth cupfuls sausage meat, flour, fat for frying. Add salt to boiling water. When boiling hard add cornmeal gradually, stirring constantly. Cook and stir over the direct heat for ten minutes, then put in a double boiler and cook one and one-half hours. Stir in the uncooked sausage meat and cook twenty minutes longer. Set aside to cool. When cold shape into croquettes, dip and fry in deep, hot fat.

Sausage With Cabbage.—One pound small sausages, three cupfuls cabbage, minced, two tablespoonfuls minced onion, seasonings to taste. Fry the sausages until brown and crisp. Remove from frying pan and pour off all the fat except three or four tablespoonfuls. Put cabbage and onion into frying pan and cook five or six minutes, stirring constantly with a fork.

Graham Cookies.—One cupful sugar, four tablespoonfuls melted butter, one half cupful sour milk, one-fourth teaspoonful soda, flour to make soft dough. Roll thin and bake in moderate oven.—A. B.

Seafoam Candy.—Two cupfuls brown sugar covered with just enough water to moisten. Let come to a boil and cook until it spins a hair. Pour sugar and water into the white of an egg, beaten stiff, and stir until hard. Add one-half teaspoonful flavoring if wanted. Mold with a teaspoon and put in buttered plates.—G. Q.

On 4 Week's Trial

No Money Down—Freight Prepaid

Your choice of 38 Styles of

The Wing Piano

YES, we will ship you, on 4 weeks' absolutely free trial, a highest grade Wing Piano or Player Piano *direct from our own factory*, all freight prepaid. Your choice of 38 new art styles. Use it and enjoy it for four full weeks—then, if you wish, you may return it at our expense. You alone are the judge. No money down—nothing on arrival—no deposit. You will be amazed at our direct-from-the-factory price on the famous Wing, guaranteed for 40 years. Small monthly payments, or cash, as you prefer. But first 4 weeks free trial.

THE YOUNG FOLKS

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Helped Mamma Make a Quilt.

Dear Young Folks:—This is the first time I have written to your page. We have taken this paper many years and we all like it fine. When it comes I always turn to the Young Folks' page first, as I enjoy reading the letters.

We live in the country. My sister and I both go to town school. We are in the eighth grade. I am twelve years old and my sister is fourteen.

I have two pet cats named Toby and Tabby, and a dog named Shep. We have lots of fun with them.

We are having vacation now and I helped mamma make a quilt.

—Catherine.

Sends a Recipe.

Dear Young Folks:—I enjoy reading your letters and riddles and stories very much. This is my first letter. I am a girl eight years old. I walk to school a mile and a quarter. I am in the third grade.

We live on a farm. My papa is dead. I have a pet chicken and a calf and a mule that papa gave me.

I am sending a recipe for a one-egg cake. One large egg, one cupful of sugar, one tablespoonful of butter or lard, three-fourths cupful of sweet milk, two teaspoonfuls baking powder, one teaspoonful of flavoring, flour enough to make a good batter. Beat well. I hope some of the girls will try this and like it. —Daisy.

Taking Care of Sister.

Dear Young Folks:—I have been reading your letters and have been very much interested in them.

I live on a 640-acre farm. I have two sisters and one brother. My youngest sister is only eight months old and I take a great deal of care of her.

I go to school and am having a nice vacation. I am in the sixth grade and like to go to school. There are twenty-six pupils in our school. We play ball and other games. We had a box supper and there were a great many boxes. We took in $21.60. The teacher said she was going to get a basketball for the pupils to play with.

I had a good time Christmas and I hope all the rest of the boys and girls did, too. —A Little Friend.

Our Fashion Department.

All Patterns, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want, and inclose 10c for each number. We agree to fill all orders promptly and guarantee safe delivery.

Catalog of Fall and Winter Fashions

Send 10c in silver or stamps for our up-to-date 1916 large fall and winter catalog, containing over 400 designs of ladies', misses', and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to WISCONSIN FARMER, Madison, Wis.

1743—Juniors' dress, with two styles of sleeve and with underwaist. Pattern is cut in 3 sizes: 12, 14 and 16 years. It requires 1¼ yards of 27-inch material for the underwaist and 5½ yards for the dress for a 14-year size.

1667—Ladies' house dress with sleeve in either of two lengths. Pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6⅛ yards of 44-inch material for a 36-inch size.

1736—A comfortable apron, easy to adjust. The pattern is cut in 3 sizes: Small, medium and large. It requires 6⅛ yards of 36-inch material for a medium size.

1696—Boys' blouse suit with shield. Pattern is cut in 4 sizes: 3, 4, 5 and 6 years. It requires 3 yards of 44-inch material for a 4-year size.

1970—A very becoming and comfortable lounging robe. Pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 5⅝ yards of 44-inch material for a medium size.

1957—Skating set for ladies, misses and girls. The pattern is cut in one size for ladies, one size for misses, and one size for girls. The ladies' size requires ⅞ yard for the cap, of 24-inch material; 1 yard for the inside of muff and 1⅛ yards for the outside, of 27-inch material; ¾ yard for the scarf, of 24-inch material, and ⅞ yard for the bag, of 24-inch material.

1973—Dress for misses and small women. Pattern is cut in 3 sizes: 16, 18 and 20 years. It requires 5⅝ yards of 44-inch material for an 18-year size.

inch material for the entire dress in a medium size. Two separate patterns, 10 cents for each pattern.

1969—Girls' dress, with sleeve in either of two lengths. Pattern is cut in 4 sizes: 6, 8, 10 and 12 years. Size 8 years requires 3 yards of 44-inch material.

1953—Ladies' waist in surplice style. Pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 2¾ yards of 44-inch material for a 36-inch size.

International Sunday School Lesson.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for January 14, 1917.

John the Baptist and Jesus.

LESSON TEXT—John 1:19-34.

GOLDEN TEXT—Behold, the lamb of God that taketh away the sin of the world.—John 1:29.

John began his public ministry in the summer of A. D. 26 and the baptism of Jesus probably took place in January, A. D. 27. The delegation from Jerusalem to interview John must have appeared along toward the latter part of February.

I. John the Witness (vv. 15-18). John's ministry created great excitement. The people were in expectancy. All classes were reasoning as to who this strange, but marvelously forcful, man might be. Some thought perhaps he was the Christ (Luke 3:15). To settle this question a committee was sent to Jerusalem to investigate. Malachi, the prophet, has suggested the coming of Elijah (Mal. 4:5) before the Messiah should come, and another prophecy indicated that the prophet should be like unto Moses (Deut. 18:16-18). John freely confesses to this delegation that he is not the Christ nor Elijah nor the prophet predicted by Moses. How foolish and silly are those modern ones who profess to be the messenger of the covenant or some other fanciful title, indicating the return of the witness which is to precede the coming of Christ. John exercises humility in the way he states his real position though he does apply to himself the prophecy of Isaiah (Isa. 40:3-5) which sets forth what his mission was to be. A voice can be heard, but not seen. With our bodily eyes we never see a spirit. No man ever saw the soul of his nearest friend. We do see God, however, in his works, in his marvelous deliverances and his guidance of the world and his answers to prayer.

II. John the Baptizer (vv. 19-29). As John had denied that he was the Christ or Elijah, the priests and Levites made bold to question his authority at a later time (Matt. 21-23), and still later the authority of the apostles and the priests (Acts 5:28). John answers them with another display of his humility. His baptism in water was nothing to the baptism of the coming one (See Matt. 3:11; Acts 1:5). Though Christ was in their midst, they were blind and did not recognize him. (See vv. 10, 11; ch. 8:19; 16:3). John's baptism of repentance denotes a baptism which a penitent submitted to that he might receive the pledge and assurance that his sins were forgiven. Baptism meant the cleansing of the people from past sins that they might be fitted for entrance into the kingdom. Baptism is not conversion. It is a witnessing and a symbol of a spiritual truth that we are dead unto sin, and have risen to newness of life (Rom. 6:3-5). Like John, our voice must be not only that of humility, but it must be really a voice with a message from God, one that sounds an unmistakable note, one that can be heard wherever we go, one that will make men happier, stronger, braver, more like God, to prepare the way for Christ in the hearts of men.

III. The Witness of the Spirit (vv. 28-34). The writer is very explicit, stating the exact time that these things occurred, for he was an eye witness. John first testifies that Jesus was the Lamb of God, referring, of course, to the sacrificial lamb, the atoning sacrifice of the Old Testament (Gen. 22:7-8; Ex. 12:3; Isa. 53:7). As the Lamb of God, Jesus would take away the sins of the world; thus the thought is primarily that of atonement, a substitution of another and the deliverance from the guilt of sin. The next day after John's witness to the delegation from Jerusalem he saw Jesus coming unto him, and said to the assembled people, "Behold the Lamb of God." This refers not so much to his character, that of innocence, meekness and patience, as to his office, his completed work of atonement by the sacrificial death wherein he takes away the sins of the world. On the ground of the propitiation for sin which Jesus wrought (I John 2:2; Matt. 20:28; II Cor. 5:21; Gal. 3:13) sin is removed from the sinner as far as the East is from the West. God dealt in mercy with men before Christ's time because of the lamb which was slain from the foundation of the world (Rev. 13:8). Here John says that at first he did not recognize Jesus as the Messiah, but he does bear record that he saw the spirit descending at his baptism, and it abode upon him.

The work of Christ is for the whole world till all its sin is removed.

He is actually removing sin from the world, and when he comes again, sin will be banished. Luke's record adds that this same Messiah is to baptize with the Holy Ghost and fire.

Christians are to be on fire for God.

The gift of the holy spirit at Pentecost was the first and most manifest expression of this power of Christ who is the real baptizer. Begotten of God (Luke 1:35), possessed of all the attributes of the Father (Phil. 2:6), the one in whom the fullness of the Godhead dwelt bodily (Col. 2:9) he is to be honored and worshiped as God (Heb. 1:6).

Best and Cheapest Service in the World

Here are some comparisons of telephone conditions in Europe and the United States just before the war.

Here we have:	*In Europe:*
Continuous service in practically all exchanges, so that the telephone is available day and night.	Nine-tenths of the exchanges are closed at night, and in many cases, at mealtime.
A telephone to one person in ten.	Not one person in a hundred has a telephone.
3,000,000 miles of interurban or long-distance wires.	Not one-eighth as many miles in proportion to population and territory.
Prompt connections, the speed of answer in principal cities averaging about 3½ seconds.	In the principal cities, it takes more than twice as long for the operator to answer.
Lines provided to give immediate toll and long-distance service.	No such provision made. Telephone users are expected to await their turn.

As to cost, long-distance service such as we have here was not to be had in Europe, even before the war, at any price. And exchange service in Europe, despite its inferior quality, cost more in actual money than here.

Bell Service is the criterion for all the world, and the Bell organization is the most economical as well as the most efficient servant of the people.

TOLD IN THE HILLS

By Marah Ellis Ryan

Author of "That Girl Montana," "The Bondwoman," "My Quaker Maid," Etc., Etc.

(Copyright Rand McNally & Co.)

PART IV.---One Squaw Man.

CHAPTER II—Continued.

"Not that I know of," he said curtly. A sort of quiet antagonism had always been felt between the chief of scouts and the new commander, but this was the first time any expression had been given it, and Genesee's intolerance quickly responded to the manner of the officer that had in it both dislike and distrust.

"Then you refuse to tell me where you spent the night?"

The light in Genesee's eyes flashed sudden defiance.

"Yes; if it comes to that, and that's the way you put it, I do."

"You had better think twice before you give that answer," advised Captain Holt, his face paling with anger at the insubordination; "and another question to be put to you is: Where is the half-breed, your runner?"

"I don't know as that concerns you, either," answered Genesee coolly. "He is my Indian, and neither of us belonging to the United States army, we can leave camp when it suits us. But I don't mind telling you I sent him to Holland's yesterday."

"For what purpose?"

"My own business."

"The same thing that took you from camp at three yesterday and kept you out all night?"

"Just so."

"Then, since you refuse to answer a very necessary question, you may—until I have an opportunity of investigating an absence that is, to say the least, suspicious—you may consider yourself under arrest."

"What in—"

"For horse stealing," finished the Captain calmly.

Genesee's hand dropped to his belt in a suggestive manner, and from the door two guards stepped forward. He turned to look at them, and the ridiculous idea of his arrest quelled the quick rage that had flashed up in his face.

"You needn't have troubled yourself with these protectors," he remarked, "for I reckon there isn't much I'd want to do that they would stop me from; and as for you—this is a piece of dirty work for some end. I'm ready to be put under arrest, just to see some fun when your commander gets back. And now maybe you'll just tell me whose horse I stole?"

"It is not one horse, but one-half the stock belonging to the company, that was run off by your Kootenai friends last night," replied Captain Holt grimly; "and as your disappearance was likely helpful to them, and a matter of mystery to the command, you will be debarred from visiting them again until the matter is investigated. Even the explanation is more than your insolence deserves. You can go back to your quarters."

"It's an infernal lie!" burst out Genesee wrathfully. "No Kootenai touched your stock. It's been some thievin' Blackfeet and their white friends; and if you interfere with the Kootenais, and try to put it on their shoulders, you'll get yourself in trouble—big trouble."

"When I want your advice, I will ask for it," was the natural reply to the contradiction and half threat. Genesee walked to the door with the guards, and turning, came back.

"Captain Holt," with more of appeal in manner than one would look for in him, "I'm ready to take my chances in this business, and I'm not trying to give advice, but I'm going to ask you, on the reputation you know I have in Indian matters, to be mighty careful what you do or what you let the men do toward the Kootenai people. They're only waiting the Major's return to send word to camp that their arms and fighting braves are willing to help the troops against the Blackfeet if they're needed. I know it. Their messenger is likely to come any day, and it will be a bad thing for our cause if their friendliness is broken by this suspicion."

"Your cause?"

"No, I haven't got any," he retorted. "I'm not talking for myself—I'm out of it; but I mean the cause of lives here in the valley—the lives on both sides—that would be lost in a useless fight. It's all useless."

"And you acknowledge, then, that you don't consider the cause of the whites as your own cause?" asked the captain quietly.

"Yes!" he burst out emphatically, "I'll own up to you or anyone else; so make me a horse thief on that, if you can! I'd work for the reds quicker than for you, if there was anything to be gained by fighting for them; but there isn't. They'd only kill, and be killed off in the end. If I've worked on your side, it's been to save lives, not to take them; and if I've got any sympathies in the matter, it's with the reds. They've been dogged to death by your cursed 'cause.' Now you've got my ideas in a nutshell."

"Yes," agreed the captain sarcastically, "very plainly expressed. To establish entirely your sympathy with your red friends, it only remains for you to be equally frank and report your movements of last night."

"Go to thunder and find out;" and with this climax of insubordination, the scout left the presence of the commanding officer and marched back to his shack, where he took possession of the bunk and was sound asleep in five minutes, and altogether undisturbed by the fact that a guard was stationed at the door of the impromptu prison with orders to shoot him if an attempt to escape was made.

Captain Holt's leniency with the scout, who simply ignored military rule and obedience in a place where it was the only law, was, for him, phenomenal.

The one thing in Genesee's favor was his voluntary return to camp; and until he learned what scheme was back of that, the captain was obliged, with the thought of his superior officer in mind and the scout's importance, to grant him some amenities, ignore his insolence, and content himself with keeping him under guard.

The guard outside was not nearly so strong in its control of Genesee as the bonds of sleep that held him through the morning and well-nigh high noon. He had quickly summed up the case after his interview with Holt, and decided that in two days, at most, the Major would be back, and that the present commander would defer any decided movement toward the Kootenais until then. As for the horses, that was a bad business; but if they chose to put him under arrest, they plainly took from him the responsibility of hunting for stock. So he decided, and in the freedom from any further care, dropped asleep. Once a guard came in with some breakfast, which he ate drowsily, and turned again to his pillow.

"When that fool, the commanding officer, concludes to let up on this arrest, there's likely to be some work to do—I'll fortify myself while I have the chance;" and that determination, added to his exhaustion, served to make his rest a very deliberate affair, not to be disturbed by trifles.

Several things occurred during that winter's morning that were far from trifling; yet no sound of them came to him, not even when a shot on the ridge echoed across the valley, and ten minutes later was followed by several more, accompanied by yells, heard faintly, but clearly enough to tell that a skirmishing party was having a shooting match with someone across the hills. In three minutes every horse left in camp was mounted and scurrying fast as their feet could carry them through the drifts, while the horseless ones, whose stock had been run off in the muffled silence of the snow storm, remained unwillingly behind.

At the end of the avenue Lieutenant Murray caught sight of Stuart and Hardy, riding toward camp. There was a hallooed invitation to join, another of acceptance, and the civilians joined the irregular cavalcade and swept with them over the hill, where the sounds of shots were growing fainter—evidently a retreat and a chase—toward which they rode blindly.

Through all of it their chief of scouts slept unconcernedly; a solid ten hours of rest was taken possession of before he aroused himself to care whether it was daylight or darkness.

"Major come yet?" was the first query.

"No."

"Am I still under arrest?"

"Yes."

"Then bring me something to eat. Past chuck?"

On being informed that the midday meal had been ended two hours before, his next query was whether anyone from the ranch had been to camp; but the guard thought not—a reply most grateful to the prisoner.

(To be continued.)

I MET HIM ON THIS VERY SHIP!

It was within an hour of sailing time. I was on my way home from Europe five years ago. The Mauretania lay beside her Liverpool wharf. Everybody was hurrying to get on, as we were to sail at five o'clock. Suddenly, without warning—without a propeller turning—she commenced to pull away from her moorings. The gang planks creaked--broke loose--and there was quite a commotion as the mighty Mauretania tore loose from her moorings and floated out in the water. It was not a serious accident, but it was exciting. In the excitement I met a man leaning over the rail who looked at me and we laughed together. Then we just naturally got acquainted like people do when they are traveling. He was J. J. Berrigan, of Orange, N. J., the famous cream separator expert and inventor. I had never seen him before, but I had heard of him. I told him I was from Waterloo, Iowa, and he said, "You are Galloway." I soon found out that he was the great cream separator expert and a man I was very glad to meet. Naturally we became very well acquainted. He told me what he had done in perfecting cream separator patents and improvements. I told him he was just the man I was glad to get acquainted with. After the Mauretania had been lashed to her wharf again the excitement was over, and we pulled out of Liverpool several hours late--Berrigan and I began to talk cream separator, and every day after that we spent several hours together visiting. I told Mr. Berrigan that we were perfecting what I thought was the best cream separator ever produced, and I also told him if he would come to Waterloo and put on the finishing touches, go over the separator, test it, criticize it, find fault with it wherever he could and suggest any possible improvements, I would pay him well for his time. In a few days after we landed in New York he did come to Waterloo. He said our separator was one of the finest designs he had ever seen, and with the few recommendations which he made, he pronounced it O.K.--good as the best--and better than many of the separators on the market today. Our engineers, designers and separator builders had produced a machine with graceful lines, simplicity of construction, combined all the good features and left out all the faults. Mr. Berrigan commended us on the work and immediately put his stamp of approval upon this machine. That's why I say

We Perfected This Separator

before we offered it on the market. We put out in the hands of farmers and dairymen enough of these separators to know that they would stand up under any test, whether operated and used in the kitchen, the milk house, the creamery or elsewhere, used two or more times per day, every day, week after week, month after month. I JUST WANT YOU TO TRY IT. If you like it, buy it. If you don't, send it back. We pay freight both ways. If the new Galloway Sanitary Separator is as good as I say it is you can't afford to buy any other kind. If it is not as good as I say it is, I could not afford to make this ninety-day trial offer and I could not afford to guarantee it for ten years.

Buy Direct--Save Money

Try a Galloway Sanitary cream separator for ninety days. Stand it side by side with cheaper machines and you will see the difference in material and workmanship, design and skimming qualities. Stand it beside the highest priced machines, test them side by side for months. Higher priced machines will not run any easier or skim any closer, can't be more perfectly sanitary nor better built. I want

You to Read This Book

It tells the story of how we took four years to design and perfect this separator, to build into it every good cream separator feature and retain its beautiful proportions. How we did not build it down to a price, but built it up to a high standard in our own factories right here in Waterloo. It tells how we build Galloway Sanitary Separators from the ground up, how they are designed, and many other separator secrets and facts.

Note these few strong, simple, sanitary parts. Easy to wash clean--no rough edges--no sharp corners. Bowl catches any foreign matter in the milk. Only two shafts in the whole gearing--both of high-carbon steel, in long, perfectly fitted bearings. All gear shaft and both bowl spindle bearings supported by one casting--the gear case. All the working parts run spray of oil. Simple, effective driving clutch on crank shaft.

4 Good Sizes From 375 to 950 lbs. Capacity per Hr.

CHOCK FULL of DAIRY WISDOM

A meaty, exact concise, truthful book about cream separators, engines, tractors, spreaders and other mdse. Why by selling direct I can make a machine as good or better than many high-priced separators sold through other systems. That's why I want you to get this book. It tells the whole story. It tells the truth. It tells the facts. Ask for it today. A postal gets it. Mention separators in writing.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

Ailing Animals.

Worms.

Please tell me the best remedy for worms in a horse.

A very good agent to remove round worms from a horse is the following: Give twice daily for three or four days a drench composed of turpentine or creolin, one ounce in three or four ounces of linseed oil, this to be followed on the fourth day by a physic of Barbados aloes, one ounce. Let the horse stand twenty-four hours after giving the aloes.

My horses have worms about three inches long and black. I have been feeding them tobacco, wood ashes and some medicine I bought but they don't seem to get rid of them. The horses are from four to seven years old. I have been feeding shelled corn, oats and good timothy hay.

Give each horse oil of turpentine, four ounces, and oleoresin of aspidium, one ounce, in a pint of linseed oil. After the effects of this have passed off give your horses the following: Dried iron sulphate, three ounces; powdered gentian, three ounces; powdered nux vomica, two ounces; soda bicarbonate, six ounces. Mix and give heaping tablespoonful in ground feed three times daily.

Ringworm in Calves.

Will you please tell me what to do for my calves? They get scabby around the eyes and nose and lose their hair and then it will spread in spots here and there all over the body and forms a hard crust wherever these spots are. They do not seem to be sick, but they do not grow or thrive one bit. I have tried dipping, but it was not successful as it is too cold. I have twenty-eight head and am afraid I will lose some of them, as they can hardly stand up now.

First soak the crusts in oil and several hours later remove the crusts with pure soap and water. Be sure to remove all the soap with warm water. Now paint diseased parts with tincture of iodine or rub in an ointment of one part of iodine crystals and eight parts of goose grease once daily. Salicylic acid, one part, and alcohol, ten parts, is also good. Burn the scabs you remove.

After Effects of Castration.

I have a dark gray colt coming three years old that was castrated as a yearling. One of the incisions closed up. I opened it and he apparently held up all right, but since that time he has never done any good. When I took him from pasture last fall he was very thin and had small scabs scattered over his body. I gave him the best of care all winter and he was in fair flesh when turned in pasture this spring but had no life. This fall he is simply a skeleton, with hind legs swollen to twice their natural size from hocks to ankles, sheath also swollen. His appetite is good and he drinks lots of water. Have given no medicine.

This trouble may be a sequella of castration and again it may not. Try giving this animal a tablespoonful of Fowler's solution of arsenic once daily. This should be given in a half-pint or more of water. If he does not improve in three or four weeks you had better have a veterinarian examine him.

Don't Let Disease Get YOUR Live Stock

At this season, your feed lot is the breeding place for disease. Here many GERMS and the larvæ of WORMS are taken into your animals' stomachs, where they thrive and multiply rapidly. You can't tell when disease is going to "clean you out" entirely.

WORMS cause more diseases and ACTUAL LOSS among live stock than any other single thing. It is but a short step from worms to indigestion, scours, disease and death. It is far better to be safe than sorry — also cheaper. Keep your animals free from these blood-sucking, disease-breeding, feed-consuming pests and you can practically laugh at stock ailments. Thousands do it—so can you with

The Great Worm Destroyer **SAL-VET** **The Great Live Stock Conditioner**

The Great Worm — REG. U.S. PAT. OFF. — The Great Live Stock

SAL-VET is the wonderful medicated salt that hundreds of thousands of farmers have fed and endorsed. It frees your live stock from worms and puts the animals in condition to get the good out of your high priced feed. It makes them sleek of coat, vigorous in action; helps them thrive better and grow into weight and profit faster. SAL-VET costs only 2½c a month for a hog or sheep and only 10c a month for a horse, mule or head of cattle, making it THE CHEAPEST STOCK REMEDY YOU CAN BUY.

Sal-Vet SAVES Thousands Write Like This:

"We have used SAL-VET as preventive of worms in our flock of sheep, and have great faith in it. We keep it before them all the time. The sheep like it and they are free from worms although we have run sheep in our pasture quite thickly for the past fifteen years."
HENRY L. WARDWELL,
Pres. American Shropshire Ass'n,
Springfield Centre, N. Y.

"Last winter I was unable to get my horses to put on a pound of weight. Their hair was rough and coarse and the animals all run down. After using SAL-VET one of the horses passed at least two hatfuls of worms, and since has been improving steadily, so that now he is sleek and fat. I have spent a good many dollars for different kinds of condition powders, but have not received the results I have from forty pounds of SAL-VET."
WILLIAM A. BERNEL,
Barnfield, Ohio.

"My hogs certainly did fine while fattening, and I did not lose a single one, while some of my neighbors lost their entire herds. I must, and do give SAL-VET credit for these results." J. WALES MUNROE,
R. 6, Plainfield, Ill.

PRICES

10 lb. pkg	$ .75
20 lb. pkg	1.25

Mr. Ten Eyck Heads New Farm Service Bureau.

The Emerson-Brantingham Company, of Rockford, Illinois, one of the oldest implement companies in this country, has established a new department which indicates the progressive spirit of this firm. Mr. A. M. Ten Eyck, well known for his splendid work with the experiment stations at Fargo, N. D.; Manhattan, Kan.; Fort Hays, Kan., and Iowa State College, Ames, Iowa, has been engaged to direct the agricultural service bureau of the Emerson-Brantingham Company. He is a native Wisconsin product, having been born and raised on a farm near Brodhead, Green county. He received his degree of B. Agr., at the Wisconsin College of Agriculture, and the degree of M. S. at the Colorado Agricultural College. Recently Mr. Ten Eyck has been county agricultural agent of Winnebago county, Illinois. In addition to his practical experimental work, Mr. Ten Eyck has done considerable writing of note on agricultural topics, both for the experiment station bulletins and for the agricultural press. He is also a public speaker of ability and he will make a splendid leader in this new department of the Emerson-Brantingham service. Mr. Ten Eyck will be available for public addresses on agricultural subjects and will make short talks to students on such subjects as the plow, harrow, tillage, cultivation, machinery, rollers, packers, farm tractors, roots of plants, grasses, limestone and the various divisions of soils and crops. He will visit the various experiment stations, prepare articles for the agricultural press, answer inquiries on agricultural topics and make himself generally useful to Emerson-Brantingham patrons. The Emerson-Brantingham Company invites all who may be interested to avail themselves of the service of their new department.

Every seventh family in the United States owns an automobile, according to the National Automobile Chamber of Commerce. Iowa has one car for every fifteen of population, a better ratio than any other state.

Gathered by Representatives of The Wisconsin Farmer.

Holstein Breeders, Stop! Look! Listen!

IF YOU are interested in Holstein cattle you will be interested in the dispersion of the herd of Harry D. Dunbar, Elkhorn, Wisconsin. You have read of the winnings of this herd at the Wisconsin State Fair and many know something of the records made in the herd. We have been acquainted with this herd for the past three years and we can assure you that you will be well repaid if you attend the sale. There will be some forty head in the sale ranging from small calves to mature animals. However, it is a herd of young animals, as there are only eight over four years old. All of the younger and most of the older ones are from A. R. O. dams, ranging from 15.42 pounds as two year olds to 28.70 pounds. Ten of the cows going into the sale have A. R. O. records. Six have semi-official records from 542.44 to 936.62 pounds. Nearly every animal in the herd was raised by Mr. Dunbar. The herd sire, Beauty Walker Pietertje King, will be sold. His sire is King Colantha Clothilde, that has twenty-four A. R. O. daughters, sixteen with records ranging from 20 to 30.51 pounds of butter in seven days. His dam is Beauty Walker Pietertje, that made 19.90 pounds of butter in seven days, as a three year old. Her dam and both grandams are all 30-pound cows. There are nineteen daughters of Beauty Walker Pietertje King in the herd, which offers an especially good opportunity to get a sire and a number of his daughters. Sixteen of the cows in the sale are bred to the 30.51-pound bull, Colantha Hamilton Pietertje. This is one of the best bred bulls in the state. His dam, Colantha Hamilton, made 30.51 pounds of butter and 587.2 milk in seven days, at three years three months of age and is a daughter of Beauty Betsy Hamilton, 32.39 pounds butter in seven days. Among the cows to be sold are Knight Errant Queen with a seven-day record of 28.70 pounds and 936.62 pounds in 365 days. This cow is a daughter of Knight Errant, whose other daughters to be tested have made good records. One of these, Happy Home Vera Ormsby, made 30 pounds of butter in seven days. Among the other cows in the herd are those that have higher butter records. Four of the heifers are daughters of Knight Errant Queen, whose yearly record is 936.62 pounds butter and 28.705 in seven days. Average yearly test 3.94 per cent. The sale will be held on the farm, which is two miles southeast of town. Transportation will be furnished to the farm from Elkhorn. The sale will start at twelve o'clock. R. E. Haeger, Algonquin, Ill., and Jack White, Elkhorn, will cry the sale. H. S. Hoard will represent The Wisconsin Farmer. Catalogs will soon be ready for mailing. Send for one at once and get your name on the list. When writing for catalog kindly mention that you saw this advertisement in The Wisconsin Farmer. See page 23.—Adv.

Lefebure's Belgians.

H. LEFEBURE & SONS, Fairfax, Ia., write as follows, under recent date: "Our Belgian stallions, mares and colts have become accustomed to and are now enjoying their winter quarters. We have nine barns full of select individuals of this breed. Two large barns are filled with stallions, both American bred and imported, with size, quality, weight and colors demanded by the American horseman. Two other barns accommodate our young American Belgians, consisting largely of big, heavy-boned, growthy yearlings. We have another barn full of foals, while there are four large spacious barns devoted entirely to imported and American Belgian brood mares. We are in better shape than ever before to supply customers with anything they may want in the line of a good Belgian of any age, color or sex. We greatly enjoy meeting visitors at Fairfax or at the hourly Cedar Rapids and Iowa City interurban cars and bringing them out to look over our stock. Visitors can easily spend an entire day examining the animals in our different barns." See page 24 and when writing kindly mention this paper.—Adv.

McDonald Sale Off.

WE have just been advised that J. D. McDonald, of North Bend, Wis., has called off his Poland China sale that was to be held at West Salem, February 8th. Mr. McDonald has had such a demand for bred gilts that he feels certain that he can dispose of those that he wishes to sell at private treaty and, inasmuch as he would have to haul his sows about twenty miles in order to sell at West Salem, he thinks it best to call the sale off for this year. In view of this fact, the yearlings and gilts that had been reserved for the sale will now be offered at private treaty. McDonald has the goods and the best ones are bred to the 1,000-pound Mac's Chief. If you order from McDonald you get big Polands with quality and bred to a grand champion boar. Write him at once, for he has one of the best herds in the Northwest, and, as you know the good ones are always in demand. Please mention The Wisconsin Farmer when writing.—Adv.

Joe Hendricks and His Big Polands.

IF there ever was a natural hog man, J. C. Hendricks, Hazel Green, Wis., is one of them. One can travel many miles before he will find a better herd of big-type Polands than those owned by Joe Hendricks. He holds the bred sow sale record for the state and from the looks of his sale offering now, those to be sold on February 15th are equally as good as the ones that made the high average last winter. The gilts will weigh right at 400 pounds by sale day and fifteen noted Poland China sires will be represented in the offering. At the proper time we will have more to say about this sale bunch, but in the meantime, don't think that you have to go to Iowa to get good Polands. See page 25.—Adv.

Atwater's Banner Offering.

WHEN L. F. Atwater, Bangor, Wis., makes the announcement that he will sell bred Duroc Jerseys on Wednesday, January 31st, those interested know that they will receive a treat on that day. It has not been the writer's pleasure to see Mr. Atwater's previous offerings of Duroc Jersey sows, but those that have seen the former consignments say that this will be his banner offering. We will say, however, with all due respects to the other good breeders that he will drive the best lot of Duroc Jersey gilts into the sale ring on January 31st, that we ever saw go through an auction sale. That is a broad statement, but he has the goods. Mr. Atwater is a progressive breeder. He realizes that a breeder must go forward or backwards, one cannot stand still and he certainly has gone forward since he has been in the Duroc business. At any sales where he makes purchases he always buys the best that is sold. The same condition exists when he buys his herd boars, consequently at the present time he has one of the best herds of this breed to be found in the entire country. Wisconsin does not appreciate the Atwater Durocs as it should. If this breeder was in Iowa or Minnesota, where good Durocs are appreciated he would be a head liner in every respect. Forty-five head have been cataloged for this sale. The attraction will be the two-year-old sow, Defender Queen. This sow was grand champion at Minnesota, Wisconsin and at the Interstate Fair at La Crosse, and was third at Omaha. We feel certain in saying that she is the best sow that will be sold in the Northwest this winter, and anyone wanting an aged sow to show next fall will make no mistake in buying her. She is safe in pig for a February litter to the service of Proud Chief Jr., the junior champion boar at Hamline and Milwaukee. If you want sows to show in the senior yearling class next fall you can find them in this sale. Of the spring gilts, there are about six that are real show prospects. Just now we want you to get one of the catalogs and make arrangements to attend this great sale of Duroc Jerseys. Buying instructions should be sent to T. P. Shreve in care of Mr. Atwater. Write at once for a catalog and mention The Wisconsin Farmer. Dennis Shea will sell a great lot of sows at Melvina, near Bangor, the day before and you should attend both sales. Watch the issue of January 18th for further announcement. See page 23.—Adv.

Geo. Willsie's Sale Offering.

WHEN Friday, February 2d, rolls around, Geo. H. Willsie, will drive a bunch of sows into the sale ring on his farm, near Prosper, Minn., that will be pleasing to the eye. We saw this sale offering a short time ago and he is selling thirty-five spring gilts that no breeder need be ashamed of. The important part is that these good gilts are sired by Big Col., in our estimation, one of the three or four best boars that ever did service in the stae of Minnesota. We have often said that we consider Big Col., the second best King the Col. boar we ever saw. The gilts sired by Big Col. are out of Chief Defender dams which makes a very desirable cross. Other gilts are sired by Chief Defender. The last mentioned boar is a litter mate to old Disturber, being by Defender, out of Lucy Wonder 112th. The good yearlings and gilts sired by the above boars have been bred to a son of Burke's Good Enough, out of a King the Col. dam. Willsie has named him Burk. Others are bred to Top Col. King, a son of American Top Col., out of a King of Cols. dam. This is certainly a Colonel bred herd and no one will deny the fact that this is as good a line of breeding as a person can get into. We won't mention the many good individuals that will go to make up this sale. Just mark the date down and arrange matters so that you can attend the sale. If you can't do this, get the catalog, look over the pedigrees and send your buying instructions to T. P. Shreve who will represent The Wisconsin Farmer at this sale. Notice the advertisement that appears on page 25 and write at once for one of the catalogs and please mention this publication.—Adv.

GRIMES BROS. & KRUEGER'S SALE OF DUROCS

WEST UNION, IOWA

MONDAY, JANUARY 29, '17

40 HEAD---GILTS, YEARLINGS, TRIED SOWS---POPULAR BLOOD LINES

W. G. KRUEGER
HAWKEYE, IOWA

GRIMES BROS.
WEST UNION, IOWA

SALE AT WEST UNION, IA.

Dennis Shea's Duroc Offering.

ONE of the Duroc Jersey breeders of Wisconsin that has come to the front rapidly is Dennis Shea, of Melvina. He was fortunate in making his original brood sow selections; has taken good care of them and he now has a good herd of "red hogs." His foundation sows were daughters of Marion's Wonder. They have the size, consistent with that line of breeding, and they have been bred to big-type boars. Three years ago Mr. Shea bought a fall pig of O. S. Larson sired by King the Col. This boar he named Col.'s Choice and he is a typical King the Col. boar, deep and thick, a good back, heavy boned and a worthy sire. His dam, Miss Choice Goods was by H. A.'s Choice Goods, a half brother to the noted H. A.'s Quality. When you see this boar he will appeal to you. Some of the best gilts in the sale are bred by him. Wonder's Chief, a son of that great sire, Cherry Chief, did some good work in this herd, but Mr. Shea sold him before he realized what a good sire he was. When you see his get, you'll want a gilt or two. Pal's Defender by the champion, Lee's Defender, is a boar with great scale, a rainbow back, deep sides and plenty of bone. A few of the gilts are by him, but there are more bred to him than sired by him. No doubt the greatest demand will be for the gilts bred to the Pathfinder boar, namely, Pathfinder 2d, and about two-thirds of the offering has been bred to him. This boar is of spring farrow, has worlds of quality, an ideal head and ear, plenty of bone, and in another year, we believe he will make quite a boar. Mr. Shea has used him heavily, as you can see by the catalog, and for that reason do not expect to see him in show condition sale day. Thirty-five head will be sold, thirty spring gilts and five fall yearlings. It will pay you to attend this sale. It comes the day ahead of L. F. Atwater and the two farms are not far apart. You can make the two sales as easily as one. If you can't attend send instructions to T. P. Shreve. Write at once for the catalog and mention The Wisconsin. See page 24.—Adv.

GILTS OFFERED FOR SALE BY E. H. PARKER & SON, JANESVILLE, WIS. SEE ADVERTISEMENT ON PAGE 25 OF THIS ISSUE.

TOO LATE TO CLASSIFY.

RED Polled bulls. Eight choice bulls from calves to yearlings, all sired by a first prize International bull, Liza Lad 23108. His dam has A. R. record, av. 515 lbs. fat. Price $75 to $150. Also a few females. Byron R. Curran, Taylor, Wis.

Folding Sawing Machine Saves Labor.

IT IS no longer necessary to use the old-fashioned cross-cut saw with a man at each end for the winter sawing on the farm. The folding sawing machine, manufactured by the Folding Sawing Machine Co., 161 W. Harrison St., Chicago, Ill., is easily operated by one man, and does excellent work, permitting sawing close to the ground. The machine is light and easy to carry about. It is inexpensive. Readers of this paper may obtain literature explaining the folding saw and giving testimonials of farmers who have used it, by writing to the company, mentioning that you saw the advertisement in this paper.—Adv.

Cook-Scheibe-Vaughn Chester Sale.

WE will say it's "some offering" of Chester White swine that the boys at Burlington are going to put up in their sale on Monday, February 5th. Cook Brothers, W. C. Scheibe and W. W. Vaughn & Son are offering the tops of their three herds. If you saw their herds at the state fair you know what kind of gilts you will see at the sale and we might add that these gilts have been kept coming right along ever since the fair. Watch next week's issue for the announcement advertisement.—Adv.

Big Mint.

THIS is the name of the spring boar now doing service in the C. S. Flesch Poland China herd at Mt. Ida, Wis., and you breeders that are going to show next fall will have to consider this boar. He is as big as they make them, yet he has the desired quality. He is sired by Jumbo Again by Big Jumbo 2d, which gives him a line of breeding most popular. He sells gilts in the Madison sale that will be attractions. This herd will also be represented in the Grant county sale with about fourteen head, mostly by his

THE ATTRACTION.—**Defender Queen**—An 800 pound 2-year-old sow. Grand Champion at Minnesota and Wisconsin State Fairs and third at Omaha. Bred for a February litter to **Proud Chief Jr.**, the Junior Champion at the above state fairs. One of the greatest sows to be sold this winter. The fall yearlings are by **Lee's Defender**, among which are several show prospects. Bred early. The 35 spring gilts are as good as ever entered a sale ring. Some will weigh right at 400 lbs. Sired by Model King, Great Chief (by Cherry Chief), Lee's Defender and out of daughters of **King The Col., Col. Gano, Marion's Wonder, Sensation's Wonder**, etc. **REMEMBER**—It pays to raise the best—buy where you get that kind. **I WANT YOU TO SPEND THE DAY WITH ME.** Send all mail bids to T. P. Shreve in my care, I'll guarantee his selection. Write at once for my catalog, and mention The Wisconsin Farmer. Col. I. E. Stickelman, auctioneer.

good boar, Jumbo's Equal 2d. See page 25.—Adv.

A Sale Worthy of Your Attention.

ON MONDAY, January 29th, there will be a sale of Duroc Jersey bred sows at West Union, Iowa, that should appeal to the breeders of the better sorts. W. G. Krueger, of Hawkeye, Iowa, and Grimes Bros., of West Union, Iowa, have combined forces and will sell forty head of gilts, yearlings and tried sows on the above date in the latter town. We have recently seen this offering and it is one that we do not hesitate to recommend. The tried sows are the big kind that have raised good pigs, the yearlings are well grown and of the most popular breeding and in gilts they are selling some as good as we have seen this year. By picking twenty from each of two herds it is only natural that one would expect to find a high-class offering, and you will not be disappointed. At this time we will mention the boars that are used in these herds and next week we will tell you something of the good sows that will be sold. Critic's Model is a son of Critic's Perfection, a junior yearling boar that was second at the Omaha swine show—the very best of breeding. Sunkist Model is an aged boar sired by the great Golden Model 2d. Gano Wonder is of the real big type, being a son of the noted Col. Gano. Invincible Pride is one of the best sons of the 1,000-pound Chief Invincible that we have seen. The offering has been bred to these boars and practically the entire lot has been bred for early March farrow. Notice the advertisement that appears on page 22 of this issue and you can, in a measure, appreciate this offering, for you will see that the breeding is the very best and individually the offering is consistent with the breeding. Write at once to either of the above breeders for their catalog, mentioning The Wisconsin Farmer. If you can't attend, send bids to T. P. Shreve. Remember the date and place.—Adv.

DISPERSION SALE OF
OAK LODGE HERD OF A. R. O.

HOLSTEIN-FRIESIANS

ELKHORN, WIS., JAN. 30, 1917

38 Cows and Heifers, 10 Bulls

INCLUDED in the lot are six cows and heifers with yearly semi-official records from 542.44 to 936.64 pounds of butter and thirteen of their sons and daughters. Four daughters of the cow with the 936.64-pound record. Almost every animal has an A. R. O. record or is from an A. R. O. dam. Herd is headed by Beauty Walker Pietertje King, whose seven nearest dams average 28.72 pounds of butter in seven days. On his daughters we are using Colantha Hamilton Pietertje, a son of Colantha Hamilton, that made 30.51 pounds of butter from 587.2 pounds of milk in seven days as a junior three year old. She is out of Betsey Hamilton Beauty 32.39. Auctioneers, R. E. Haeger and Jack White. Catalogs ready Jan. 15th. Address

HARRY D. DUNBAR **ELKHORN, WIS.**

Services of Expert Live Stock Photographer

Up-to-date live stock breeders are more and more using photographs in advertising their herds. It is the modern way of doing things, and The Wisconsin Farmer is meeting the situation by offering the services of a skilled live stock photographer. Appointments may be made by mail at any time. For estimates of cost and other information write The Wisconsin Farmer.

HORSES.

PROPRIETORS OF THE WHITE CITY STOCK FARM.

WE have never offered to our trade a more superior lot of Percheron and Belgian stallions, in both imported and American bred stock, than we can now show. Our imported horses are young and thoroughly acclimated, many of them having made seasons in 1915 and 1916 and are tried and tested sires. Our American bred horses were selected from the best breeders in America and are out of noted sires and dams and are horses of great quality in every respect. We have especially selected ten black and dark gray 2 and 3 year old Percheron stallions weighing 10 tons. These are all outstanding horses and should be purchased by those who need a sire for full-blooded mares. Among them is Coco, 1st prize 2 year old and reserve champion at the Wis. State Fair. This colt is black in color and weighs a ton. To the early buyer we offer one of the greatest collections of ton stallions to be seen in any importing barn this winter. We have no old, worn out, picked over stallions on hand. Let us know your wants, or better still, come and spend a day or two. A hearty welcome awaits you. Send 25 cents in stamps for large horse hanger, which shows the picture of a number of stallions now on hand, our main farm and sales stable and our firm's picture. Will sell several of our choice Iowa farms on easy terms.

HOLSTEIN-FRIESIAN CATTLE.

The Bull Is Half the Herd!

King Segis Johanna, whose two nearest dams average over 39 pounds.

VISIT the Pabst Stock Farm and look over our splendid lot of youngsters from one to ten months old. Our sires are strong in Pontiac Korndyke breeding, backed by high records. All our cows have A. R. O. records nearly all from 20 to over 33 pounds. Our 38 yearly records average 16,619 pounds milk and 709.3 butter, made by 8 junior two year olds, 5 senior two year olds, 7 three year olds, 6 four year olds and 12 mature cows.

A 31.02 POUND BULL FOR SALE

RACINE JOHANNA PIEBE MERCEDES 188460. Born December 8, 1915. Well marked, of excellent conformation and well grown. His dam, **Ella Mercedes of Elm Court,** made **31.02 pounds butter** in seven days; **130.47** in thirty days and **829.78** in a year. She is a big cow weighing over 1,600 pounds; her dam weighs over 1,700. His sire, **Racine Sir Johanna Piebe,** is a show bull. His dam is a show cow and weighs close to 1,600 pounds. In seven days she made 24.49 and 808.82 pounds butter in a year. Send for his complete pedigree and picture. **Large size, good, straight type** and **heavy production ability** have been bred into this bull for generations. Come to our farm and see his dam, grandam and sisters. They are the type you will want in your calves. Am also offering a straight, well-grown heifer, born May 15, 1916, out of Lady Johanna of Elm Court, a half sister to Colantha Piebe of Elm Court; calf is sired by Count of the Pontiacs.

Reuben Klofanda R. 1, Racine, Wis.

HEAD YOUR HERD WITH A WINNER

GET INDIVIDUALITY WITH BREEDING. Would you like to head your herd with a brother to the junior champion Holstein bull at the Minnesota State Fair, 1916, or the junior champion bull at the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of that blood that won for us the Premier Breedership at the Southwestern Dairy Show and the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of the blood that enabled us to win the Wisconsin Farm Management Contest, 1915? DO YOU want to breed individuality and production into your herd? If so, NOW is your chance. We offer some 20 choice young bulls from 1 to 15 months old bred in these lines. They are sired by our senior herd sire, Bairdland Segis Sir Prize, and out of daughters of Sir Urmagel Burke, a 31-lb. bull, with a 35-lb. sister. These daughters are making from 18 to 25 lbs. as 3 and 4 year olds. WHAT would one of these youngsters be worth to you? Write us your wants or come and see them. Herd tuberculin tested. Each animal guaranteed to be a breeder.
BAIRD BROS. - - - - **WAUKESHA, WISCONSIN**

HOLSTEIN BULLS Ready For Service

BACKED by large 7-day and yearly records. King Segis Concordia Rigtje, born Dec. 13, 1915. Sire, King Segis Concordia Hengerveld, 3 junior 2-year-old daughters above 15 lbs., one 18.391 lbs. He is 32-lb. son of King Segis De Kol Korndyke, sire of the first 40-lb. heifer. 1st dam, junior 2-year-old, 17.29 lbs. 7 days, 16,313.0 lbs. milk, 704.087 lbs. butter 1 year. 2d dam, junior 3-year-old, 14,083.0 lbs. milk, 550.6 lbs. butter. 3d dam, 23,485.0 lbs. milk. 918.76 lbs. butter. HOLSTEIN BULL FOR SALE

THE bull advertised last week has been sold and we now offer a grand individual, straight top line, square, broad rump, smooth over shoulders, well sprung ribs, good head and lots of style. Dropped July 1, 1915. Sired by Prince Johanna Belle, that came from the same herd that produced Johanna De Kol Van Beers, Cedarlawn Johanna and other noted animals. His dam is a half sister to a former world's record two year old, both being sired by Gem Pietertje Hengerveld Paul De Kol, 13 A. R. O. daughters. We are pricing this youngster at $90.00.
EDGEWOOD FARMS, Inc. **PEWAUKEE, WISCONSIN**

A PROVEN HOLSTEIN BULL FOR SALE

IN order to avoid inbreeding we offer for sale our great herd sire, King Artis Pontiac, born Jan. 25, 1911. His daughters have made records up to 20 pounds butter in 7 days at 2 years of age. His two nearest dams averaged over 29 lbs. butter in 7 days and his sire's dam has a record of 31.7 lbs. butter in 7 days and 21,834 lbs. of milk and 1,076 lbs. butter in one year. Write for pedigree and photo.
Wisconsin Star Stock Farms **Ed M. Schultz, Hartford, Wis.**

DODGE AND JEFFERSON COUNTIES

THE two greatest Holstein counties in Wisconsin. Holsteins from these two counties have made Wisconsin famous. You can buy the same kind of blood now. Our breeders can now supply you with both males and females of all ages. Write Francis Darcey, Watertown, Wisconsin, Secretary, Inter-County Holstein Breeders' Association.

Purebred Registered

HOLSTEIN CATTLE

During the fiscal year ending April 30, 1916, there were reported to the Advanced Registry Office of the Holstein-Friesian Association, 11,868 short time official records, over one-half of which were by heifers with first or second calves. The average seven-day production of these 11,868 animals was 401.1 lbs. of milk, containing 3.53 per cent of butterfat. These figures emphasize the fact that Holstein merit is based, not on individual records, but upon the wonderful uniformity of high productiveness of the purebred Holstein cow. There is big money in the big "Black and White" Holsteins.

Send for FREE Illustrated Descriptive Booklet.

The Holstein-Friesian Association of America
F. HOUGHTON, Sec'y, Box 143, Brattleboro, Vt.

REGISTERED JERSEY
COWS AND HEIFERS

WITH **register of merit records** or breeding. Both imported and American bred. **2 yearling bulls ready for service** from dams having records over 500 pounds butter in a year. Send for pedigrees. **Prices reasonable.**
Ed. Bruins - - Fairwater, Wisconsin

JERSEYS

100 FEMALES in my herd, imported and American bred. Young bulls for sale from Advanced Registry dams. I can please you. Write
FRED STUBLEY BLACK EARTH, WIS

ELMDALE FARM . . .

JERSEYS

REGISTERED bulls ranging in age from 9 to 15 months, sired by Inez Rosarie's Oxford, from heavy producing cows of choice type and breeding. Send for pedigrees, description and price.
H. Holt & Son Oconomowoc, Wis.

HEREFORD CATTLE.

HEREFORDS

BULLS FOR SALE

OF serviceable age. Pasture raise and not pampered. Well bred individuals. A few good calves. Come and see them before you buy.
J. J. F. WINTERS SPARTA, WIS.

SHORT-HORN CATTLE.

SHORT-HORN COWS AND HEIFERS

Fresh or to freshen soon. Priced very reasonable. Write to
WILLIAMS BROS. BANGOR, WISCONSIN

100 Short-horns to Select From-100

BULLS and females. One or a carload. Write now.
BREEDERS' ASSN., J. E. Kennedy, Secy. - - ROCK COUNTY SHORT-HORN JANESVILLE, WIS.

PURE SCOTCH SHORT-HORN BULL

SULTAN GOODS. White, January, 1915, tuberculin tested, right, bred by Anoka Farms. Sire, Royal Silver (sold for $4,000). Combines the blood of Choice Goods, Sultan, Premier, The Lad For Me and Princess Alice. Dam, Missie Sultana 2d, a Marr Missie. Few such bulls for sale—your opportunity. Address
F. S. BUNKER, KILBOURN, WISCONSIN

SHORT-HORNS POLANDS OXFORDS

CAN supply your wants in the above breeds. Write or come.
P. N. Collins River Falls, Wis.
(35 miles S. E. St. Paul)

MILKING SHORT-HORNS

HAVING several choice young bulls from dams giving 10 to 12,000 pounds of milk. I have a well-bred herd and keep records of production. Inspection invited. Address
Harvey H. Little Evansville, Wisconsin

Bates Milking Short-horns

2 YEARLING bulls ready for service from heavy-milking dams and backed by generations of **heavy-milking—high-testing cows.** They combine **Clay Buttercup** and **Wildeyes** breeding, the two best Bates families. Prices reasonable.
Geo. Wenham & Sons, Ft. Atkinson, Wis.

FOXHALL STOCK FARM

OUR offering in Scotch Short-horns this year is probably the best we have had to offer our patrons in years. We have several young bulls of serviceable age, high in quality and rich in breeding, and these are priced to sell. Could also spare a few females.
Fox & Gallagher Oregon, Wisconsin

SHORT-HORNS The get of Rosebud Champion, winning 2d at the International; Highland Sultan, winning 3d; Buchan Marshall, he from winners on both sides at same show. Can show you ton cows and 2,400-lb. sires. If you want size and milk come or write W. J. Bernd, New Richmond, Wisconsin.

MILKING SHORT-HORN BULLS

TWO REDS, eight to nine months old, sired by Milkman, that is out of a 4.4% butter fat cow that gave over 60 lbs. of milk per day. Send for prices and description. Address
Geo. Smith & Son - Burnett, Wisconsin

Bates SHORT-HORNS

OFFERING choice bulls old enough for service sired by 17th Duke of Wapsie. Herd established 40 years. Correspondence invited.
B. W. Little Janesville, Wis.

Good Short-horns

FOR SALE. 20 choice bulls and heifers. Prices reasonable. Standard Scotch breeding and of the right type and quality. Richard Maurer & Son, Fox Lake, Wisconsin.

GREEN VIEW STOCK FARM OFFERS

7 Pure-Bred SHORT-HORN BULLS

7 to 17 months old, and a few choice

POLAND CHINA BOARS

Farm joins the village. Address John H. Bear & Son, Spring Green, Wis.

SULTAN BRED SHORT-HORNS

WE can offer a few yearling, 2-year-old heifers and young cows and yearling bulls, mostly of Sultan breeding. They were sired by BROADHOOKS' PRINCE, VICTOR FASHION and ROYAL CORONET'S BEST. Their dams represent the best imported and American strains. Prices right. We have been breeding for over 25 years. Address, mentioning Wisconsin Farmer,
H. B. Drake & Son, Beaver Dam, Wisconsin

RIVERDALE STOCK FARM SHORT-HORNS

HAVE a few young cows with first calf; also a few mature cows, for sale. Three choice young bulls ready for service, reds and roan color, sired by Orange Clipper. Bull and heifer calves, born in October, sired by Clipper Sultan, a grandson of Whitehall Sultan. Prices reasonable. Address
H. Wehmhoff Burlington, Wis.

THE GREAT WORLD'S FAIR HERDS

40 Short-horn bulls and heifers sired by Village Mystic. 100 big-boned Poland China boars and sows sired by Big Bone and Long Wonder. Call at Prairie Lawn Stock Farm or write C. J. Schoenfeld & Son, Fox Lake, Wis.

SHORT-HORNS

SCOTCH and Scotch-topped. Herd headed by Collynie Sultan by Roan Sultan, out of Marchioness dam. If interested write

President, Wisconsin Short-horn Association

KITTY CLAY HERD HORNLESS SHORT-HORNS AND SHORT-HORNS

YOUNG bulls and heifers sired by Kitty Clay's Duke, that is out of the best family of milking Short-horns in existence. Also several Buff Wyandotte cockerels. Address
J. Warren Hoyt Rosendale, Wis.

BERKSHIRE SWINE.

CORTTE'S BERKSHIRES

FEBRUARY and March pigs of either sex for sale. These are sired by Pabst Rivaleer 3d—King of Rivals, well grown. Good prospects for next fall show rings. Reasonable prices on singles, pairs or trios. Address
A. P. CORTTE LOMIRA, WISCONSIN

Evergreen Windbreaks on the Farm

THE REASONS FOR SUCCESS OR FAILURE

By Earl Ferris, Hampton, Iowa—Leading Evergreen Specialist

The value of a good Evergreen Windbreak to the farmer in those sections of the country where hard winters prevail is generally recognized. It has been established through the experiences of thousands of farm owners for more than half a century and can easily be figured on an actual, yearly dollars-and-cents basis.

An adequate Windbreak row is a money-maker on two counts—first, for the saving in feed that its protection makes possible for the stock fed back of it; second, for the increased sales value it gives the farm.

The best authorities—farmers and stockmen who **know** from their own experience—state that an average good Windbreak saves the owner $2.50 to $3.00 for every head of stock fed in its shelter each season. They further estimate that a good Windbreak row adds from

$500.00 to $2,000.00 to the value of an average farm on the market.

Any Farmer Can Have a Good Windbreak

It is possible for any landowner, in any section of this country where a Windbreak is an advantage, to have one. **That is a fact** in spite of the many failures which have been experienced in attempts to grow Evergreens by farmers and stockmen. These failures have been found invariably to be due to causes that can be remedied—not to natural, unchangeable conditions.

There are four big factors which contribute to the success or failure of any attempt to develop an Evergreen Windbreak. Three of them constitute problems for the Nurseryman to solve—the fourth depends upon the man who buys the trees. Any one of them alone may cause a total failure and loss of time and money to the landowner. Here they are:

1st—The selection of the proper varieties of Evergreens for the section where they are to be planted.

2d—The hardiness, vigor and vitality of the trees, and the condition of their root systems when they leave the Nursery.

3d—The condition in which the trees reach the buyer—that depending, of course, upon the way in which they are prepared for shipment and packed at the Nursery.

4th—The care and cultivation given the trees after they are set out in the purchaser's Windbreak row.

Given the **right variety** of Evergreens—strong, healthy trees with big fibrous root systems—prepared and packed so that they reach the buyer alive and in condition to grow—properly cared for **after set out**—no man need fear failure with Evergreens. They will grow and thrive.

Proper Selection is Important

Right selection of varieties is extremely important—mistakes on this point cause a big percentage of all failures. Not all Evergreens will grow equally well in the same section—some thrive where others will not grow at all. Selection should be made with regard to the natural habitat of the trees—if it is not so made the attempt to start a Windbreak is foredoomed to failure. The highest quality, strongest, best-rooted trees produced will not grow satisfactorily in localities not adapted to them. Be sure, when you buy trees, that you get a variety suited to your locality.

Big Root Development is Essential

The quality of the trees set out for the Windbreak is probably the biggest factor of all in getting a shelter belt started. Strong, vigorous, healthy trees, **with well-developed, fibrous root systems,** are an absolute essential to success.

This tree quality depends upon the way the young Evergreens have been cared for in the Nursery—modern, scientific methods and constant care there produce dependable trees.

Big, fibrous root systems—the most important part of an Evergreen—can be developed to nourish the tree and insure its rapid growth in the Windbreak row.

If you want to be sure of success with

a Windbreak, buy and set out root-pruned and transplanted trees. No other known process produces the kind of roots that you want on your trees. Evergreens left to themselves grow only tap roots which must be cut when the trees are taken up. Cutting weakens the tree and, if there are no fibrous, small roots to nourish it, it is very likely to die.

An Evergreen, root-pruned and transplanted two to four times in the Nursery, will develop enormous masses of fibrous rootlets. The tap roots are prevented from growing and small roots take their place. The small illustra-

tions here show this—note the increased growth of roots after each pruning. Root masses like these—developed in this way—make tree value for the Evergreen buyer.

The greater the number of root-prunings and transplantings an Evergreen receives, the better it is—the more sure to grow when set into a Windbreak. Four times root-pruned and transplanted trees are the top-notch stock—finest produced in this country for Windbreak purposes. They are a paying investment for any man—are sold under a binding Guarantee that insures satisfaction to the purchaser.

The best trees that grow, however, are only as good—so far as the purchaser is concerned—as the methods used in preparing and packing them for

shipment. Unless that is rightly done they may reach the buyer dead or so weakened as to be useless for planting. To insure unimpaired vigor when they reach destination they should be thoroughly "mudded" at the Nursery and carefully packed and boxed with roots protected and tops exposed freely to the air. The best material known for packing is a mixture of moss and red cedar shavings—well-"mudded" trees packed in it can be shipped any distance.

If you buy trees that are **right** on these three points, proper care and cultivation will insure you a Windbreak. Success will depend on your own efforts—if you follow instructions your trees will grow.

GUARANTEED EVERGREENS FOR WINDBREAKS

Sold on New Plan—Bonded—Insured

The greatest Evergreen offer ever made by anybody, anywhere. Finest—strongest—most perfect—best rooted Evergreens that grow in the ground sold under a wonderful new plan. "Safety First" for **you**—value absolutely guaranteed and insured. You take no chances—run no risks of failure. The opportunity of your lifetime to start **right** to grow a Windbreak.

Says ... "Pay Only For The Trees That Grow!"

That's the big feature of my new plan. You're not asked to pay one penny for any Ferris Evergreen that does not grow for you in your Windbreak Row. **You buy a Windbreak growing right on your farm** when you buy my famous Ferris trees under the terms of my great new plan. The money you put into Ferris Evergreens insures you a Windbreak—no "ifs" or "ands" about it. My trees will grow for you—I'll prove that to you before you've paid for them—and my prices save you 30 to 60 per cent.

My $25,000 Bond

And Fair Terms Protect You

I make you **safe** when you buy—give you an ironclad written contract-guarantee backed up by a $25,000 Bond. I guarantee my trees true to name—guarantee them to be perfect trees, **four times** root-pruned and transplanted—guarantee them to reach you alive and in good growing condition. Lowest prices ever made on trees of this quality—fair, square, easy terms. Part payment, cash with order, which only pays cost of handling and preparing trees—balance remains in your own pocket until end of first season, then deduct from balance for dead trees, or pay balance and I'll replace all dead trees free. I take all the chances. I can afford to because I know my trees will grow and absolutely satisfy you. I grow them myself, every one of them, and I **know** what they are. I know that a trial order will convince you of the superiority of my trees.

Remember This Ferris Trees Are Best—Prices Lowest

I don't care where you buy or how much you pay you **cannot** buy better trees and all kinds of nursery stock than I'm offering you. Better ones don't grow. You can compare Ferris' stock on quality and price with any other ever offered—if you don't decide that I'm giving the biggest, surest value, I don't ask you to buy of me.

Just a Few of Many Bargains

This is the best collection of Hardy Shrubs we have ever offered. All large, two year old, field grown, with extra good roots and tops. 2 Hydrangea, worth 70c; 1 Snowball, worth 50c; 1 Purple Lilac, worth 35c; 1 Cornius Siberica, worth 50c. Our special advertising price only .. **$1.45**

A model orchard of 30 hardy fruit trees. True to name, northern Iowa grown, two years old, average 4 feet and over. 5 Red Astrachan, best early summer apple; 5 Iowa Blush, good quality winter apple; 5 Peerless, winter apple; 5 Gano, long keeping winter apple; 5 Delicious, the grandest fancy apple ever produced; 5 Early Richmond cherries. 90% of all cherries grown in Iowa and other northern states are Early Richmond. Only $3.65. **$3.65**

100 transplanted evergreens, 10-15 inches high. Your choice of White Pine, Jack Pine, Scotch Pine and Norway Spruce. Only..... **$4.50**

$1.50 100 3-year seedling evergreens, 6-10 inches high by parcel post, prepaid. Your choice of Norway Spruce or White Pine. Only $1.50.

Big Catalog—Bargain Bulletin

And Special Terms FREE—Write Today

Get the Ferris catalog and special Guaranteed Evergreen bulletin, books you need, crammed full of bargains on high quality, **guaranteed** nursery stock. Tell you how I grow my famous trees, why my customers say "Ferris trees are best on earth," and why they buy from me every season. All about my way of selling—why I can save you money on any nursery stock you want. Don't buy nursery stock until you have looked through these books and compared my prices with others. Write for them and complete information about my $25,000 bond offer on guaranteed Windbreak Evergreens.

Wonderful Strawberry Sold on Our New Guarantee Plan

Ferris' Improved Progressive Everbearer, the greatest everbearing variety ever produced. Bears continuously—July until frost. Berries large, delicious, deep red in color, none better grown. Yield large. Plants hardy, strong, bear first season. Sold under guarantee and easy payment plan—**You pay only for plants that grow** and bear first season up to frost.

THE WISCONSIN FARMER

VOL. XLVI. NO. 3. THURSDAY, JANUARY 18, 1917. WHOLE NO. 1825

MAKING MARSH SOILS PAY.

WHAT may be accomplished on Wisconsin drained marsh lands, of which there are thousands of acres in this state, when the proper methods of cultivation are practiced, is well illustrated by the experience of Mr. John Sautter on his farm in Portage county, near Bancroft, on what is known as the Buena Vista marsh. Mr. Sautter, after several years of failures, has finally brought his farm to a stage of good production and his experience should be of considerable benefit to those already farming this class of soil or who contemplate buying marsh farms.

Mr. Sautter's experience, since he left a tenant farm in central Illinois eight years ago, has been fraught with many disappointments and has demonstrated beyond doubt that the lot of the marsh land farmer is not an easy one. His dream of the "wonderful opportunities" pictured by the land men has been punctured. This 240-acre farm was drained by big ditches a mile apart, without any tile between the ditches, but Mr. Sautter is convinced that supplementary tile drainage on this type of soil is absolutely essential and that it requires more than the manure produced on such a farm to put the land in good condition. He is also convinced that grain and corn is not the profitable type of farming, but that dairy farming will prove much more profitable on this type of soil. These conclusions Mr. Sautter has drawn after eight years of actual experience and he has found that, though his farm was apparently cheap per acre when he bought it, that it is expensive to put it into productive condition. On the other hand, he has also found that this expense has been more than offset by the increased yields and consequently increased profit.

Mr. Sautter broke and planted to corn and grain quite a large acreage the first year. The land had been pictured to him as well drained and especially adapted to these crops. Standing water on some of the fields in the spring handicapped him as well as water after heavy summer rains and his first crops were failures, excepting small areas which had been burned over and where raw, spongy, peaty surface soil has disappeared, leaving instead an accumulation of ashes on black soil. He tried the same crops the second year, again the third and fourth years, each year losing more money. He blamed seasonal conditions. The only good crop was wild hay and it did not contain sufficient nourishment to feed the cattle he brought with him from Illinois.

Then the tide turned. Four years of failures had started him to reading and studying and in 1913 he fertilized ten acres with phosphorus and potash. He still held to grains, but the late spring prevented him from seeding oats, so he seeded barley, but this crop failed. In 1914 he bought more fertilizer and his neighbors told him he was wasting his money. Then it was that Mr. H. W. Ullsperger, instructor in soils at the college of agriculture, was called in and experiments began that are of much value to owners of peaty, marsh lands.

The first thing was to change from the grain type of farming to dairy farming. Mr. Ullsperger pointed out the need of commercial fertilizers; discussed the advantages of supplying phosphorus as either bone meal or acid phosphate and potash as muriate of potash rather than buying mixed fertilizers. Then twenty acres of potatoes were planted, the remainder of the farm being turned to oats, hay, rye and corn. Rye on fertilized acres yielded eighteen bushels per acre; on fertilized, seven bushels. Potatoes were almost a failure on unfertilized plots, but went 110 bushels on fertilized areas. Manure on the potato fields tended to produce scab, not apparent with commercial fertilizer. The result this year was that after selling his crops and deducting expenses, Mr. Sautter had a profit of $1,200, the first profit since he settled on this farm.

That fall more fertilizer was purchased. This brought his total fertilizer expense to $1,100. In 1915, corn, Early Ohio potatoes, rye, oats and timothy were the principal crops on seventy-five acres, properly fertilized. His rye went 1,000 bushels on twenty acres; potatoes, 3,000 bushels on twenty acres, and enough oats to feed his stock and corn for silage, although caught by the frost. That year, after paying for his fertilizer and other necessary expenses, he had $2,500 profit. This he used to establish a dairy herd and his pasture on fertilized land is producing a good flow of milk and does not scour as formerly. This has brought him to the conclusion that dairy farming is the proper type on this soil.

No fertilizer in 1916 was bought, because potash was unavailable on account of the war. Crops were put in on previously fertilized land, and though the dry weather cut the yield of oats and rye, his potatoes went seventy-five bushels to the acre, hay three tons and his 1916 income in estimated at $2,500 in addition to the income from his ten dairy cows.

To summarize the work since he began fertilizing in 1913, Mr. Sautter has spent $1,100 for fertilizer and his income is approximately $7,000, or a return of approximately $6 for each dollar invested.

Others in Portage county are now using fertilizer, but Mr. Sautter was the pioneer. There was a time when the value of commercial fertilizer on this type of soil was in doubt, but Mr. Ullsperger believes Mr. Sautter's experience with other demonstration has indicated the method to be followed. Any farmer may secure the services of the soils department of the college of agriculture at a small cost if he has these problems to contend with, and in buying marsh lands it is urged that particular attention be given to fertility, complete drainage and crops raised in the locality. Mr. Sautter bought what he thought was well-drained land, but each year he realizes the yields are appreciably smaller because of poor drainage and that supplemental lines of tile, draining into the open ditches and laterals, are necessary.

Mr. E. R. Jones, in charge of the drainage division of the Wisconsin College of Agriculture, tells us, in bulletin 229, how small marshes may be organized under the town ditch law. He says that six or more freeholders in any town in Wisconsin may petition the town board to lay out a ditch or main tile, according to plans based on a survey which the landowners have caused to be made of the marsh land, whose drainage is proposed. If the supervisors of the town favor the plans, or if they are forced to act by a successful appeal to the county judge, they let the contract for the construction of the drain, allow damages to parcels of land damaged, and apportion the cost among the several parcels of land benefited whether the ditch or tile actually touch a particular parcel or not, and whether the owner is willing or not. They should, however, assess the land touching the ditch or tile higher than that farther away.

HAY ON MR. SAUTTER'S FARM, BANCROFT, WIS.
Fertilized in 1915. Yield, 3 Tons Per Acre.

RYE FIELD ON JOHN SAUTTER'S FARM.
Fertilized in 1915 With Acid Phosphate and Potash. Yield, 25 Bushels to the Acre. Corn Plats Unfertilized.

4 H.P.—190 lbs.

The 4 H. P. Cushman Handy Truck is the most useful outfit ever built for farm work. Engine weighs only 190 lbs., and entire outfit only 375 lbs.

Besides doing all farm and household jobs, this 4 H. P. Cushman may be lifted from truck and hung on rear of binder during harvest to save a team. In wet weather it saves the crop.

Light Weight Cushman Engines

Built for farmers who need an engine to do many jobs in many places instead of one job in one place. **Throttle Governed,** with Schebler Carburetor. Run very quietly and steadily—not with violent explosions and fast and slow speeds like old-style heavy-weights. Engine Book free.

CUSHMAN MOTOR WORKS
855 N. 21st Street Lincoln, Nebraska

8 H.P.—320 lbs.

Pull Big Stumps by hand

Clear your stump land cheaply—no digging, no expense for teams and powder. One man with a K can rip out any stump that can be pulled with the best inch steel cable.

Works by leverage—same principle as a jack. 100 pounds pull on the lever gives a 48-ton pull on the stump. Made of Krupp steel—guaranteed against breakage. Endorsed by U. S. Government experts.

HAND POWER **K Stump Puller**

Questions and Answers.

Fire Clay.

I am building a small forge where intense heat is to be used. My plan was to use asbestos and fire clay, mixed half and half. Would the asbestos protect the clay? Where can I secure a good grade of fire clay? Is there any material that will stand up longer under intense heat than fire clay?

Answer.—We never heard of asbestos being mixed with fire clay and we think that you will get better results from the fire clay alone. We know of no better lining for a furnace than fire brick set in fire clay. These bricks may be obtained for different sizes of circular furnaces, as well as for square furnaces. Any dealer in cement and mortar should be able to supply you.

A Three-Horse Evener.

Several years ago I saw in your question and answer department how to make a three-horse evener for a wagon. I would like to see it published again.

Answer.—A good three-horse evener for a wagon is a difficult problem. We received word from one of our subscribers that the one we published last June was not a success. We publish in this issue a sketch of an evener that should work fairly well, as it is similar to the Gamble and the Heider eveners that have been on the market for years. As a rule, it is better to purchase an evener than to make one, as some of the large implement concerns are putting out eveners at a very low cost.

The evener illustrated is really a three-horse evener for a sulky plow or drag, attached to the wagon tongue by means of a diagonal chain above; and a straight chain below to keep the doubletree from shifting endwise toward the single horse. The diagonal chain is the pull chain. It is fastened to the rear end of the tongue of the wagon by means of an iron, bent as shown in the small figure at D; and drilled to take the draw bolt that fastens the tongue together. It may be stiffened by a piece of pipe fit in between the U part of D. D should be made of strap iron not less than three-

quarters of an inch thick and two and one-half inches wide. The chains should have links made of seven-sixteenths-inch rod. The lower chain runs from the bolt, E, to a bolt in the coupling pin hole in the tongue. The evener bar C, is not pinned to the tongue.

The singletrees are ordinary plow singletrees, twenty-eight inches long. Wagon singletrees thirty-six inches long may be used also, in which case the other parts must be lengthened accordingly. B is a doubletree made of hickory, two inches thick and four inches wide. A U-shaped strap made of strap iron one-half inch thick and two inches wide is used at the coupling pin to keep B from tilting. The singletrees are coupled to B and C by ordinary clevises. For twenty-eight-inch singletrees B should be about thirty-six inches long, the holes being drilled about three inches from each end. C should be made of hickory two inches thick and five inches wide. For twenty-eight-inch singletrees C should be about fifty-two inches long, the end holes being located three inches from the ends, and the draw chain clevis hole seventeen inches from the end hole for the doubletree coupling pin.

Changing Carburetors.

We have a 25-horse-power 1915 Maxwell car that has a Kingston carburetor. The motor leaks around the valve stems and is very hard to start. How would a Holly carburetor work on this car? Would the Schebler carburetor work well, and if it would do, which model would work best? Where are these two carburetors made?

Answer.—No carburetor is likely to work perfectly on a car having considerable air leaks at the valve stems. It would be worth the cost to you to have the defective parts replaced. Any of the three carburetors mentioned should work all right on your car after the air leaks are stopped. In its present condition a Model L Schebler might work the best. The Schebler carburetor is made in Indianapolis, Ind.; the Holly is made in Detroit.

Making Small Engine Pull Itself.

I have a one-horse-power gas engine mounted on a truck. I would like to make it move by its own power. It runs 500 r. p. m. The rear wheels are fifteen inches in diameter. It is a Fairbanks-Morse engine. Would I have to put it on a new frame, or could I fix it some way as it is?

Answer.—If your engine is mounted on the truck with the crankshaft parallel to the side of the truck you might drive the truck from a friction disk bolted to the end of the crankshaft or to the flywheel, as was recently illustrated. If the engine sets crosswise the truck mount a jackshaft under the truck. Have a tight-and-loose pulley on the jackshaft, driven from the engine pulley. Drive the rear wheels of the truck by chain and sprocket from the jackshaft.

Replacing Electrolyte.

Would you kindly advise me about changing the fluid in my storage battery? The battery has been run two seasons, during which time nothing but pure water has been added. Lately the battery seems to run down rather fast. Folks tell me the acid is too weak, and must be changed. How must this be done?

Answer.—Have your druggist mix you enough concentrated sulphuric acid and distilled water to fill your cells, the strength of the solution testing about 1.22 at 60 degrees Fahrenheit. Give your battery a complete charge before removing the old electrolyte. Then remove the old electrolyte, pour in the new, and recharge the battery at once. The cells should not be filled clear full, but the plates should be covered at least half an inch.

Ford Magneto Trouble.

We would like some advice about our Ford magneto. The motor will begin to misfire, and keep gettting worse until it will stop, when running on the magneto. It will run as good as ever on the battery. After a day or two, it will run all right for a while on the magneto. We have been unable to find the trouble. The magneto was put on new about two years ago. Can you give me the address of the following magazines: Motor, Motor Age, Automobile, and Automobile Topics?

Answer.—It might be that the insulation on the magnet windings is becoming poor, and that carbon in the oil causes a partial short circuit. Keep clean oil in the transmission case. However, the trouble is more likely to be at the magneto contact—the wiring terminal directly over the magneto. Remove the three screws that hold this part in place; clean the spring and the brush thoroughly, and see that they work freely in the post. For good results, the brush must make good contact with the magneto.

The addresses are: "Motor," New York City; "Automobile," 319 West 39th St., New York City; "Automobile Topics," 1790 Broadway, New York City; "Motor Age," 910 South Michigan Ave., Chicago, Ill.

GOOD MEN WANTED TO LEARN THE AUTO BUSINESS

Any ambitious, capable young man can make a success for himself, and if you will only prepare yourself, you will get work, because positions are open, waiting for competent men to do Auto and Electrical work.

The American Auto College develops your talent for a splendid, big paying trade. Our course has been enlarged with lots of new work—principles of Knight Motors, 8 and 12-cylinder Engines of new models, Tractors, new Starting Systems, Magnetos, Wiring, Coils, Welding, Brazing, Lathe work, Milling and Drill work, Tool making, Overhauling and Repairing, and all the newest, up-to-date Auto equipment.

AMERICAN AUTO COLLEGE

$900 TO $3,000 SALARY OR BUSINESS PROFITS PER YEAR

Positions Are Open Tinker repair men are let out as fast as good men are found to take their places. Garage men, letters and telegrams come to us asking for good men. Just prepare yourself and your future and success will be started. Think of the good time, and the money you can make.

LIFETIME OPPORTUNITY—It's up to you to be either a common, hard-working laborer or else learn a good business. Thousands of men will go into the Auto business within the next year. Be one of them. We want you to. Get started right away. Learn here where the opportunities are greatest and best, by our system of actual work in our large shops. No books used; we furnish tools. You do the work yourself. Our men learn easily and quickly because practical work is the best.

KEROSENE ENGINES
OTTAWA LATEST DESIGN

Durable, Powerful, Reliable, Massive. Built to last; to do hard, heavy work. Uses Cheapest Fuel. Pull ¼ to ½ horse-power more than rated. ***3 Months Trial. Easy Terms.*** Sizes 1½ to 22 H-P. Easy to start. No Cranking. No batteries. **10 Year Guarantee.** Most practical engine ever built. Engine book free. A Postal brings it.

THE OTTAWA MANUFACTURING CO.,
1191 King Street, OTTAWA, KANSAS.

Tell what you have for sale in a little advertisement in THE FARMERS' MARKET. Does not cost much and may be worth a lot to you. Six cents a word each insertion.

The Wisconsin Farmer

THURSDAY, JANUARY 18, 1917.

FAMILY CIRCLE TALKS BY THE PUBLISHER

WISCONSIN'S PAST, PRESENT AND FUTURE.

EXCAVATORS among the ruins of one of the old Babylonian cities recently came across the crumbled foundation of what had evidently been designed for a noble palace. There was no indication as to why the plans of the royal builder had not been completed, but it is safe to presume it was due to the interruptions of war. On the cornerstone was graven the words, "After me cometh a builder; tell him I, too, have known."

I know of no state that owes more to its early builders than does Wisconsin. Blessed at the start, with New England pioneers of high ideals and with infusions of the sturdiest blood of the Old World, the foundations were laid truly and well for the magnificent social and political structure which has been erected on them and which we know as the Wisconsin of today.

Our state history is filled with glorious traditions of the noble men and women who wrought and toiled that we might live in comfort and plenty, overcoming hardships that would have discouraged a less vigorous race of settlers. It is they who made Wisconsin great, who made possible her present supremacy among the sisterhood.

All this came over me anew, with a sense of personal obligation, as I was glancing over the old files of The Wisconsin Farmer in an idle moment the other day. In the very first issue, published at Racine on January 1, 1848, I came across the following words, whose prophetic vision almost startled me with its accuracy.

> There is a spirit of improvement abroad with reference to agriculture. Improvements may be made, but there will still be room for other and greater improvements. The result of the improved practice of a few farmers shows that good lands may be made to produce double the amount raised by the usual mode of husbandry, and that sterile and barren soils may be reclaimed and made to pay good interest on $100 and $200 an acre.

When it is recalled that those words, which might be printed in these columns today, almost without alteration, were written nearly seventy years ago, the foresight of their author appears almost startling. In the Wisconsin of today we see the fulfillment of the prophecy of The Wisconsin Farmer of 1848.

I found myself wondering if seventy years from now some future editor of The Wisconsin Farmer, glancing through these pages, may not run across my vision and hopes for an Upper Wisconsin that shall be a land flowing with milk and honey and find in it the fulfillment of my dreams. If so I wish to commend to him not only my own prophecy of the bigger and better Wisconsin, which is coming as surely as hope springs forever in the human breast, but also the words I have quoted above, from my predecessor of seventy years ago, which will be nearly a century and a half old when he reads them.

To him I would commend such words as the Babylonian king of old—"After us cometh a builder; tell him we, too, have known."

THE FARMER IN PUBLIC AFFAIRS.

WITHIN the last fortnight two of the ten states of the grain belt inaugurated farmer governors. A third elected a farmer speaker of the house of representatives of its legislature. The farmer is dominating public affairs nowadays as never before.

The farmers' revolt against industrial injustices in North Dakota is one of the most interesting movements in the country today, in my opinion. It is succeeding beyond the fondest hopes of a few months ago. The determined farmers who left their harvest fields last summer and, in the face of storm, and flooded streams out of their banks, pushed on until they reached the polls, have won a victory which deserves to rank alongside the historic victory of the embattled farmers at Lexington, at the beginning of the war to free the thirteen colonies from the tyrant. North Dakota not only has a farmer governor, but it has a farmer legislature. I look for such reforms to be inaugurated there this winter as will leave no question in the minds of anybody as to the progressiveness of the farmers of the middle West.

But North Dakota, although it has moved a little faster than its neighbors, is not altogether alone in the campaign to give the farmer the recognition which has long been his due. The new governor of Illinois, Mr. Frank O. Lowden, is a product of the farm and owns one of the finest farms in the country today. He was born on a farm in Minnesota and moved, with his parents, in a prairie schooner, to another farm in Iowa when only seven years old. He is proud to be called a farmer, and he is not of the curb-stone school of agriculture, either.

Iowa deserves a place alongside North Dakota and Illinois, in recognition of farming interests, for the legislature which is now in session at Des Moines contains more farmers than any other class of workers. Not only that, but in electing Hon. M. B. Pitt, of Logan, speaker of the house of representatives last week, it chose an Iowa farmer of the highest type for this responsible position. It is positively infectious, this spread of farming enthusiasm and domination in public affairs nowadays.

Look at the financial world, for instance. The presidents of the two largest banks in America came from farms. More than that, they came from farms here in the grain belt. I refer to Mr. Frank A. Vanderlip, of New York City, and Mr. George M. Reynolds, of Chicago. The latter was a plow boy until he was sixteen or seventeen years old. He is a product of the typical farm and country town.

Whichever direction I look in public affairs nowadays, I find the figure of a farmer looming large, dominating affairs, dictating measures, directing men. It is a good sign of the times, and gratifying. I know of nothing which gives me greater hope for the future. Our affairs are in safe hands, when the patriotic, progressive farmer holds the reins of leadership.

SAFETY AT RAILROAD CROSSINGS.

FOR some unaccountable reason the man who drives an automobile is not as careful as the man who drives a team of horses. The man in the motor car approaches a railroad crossing at a high rate of speed; there is danger on the crossing, but all too many drivers ignore or belittle it, with the result that hundreds upon hundreds of lives are needlessly lost every year.

I have before me, as I write, a report of the California railroad commission, showing the comparative carefulness (or carelessness) of automobilists, drivers of teams and pedestrians. I can sum it all up in a table in this manner:

	Auto drivers	Team drivers	Pedestrians
Looked neither way	69.5%	39.4%	49.1%
Looked one way only	2.7%	8.6%	15.0%
Looked both ways	27.8%	52.0%	35.9%

In brief, the driver of a team of horses is far more careful when danger impends than is either the automobilist or the pedestrian. This is a remarkable tribute to the farmer, for while automobiles are being driven by farmers in large number, there is no question but that far more teams are driven by country people than by city folks and it is the team driver who is the most careful.

The Public Utilities Commission, of Illinois, makes official recognition of the team-driver's comparative carefulness in this manner:

> The transition from team to automobile traffic in the last few years has been remarkable. * * * Automobile drivers will not approach a railroad crossing in the same careful manner as will the driver of a team.

Will not those of you who drive motor cars resolve to be more careful hereafter, to hark back to the ordinary prudence and caution which you manifested when you were dependent upon a team altogether, and had no thought of ever possessing a car of your own? After all, what is there about an automobile that should change our very natures and make reckless speeders of the most prudently cautious?

In conclusion, let me print a little warning note, which I find in the "safety first" advertisement of one of our large grain-belt railroads:

> A train running sixty miles an hour goes eighty-eight feet in one second and cannot be stopped in much less than a quarter of a mile.
> An automobile running twenty-five miles an hour can be stopped in fifty feet.
> A horse or team can be stopped quickly.
> A pedestrian can stop almost instantly.

There is a moral to this comparison, and I hope it will not be lost upon you. It is better to be careful than to be sorry the rest of our lives, or to lose our lives in a foolhardy manner.

A SORRY STRUGGLE IN TOWN.

SOME weeks ago we carried on a most pleasant and profitable discussion, here on this page, as to the advisability of quitting the farm for the town or city under any circumstances. I thought the discussion was at an end, but a letter which reached me this past week added so many interesting and material facts, I believe I will reopen it for a few minutes in order to print this letter. It was written by "a mother homesick for the farm again" and was inspired by the fact that the public sales this year promise to be more numerous than ever before, testifying to all too many farm families tearing themselves up from the earth of the country and transplanting themselves to the pavements of the cities. The recurring plea of this homesick farm mother is this: "Don't leave the farm." Let me tell you how she and her loved ones fared, after she had spent twenty-six years of married life on a grain-belt farm. They sold their fine stock and rented a little suburban place in some town or city, she does not give the exact location. And here is how they fared thereafter:

> The plot of ground on which the house stood (the house was not modern in any way) was void of shade, grass and everything which grew in such abundance out on the farm and had added to our comfort. This plot of ground we found was so poor in soil and so worn out that we could not raise enough vegetables to supply the table for only three in the family, after careful planting and strenuous cultivation. When fall came, for the first time in twenty-six years, our cellar was empty of the abundance of vegetables and fruits, cured meats, lard by the gallon, eggs put down by the forty-dozen lot for home use, and all the other things which the farm had produced so abundantly.
>
> The chicken industry for residents in town, as a side line to keep down the high cost of living, has been lauded to the skies, both for women and men. Well, we tried it out on that plot of ground. We went out and found the best eggs we could get, paying a good figure. When the baby chicks were three days old the city officers came down with a warrant. Three of those baby chicks had got through the fence into the garden of a neighbor, so the city officers came out and fined us. Yes, sir, fined us for trying to earn an honest dollar. The passing automobiles got their share. The dogs and stray animals had theirs, too. When fall came the poultry business in town looked mighty dubious to all of us. And the prospect for the future is no brighter, no matter how hard we struggle.

This discouraged, homesick farm mother figures that one year's residence in the city has already cost them several thousands of dollars, for they have been obliged to draw out some of the savings of the happy years spent on the farm, some of the proceeds from their public sale of land and stock. Is it any wonder that she cries out:

> All summer I have looked out over the growing fields of waving grain with a great homesickness. My heart was out there in the country, with its freedom, its quietness, its coolness. As I passed along the fields and farms and saw the grain and stock, grazing in God's sunshine everywhere, oh I could not express the longing to stay there. Stay out there on the farm; keep your boys and girls there with you.

She goes on to make a plea for the boys and girls of the farm, that they be given something to call their own, just as I have pleaded with you here many a time. This homesick farm mother adds weight to what she says by citing her own experience:

> When I was a girl at home father gave me all the orphan lambs I would care for. By so doing, in time he sold them and bought me two young heifers. They were cows when I went to a home of my own and father gave them to me. From those two heifers we built up a good herd, the beginning of our possessions with which we were so happy and prosperous on the farm for twenty-six years, but which we gave up when we moved here to town.

I had no intention of reopening this subject, in the very near future, until this letter came to me, but I believe I would be making a grave mistake if I did not pass it along to you. Many of us are tempted, at some time or other in our lives, to pull up and quit the place where we have lived so long; life in the old place seems to be getting monotonous, we crave a change. Will we not do well to read this letter from the well-nigh heart-broken farm mother and heed its lesson before we take the step that may land us, forever, outside the happy circle of peace and prosperity and progress? There are many things to be considered when we start life anew in middle age; or when we put behind us the customs and friends and work of a lifetime to launch out into an altogether unknown venture. Read this letter from the homesick farm mother and think it over well and carefully. It may be the means of keeping you from committing a big mistake, one which you will regret the rest of your life. It is practical testimony such as this, based on our actual experiences, which sheds the best light on the subject. We have opinions and prejudices many times, but actual facts will more quickly convince the incredulous. I consider this a most valuable letter.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-in-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Avenue Des Moines, Iowa — 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscriptions or advertising may be addressed.

MEMBER AGRICULTURAL PUBLISHERS' ASSOCIATION. MEMBER OF AUDIT BUREAU OF CIRCULATIONS

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of 100 or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription price in Canada $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as before or state both the old and new names and explain why you change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address

The Wisconsin Farmer Madison, Wis.

Co-operative Live Stock Breeding.

Some twelve or thirteen years ago the organization of co-operative live stock breeding associations began to be advocated and a few associations were organized two or three years later. Progress was slow at first, as is the case with all co-operative movements; still here and there the plan was bringing results and registered sires were being used on farms where none but scrubs had been used before.

Today co-operative breeding associations are quite numerous in some localities. Wisconsin leads with 136 associations and Michigan, perhaps, has the next largest number. In some of the leading dairy sections of New York considerable progress has also been made in the line of community breeding.

The object in co-operative buying or community breeding is to arouse greater interest in the particular class of cattle or other live stock that has proved to be best adapted for a given locality, to secure greater uniformity in the live stock throughout a certain neighborhood, to make it possible through co-operative buying to secure good breeding stock at a lower price and to increase the number of individuals of a certain breed in a community and thus attract buyers for any surplus sale stock that may be raised from year to year. In all these particulars the well managed associations have been very successful and their success should serve as an incentive for the organization of others. So far most of these associations have been organized by dairymen. In Wisconsin, for example, four-fifths of all the breeding associations deal with dairy cattle, but that state also has two associations breeding beef cattle, ten breeding horses, two swine and fourteen breeding general live stock.

When a breeding association has been organized a committee of the best posted live stock men in the association is appointed to buy bulls or female foundation stock for all the members. In this way a saving in original cost due to buying on a larger scale is effected and transportation charges are also reduced because stock can then be bought by the carload instead of a dozen or more individuals buying two or three head each. Then, too, greater uniformity in the cattle purchased is secured when one set of men does the buying, and that in itself is a matter of considerable importance when the members reach the stage where they have stock for sale.

At the end of two years all bulls that have proved to be good sires are interchanged between the members of the association, thus making it possible to keep worthy sires throughout their entire period of usefulness. This is a matter that has proved to be of great importance not only because it effects a great saving but more particularly because it offers the finest chance in the world to find the real meritorious bulls, retaining them in the community and getting the full benefit of their breeding powers. The real value of a dairy bull cannot be determined till his heifers come into milk or until they have completed two full lactation periods. A bull that cannot be retained in a given herd more than two or, at the most, three years, because of inbreeding, has no opportunity of demonstrating his real value, but when he can go into another herd in the same community until his first heifers have demonstrated their value as producers, he may be considered much more valuable at five or six years of age than he was as a two year old.

After a bull has established a reputation as a producer of high-producing daughters his progeny from the best females in the community will quickly raise the standard of the stock of all the members of the association. This is perhaps the greatest advantage that arises from community breeding. There are many other advantages, however. Where a number of men are banded together for the same purpose more interest is taken in the common work, and there springs up a friendly rivalry among the members that accrues to the benefit of all.

Those of our readers who are interested in organizing breeding associations should correspond with the agricultural college authorities in their respective states, as it is frequently possible for those institutions to send a man or two to help organize associations, or to fully explain the advantages of such organizations.

Profitable to Give Good Care to Auto.

Nearly all our agricultural colleges are now giving courses in what might be called farm engineering. Special attention is being given to the automobile, and owners are seeking information that will enable them to get better service out of their cars at a less cost for fuel, oil and general upkeep.

Five years ago the automobile was looked upon largely as a luxury, but more and more it is viewed in the light of a necessity. The body designs are not changing as rapidly as formerly and the majority of owners are settling down to the belief that they will get years of service out of a car. The Wisconsin Farmer is contributing to this end by offering to its readers the services of an expert who is in charge of the farm mechanics department of this paper. The man who is contented to simply put gasoline, lubricating oil and water in his car and take his place at the wheel without any understanding of the mechanism which is under his control is bound to face some big expense items in the end. Not that we are advocating that any owner "tinker" with his car, but rather that we believe in the policy of getting just as much information about the type of machinery that you are handling as is possible to obtain.

Interesting as has been the farm mechanics department in the past, we believe that its usefulness can be increased in the future if automobile owners will submit to this paper their difficulties. The service rendered by this department is not confined to automobiles, but rather to all types of farm machinery that call for expert knowledge in their handling. The colleges are doing good work and we endorse it most enthusiastically, but after all, only a small percentage of auto owners or gasoline engine owners take advantage of that special form of instruction. We, therefore, hope that all our readers will keep in mind the service that this paper is offering free of charge to any of its readers who are in need of aid along this line.

Uses Both Farm Wagon and Farm Truck.

In a discussion of timely topics it is seldom that the farm wagon or farm truck ever comes up for consideration and yet both are important parts of the equipment of every farm. In the following communication one of our subscribers, Mr. J. K. Rodgers, gives his observations and experience about the use and care of the farm truck and also the farm wagon:

On our farm we have found that the farm wagon is the cheapest part of our equipment. We use it twelve months in the year, and there is seldom a week passes that it is not in evidence. We know that while a farm wagon, with proper care, will last at least twenty years, it is possible to cut the life of a wagon in half by using it carelessly and failing to keep it under cover when not in use. A wagon has a guaranteed carrying capacity of so many pounds; and we govern the load according to the condition of the roads. We have found it pays to keep the wagon in its shed when not in use. When exposed to the ravages of the elements the iron rusts, and the box decays. One farmer who has no shed for his wagon, finds that a tarred wagon sheet gives good protection. Not long ago a wagon was sold at a public auction. It had not been in use many years, yet it was ready for the junk heap. Exposure to the elements (weather extremes are sudden and severe in this section) had ruined it.

A farm wagon is not a farm truck; these are two distinct articles. Both have their places on the farm; but a farm truck is not built to withstand the service required of a wagon. We have seen it proven, that while the truck will do the heavy work generally expected of a wagon for a short time, it is not economical for heavy work, because the heavy loads reduce its life to such a short period of time that the higher price of a wagon is more than offset by its greater endurance. We get best results from the truck by using it for light work about the farm. In company with other farmers who own wagons and need a vehicle for supplemental work, we get much service from the truck. For use on the farm the broad tired truck is superior to the narrow-tired wagon, it may be drawn with greater ease over soft soil, and when hauled over alfalfa meadows, etc., the broad tires do not cut through and injure the plants. We use broad-wheeled trucks under hay racks at all seasons of the year.

Wagons offered for sale at the present time may be listed as good and "fairly good." When judging the quality of a wagon we first consider the wheels. The greatest strain comes on the wheels. The wagon with poor wheels is a poor wagon and will not give satisfactory service. Next we consider the axles and skeins; for the next greatest strain comes on these. Some wagons have strong axles and skeins, but are burdened with poor wheels. We do not use this type.

The double box is a great convenience, when buying a wagon box few men can be certain what they are getting, for wood of poor quality can be covered over with paint and varnish. Usually dependence must be made upon the manufacturer's reliability and reputation for fair dealing.

Nearly every implement on the farm excepting the wagon is used only for a short period during the year, and this in itself would suggest that it be given good care, and by this we mean given protection from the elements when not in use. As a labor saver the truck unquestionably has an important place on the farm. Primarily it is designed to transfer from the shoulders of man to those of the horse many of the heavier tasks, and this applies during the haying and harvesting season, in the hauling of manure where a spreader is not available and in all light work about the farm. It is designed, as this subscriber says, for supplementary work and there are scores of uses to which it may be put every month of the year.

Since this topic has come up for discussion we would be very much pleased if some of our readers would give their experience regarding the service that they have had from the truck. Those who will undertake to do this for the benefit of readers of this paper should name the various tasks that they perform with the truck rather than with the wagon. Is it possible to use one truck and one wagon where ordinarily two wagons are used, or, on the other hand, has it been found necessary to use a truck as an "extra" where ordinarily two wagons are required? There are many phases of the matter that will present themselves to those who undertake to discuss this subject and we hope several of our readers will give their views relative to this matter.

Compel the Brood Sow to Exercise.

In spite of the fact that the hog has earned his title "the mortgage lifter," there are numerous instances that can be found each year in every county of the corn belt where an attempt to raise a considerable number of hogs turns out to be a flat failure. In most cases the breeder who falls down could trace his misfortune to one or two brood sows or in the care of the young pigs. It is our opinion that more loss is due to the fact that brood sows are not properly exercised during the gestation period than from any other, or from all other causes combined, and that being the case we propose now to outline a system which we know from past experience brings good results.

At the present time most of the gilts and old sows kept for breeding purposes are running with the fattening hogs, and for a time this may be allowed. There is always advantage in having breeding stock in fairly good flesh, and in order to bring this about it is entirely practicable to flesh up the sows during the early part of the winter. It is a mistake, though, to handle sows in this way too long, because their ration is invariably too strong in corn, and they will get too fat for best results. Sometime during the month of January, in case sows are bred to farrow early, they should be separated from the fattening hogs and given quarters of their very own. It is not at all necessary to coddle them, or to provide expensive sleeping or loafing quarters. Some sort of shed is necessary, to be sure, but one that is closed on three sides, with a good roof, will answer the purpose. Even the individual hog-house may be used to advantage, and these are not expensive. If there are a number of sows on the farm, simply place the houses side by side, so that in this way they will make a good windbreak, and a few sows will occupy each pen. We will in a future article outline a sensible system of feeding, but at this time we want especially to refer to the matter of exercise.

Let it be understood in the first place that neither gilts nor sows should be allowed the privilege of deciding how much exercise they need. If they are well fed they will not be disposed to move around much, and every day they will loaf just a little more than they did the day before. To offset this loafing tendency they should be absolutely turned away from their sleeping quarters and allowed to roam over the fields or up and down a lane for hours at a time. Of course, there are periods when the weather is especially cold and stormy, when it will not be advisable to expose them in this way, but during the clear days of the winter months brood sows should be made to spend a considerable part of the forenoon and much of the afternoon on the move.

If no straw is available for bedding they will remain active and their activity may be contributed to by the manner of feeding. It is an excellent plan to have a supply of corn placed at a considerable distance from the outbuildings, and a few ears can be fed from this supply daily. By following this plan it is amazing how many trips the sows will make to this crib during the day. In fact, they will just spend their time going to and from their feeding quarters and, as a result, they are built up in flesh rather than loaded down with fat. We well realize the fact that successful swine breeders are not in need of advice along this line, because they regard this matter of exercise as fundamental. However, we are interested in the individual who is starting out and who is not in a position to stand a heavy loss among his hogs. Where anything like a prolific strain is dealt with there is absolutely no reason why a bunch of gilts and sows cannot be brought through the winter in such a way that they will raise an average anywhere from six to eight pigs per litter, but this cannot be done if they are allowed to spend most of each day in their sleeping quarters. Where exercise is made compulsory it should be kept right up until farrowing date, with the assurance that there will be less difficulty at farrowing time, sows will not become fevered, as is often the case where they are closely confined all winter, and last, but not least, the little pigs will be strong and robust if, in addition to adopting a sensible plan of exercise, the sows have had a ration suited to their needs.

Almost $9,000,000,000 was the aggregate value of all crops of the country last year. In an estimate announced by the department of agriculture, the exact value was set at $8,934,587,000. That was an increase of $2,165,989,000 over the value of 1915 crops, and $2,867,206,000 over the average of the years 1910 and 1914. Texas held its lead as first state in value of its crops, but Illinois, as second state in 1915, was displaced by Iowa last year. The other states of the leading ten in order of value of their crops, were Nebraska, Georgia, Kansas, Pennsylvania, New York, Indiana and Ohio. Except North Dakota, every state showed an increase in the value of its crops last year over 1915.

The 1917 Automobiles on Display

Thousands of People Including Many Farmers Get Ideas on New Cars at Milwaukee Automobile Show in Milwaukee Last Week

THE 1917 automobile offerings were on exhibition in the gaily decorated auditorium in Milwaukee last week. The most prominent fact brought out at the show was that prices on all classes of cars are to be higher. Added to this is the uncertainty of delivery, due to the shortage of freight cars and the congestion of freight traffic in some of the large centers of the country. Those manufacturers who were able to promise delivery at once had little difficulty in interesting the farmers and dealers who attended the show, in their offerings. One firm had brought recently a large number of cars across the state of Michigan and hence by boat to Milwaukee, and these people considered themselves lucky to be able to make immediate deliveries.

That the recent advances in price were but forerunners of further advances was the general belief of the leaders at the show. Materials entering into the construction of cars are advancing every day, especially the metals and upholstery materials. Advances run from 10 to 20 per cent. Those firms which have not received notice recently from the factories covering an advance are expecting such notice almost daily. It was because of this fact that sales at the 1917 show were the largest of any show held in the history of this state.

Three weeks ago The Wisconsin Farmer advised its readers to take in the automobile show, and to be consistent with our advice, one of our editors was assigned to the pleasurable task of looking over the new models. The trip was well worth while.

Offerings in the line of touring cars were not such a marked departure from those of last year, as the offerings in the closed models and the roadsters.

The all-weather car is growing in popular favor and may be secured at an added price which is reasonable considering the service.

A number of chassis models were on exhibition, showing the working parts, and these were of great interest, especially as illustrating the use of good bearings, tires, spark plugs, piston rings, and other things listed as accessories. Tires have come into the "higher priced" class, and recent announcements have shown an advance of 10 to 15 per cent with prospects of still further raises.

Manufacturers and dealers are paying more and more attention each year to the farm trade, and the past season of good prices for dairy and farm products in this state has made the rural trade more than usually attractive. No one knows when prices in cars and accessories will drop back to a level of a year ago, but some predict that this cannot be expected for several years. As a matter of fact, automobile, tire and accessory prices have not advanced, even in the proportion that farm and dairy products have advanced. Advance in farm products seems to have come first, and advances along the line of implement, automobiles, buggies, wagons, etc., and many other products is simply a readjustment to meet changed conditions all along the line.

Farmers of the state will not be especially interested in the freakish things in new cars. The farmer wants a car for work as much as pleasure. Most of his trips are a part of the day's business of the farm, and the automobile fits in as an ideal timesaver. It is also a price-cutter in the matter of transportation. When a car carries five persons the expense per person is reduced to a minimum. In fact, it is a cheap, as well as pleasant, means of travel.

The truck show at Milwaukee was the largest ever presented to a Wisconsin public. The truck is no longer a city proposition. The writer talked with one of the truck manufacturers who expects to market more than 50 per cent of his output this year to farmers. The truck is an evolution of the automobile business. First we looked upon the auto as a pleasure vehicle only. Then it became necessary at times in emergencies to use the family pleasure car for carrying purposes. The advantage from this use of motive power in a small way was so apparent that a vehicle for constant work use was welcomed with open arms by the larger farmers. It will not be long until a large part of our cream collection will be made with automobile trucks. This will permit more frequent collection, and will result in better cream at the factories, and hence in a better factory product. The truck is also ideal for delivery from truck farms. It is now in general use by farmers and gardeners who live near the large population centers. The manufacturers are designing bodies suitable for carrying cattle, hogs, hay, grain and other produce to market.

Changes in the actual working machinery of automobiles this year are slight. Engines have been so perfected that changes are not needed on many cars. We still have the four, six, eight and twelve-cylinder cars. The most radical changes apparent in the new cars apply to lines in the bodies. Several of the new cars have the shutter front on the radiator, making it possible to close up the front in cold weather. The shutter answers the same purpose as the hood cover. The straight windshield is being discarded by most makers for the tilted one. Several cars have improved the springs, especially under the tonneau seats, and a novelty is the adjustable front seat, which may be slipped backward or forward with a play of four to six inches, to accommodate the long or the short-legged driver. This is a convenience greatly appreciated where more than one person drives the car, or when a man and his wife both drive, as is now so frequently the case. The "clover-leaf" type of roadster will be much in evidence this year. The designers have accomplished some wonderful results on four-passenger roadsters. The sedan type for all-weather use is also very popular, and enclosed cars are being offered with a variety of upholstery to suit the most fastidious from the standpoint of either comfort or appearance.

It is difficult to get any accurate line of probable gasoline and oil prices for the coming summer season. Most dealers do not expect higher prices than last summer, though we may expect prices to advance some before the demands of the touring season. Users of cars are paying much more attention each year to the matter of lubrication, which has an effect on the life of the car, the smoothness of running and also the amount of gasoline consumed.

In handling chickens remember that it is the eggs laid in November, December, January and February that bring the high prices. It takes extra care and feed to get the eggs during this time, but it pays.

$7.50 Down *After* 30 Days' Free Trial

Only $7.50 if satisfied after trial—then a few monthly payments —and—

You Keep This Genuine Melotte

Write for catalog—it explains everything

Think of it!—Only $7.50 down on the world's greatest cream separator, the imported Belgian Melotte—the separator with the wonderful, self-balancing bowl. We are taking the lead. Let others follow if they will. Our catalog explains. We'll prove to you that the world's greatest Melotte will give you *more cream*, bigger profits and greater satisfaction. You have a right to insist upon the proof when *anybody* makes claims for his separator.

Not a Cent in Advance

Just ask for a 30 day free trial. Then we ship the Melotte. No salesman around to influence you. Use the machine according to every test you can think of. If you decide against it, all right—send it back *at our expense*. But—

If after 30 days you decide to keep the great Melotte you can do so on our rock bottom price offer—only $7.50 down after the thirty day trial, and thereafter just the same monthly payments. Send the coupon now for free catalog and full details of this offer.

Extra!

No Duty Now!

Save $15.25

The high tariff has been cut right off—the great Melotte comes in absolutely free of duty. Good for the American farmer! He gets the great Melotte Cream Separator now at an extra reduction of $15.25!

The high tariff and patent arrangements have kept the Melotte out of reach of the American farmer. Now this handicap is off. You can get the world's greatest separator now without this excessive duty charge—and on our rock-bottom, direct offer.

Wonderful Record

The Melotte has won more than 264 international prizes. At Brussels, Vienna, London, Paris, Amsterdam, Milan, St. Louis, etc.

One Melotte has been running at Remincourt, Belgium, the equivalent of 54 years of actual work without appreciable wear.

Here is *one* great reason for Melotte superiority: The bowl is *self-balancing*—it hangs down from a single bearing and spins like a top. Can't get out of balance. The Melotte turns so easily that the bowl spins for 30 minutes after you stop cranking unless you apply brake. No other separator requires a brake to stop the spinning. *The Melotte is guaranteed for 15 years.*

Repairs—

are hardly ever needed on the Melotte on account of its self-balancing bowl—no repairs compared with other separators.

BUT—We have on hand repair parts for 10 years ahead. That is the first thing we attended to, a huge stock of repairs when we introduced the Melotte in this country, and it has been a gratifying surprise that we are using hardly any of that stock.

Rock-Bottom Price

Highest-Grade Separator

WE offer you the Imported Belgian Melotte—the world's greatest cream separator—at the rock-bottom, before-the-war price: the same price charged in Belgium plus only $1.75 for water freight.

Seize this opportunity to get a highest grade separator on this astounding offer. You want a quality separator, one that you can be proud of all your life, one that will never bother you and that will always give you the maximum amount of cream without loss. So, we recommend to you the Imported Belgian Melotte—the separator with the wonderful self-balancing bowl that can not get out of balance and vibrate—especially now as we are making our rock-bottom offer. The Melotte is guaranteed for 15 years. Write now, *while this offer lasts.*

Try Them All!

All the Makes on the Market

HERE'S a frank open suggestion:—Have *every* manufacturer that is willing to give you a free trial, ship his separator to you. If he is not willing to give you a 30 day free trial, ask him *why* he won't—get his reason.

Set them all up side by side, the Melotte and all the others, and then make the test. Keep a record of the results. See which skims the closest—which gives you the most cream. Figure out, on this basis, which will bring you the most profit. Notice which machine is easiest to operate—which is the least tiring. Then notice the construction. Which will stand the most wear? Which is most substantial?

Then decide. Keep the one which has proved best. We are willing to abide by your judgement without a word. Remember the terms of our offer—if you want to return the Melotte, you may do so at our expense. We're only *too glad* to have such a test of all machines together; then when you've bought the Melotte you'll be all the more a "booster" for us.

Don't buy any separator until after you have tried it 30 Days Free on your own farm.

Send the coupon at once for our Melotte catalog and the valuable book on dairying—no obligations.

Valuable Book FREE

"Profitable Dairying." Send Coupon

The book is the work of B. H. Benkendorf, Wisconsin Dairy School Agricultural College, Madison, Wis., and K. L. Hatch, Winnebago County Agricultural School, Winneconne, Wis. 88 pages. Contains no advertising. A real, practical, commonsense treatise, telling everything about cows and dairying—how to feed and care for cattle—how to make more money out of your cows. Every farmer should have this book in his library. It is worth while getting now, even if you are not considering a cream separator at present. Sent free upon receipt of the coupon.

We'll send also our new Melotte catalog and details of our rock bottom, 30-day free trial, easy payment offer. Send the coupon now—while this offer lasts.

Montana Potato Yield Large

Mr. M. W. Woods of Lincoln, Nebraska writes, "I have just returned from Montana and find the crops there simply marvelous—potatoes running as high as 175 sacks to the acre and bringing $1.70 a sack. Alfalfa two years old, cutting four tons to the acre and bringing $16.00 a ton on side track at Piedmont. Other crops are in proportion."

This is not an isolated case—it is the rule, not the exception. Millions of acres that grow such crops can be bought reasonably cheap. Draw your savings and make a new start in Montana. It will pay you.

The whole state is pulsating with activity. A great achievement, and one that is to play an important part in the future development of Montana recently was staged there—the Electrification by the *"St. Paul Road"* of its main line across the state at a cost of over $12,000,000—an eloquent expression of faith in Montana's future.

Does Its Work for Little Money

WHEN buying an engine for any farm job you can't beat the **Mogul** engine for economy—no matter where you look or what price you pay. A **Mogul** gives you steady power at the lowest cost per day or per year of service—any way you figure it. It works on the cheapest engine fuel you can buy, common coal oil. It uses only just enough fuel to carry the load. It starts and runs on magneto—no batteries to buy or renew. Its oiler takes care of every bearing, and never forgets. It is as near automatic as an engine can be made and it handles all kinds of engine work.

The **Mogul** is made to **do its work** for little money—less than any cheap engine. Then, it will outlast two or three cheap engines. If you want steady reliable power at the lowest possible cost—and, of course, you do—buy a **Mogul** engine in any size from 1 to 50 H. P. If you don't know the local dealer who sells **Mogul** engines, write to us. We'll tell you where to find him and we'll send you our engine books.

Farmers' Open Forum

Noon Lunches at School.

To the Editor:—I was interested in your article on lunches in the schools, published December 21st, and thought you might like to publish also some recipes used in the Sauk county schools. These were printed in our last issue of Sauk County Schools, issued by our county superintendent, G. D. Davies. The recipes are as follows:

Thin White Sauce.—Two tablespoonfuls butter, one and one-half tablespoonfuls flour, one cup scalded milk, one-fourth teaspoonful salt. Few grains pepper. Melt butter in saucepan, add flour mixed with seasonings and stir until thoroughly blended. Pour on gradually the milk, stirring until well mixed.

Baked Bean Soup.—Three cups cold beans, three pints water, two slices onion, two stalks celery, one and one-half cups stewed and strained tomatoes, pepper, two tablespoons butter, two tablespoonfuls flour, one tablespoonful Chili sauce, salt. Put beans, water onion and celery in saucepan; bring to boiling point and simmer thirty minutes. Rub through a sieve add tomato and Chili sauce, season and bind with flour and butter cooked together.

Cream of Lima Bean Soup.—One cup dried Lima beans, three pints cold water, two slices onion, four slices carrot, one cup of cream or milk, four tablespoonfuls butter, two tablespoonfuls flour, one teaspoonful salt, one-half teaspoonful pepper. Soak beans overnight. In the morning drain and add cold water, cook until soft, and rub through a sieve, cut vegetables in small cubes and cook five minutes in half the butter; remove vegetables, add flour, salt and pepper and stir into boiling soup. Add cream, reheat, strain and add remaining butter.

Celery Soup.—Three cups celery (one-half-inch pieces) one pint boiling water, two and one-half cups milk, one slice onion, three tablespoonfuls butter, one-fourth cup flour, salt and pepper. Cook celery until soft and rub through sieve. Scald milk with onion, remove onion and make white sauce, add celery.

If any other readers have good recipes for school lunches, please send them in to The Wisconsin Farmer.

Subscriber.

Found April a Good Month to Plant Evergreens.

To the Editor:—Evergreens are something that but few farmers have on their places and, in fact, they give them but little thought. Most any kind of a tree, so that it will make shade, is set out in the yard in a haphazard way which does not improve the looks of the place, while an evergreen always looks nice and is an improvement.

When I was a boy I had a great deal of experience in setting out evergreens when I lived on another farm. I set them out in several different places and at different times of the year, but the most successful time was in the month of April. I never lost one set out at that time.

La Salle Co., Ill. Chas. Raudlett.

Law Questions.

Lights on Motor Vehicles.

A Subscriber, Royal, Wis.—Does the state law of Wisconsin require all vehicles on the public roads to carry headlights at night?

Answer.—It does not. It requires automobiles and other similar motor vehicles to carry headlights at night.

Clothing Exempt.

A Subscriber, Leola, S. D.—A, while working in Iowa, ran up a grocery bill at B's store. A went to South Dakota intending to return when threshing time was over, but did not return. He intends to pay B when he is able. B threatens to put an attachment on A's clothes in Iowa for the bill. Can B lawfully do this?

Answer.—The ordinary wearing apparel of a nonresident of Iowa and the trunks which contain the same are exempt and cannot be taken by attachment or execution for payment of his debts.

Collection of Note.

A Minnesota Subscriber.—A borrowed $100 from B and gave his note for the same payable in six months with 8 per cent interest. The note was due three years ago, and no part of it or the interest has been paid. The note has not been renewed, A has no property. Both parties live in Minnesota. What recourse has B against A, if any?

Answer.—The note is not outlawed. B can sue A and get judgment against him for the amount and then if A should acquire property the judgment might be collected, but if A remains insolvent it could not.

Do You Know What Sunshine Means To Your Pigs

Direct sunshine on the pen floors is absolutely necessary if you want to save Winter pigs. It kills germs--warms and dries the air--brings life, health, strength to pigs. It SAVES AND MAKES MONEY FOR YOU. CHIEF SUNSHINE HOG HOUSE WINDOWS are used by thousands of hog raisers--investigate.

FREE-- New Swine Record and 4 Blue Prints--Write for our gift--complete new system for Swine Records -- convenient, satisfactory. Also 4 PRACTICAL plans of most modern improved hog houses.

CHIEF SUNSHINE HOG HOUSE WINDOWS

The most valuable feature of modern hog house equipment. Roof windows that INSURE sunshine on the pigs in Winter. Most serviceable and satisfactory windows made -- recommended by veterinarians and thousands of practical hog men. Made of steel for PERMANENT service. Can't rot, rust or wear out. Cannot leak. Storm-proof. Never need repairs or paint. Outlast wooden windows 3 to 1--cost no more. Easy to install in old or new hog houses.

Cheesemakers at Fond du Lac.

Largest Convention of Cheesemakers in History of State—H. J. Kuschel, of Coleman, Has Highest Scoring Cheese on Exhibition.

NOT in the twenty-five years of their existence as an association have the Wisconsin cheesemakers had so successful a convention as the one held at Fond du Lac last week. Interest in proposed legislation, better prices for their product, scarcity of rennets and discussion of substitutes, location of next convention and the formation of a Wisconsin cheese advancement association were factors in bringing out the big crowd. There was a more representative delegation than this convention has had in years, due largely to the fight on location of the next meeting, Appleton, Milwaukee and Marshfield, the latter city backed by the Central Wisconsin Cheesemakers' Association, desiring it. The location of the convention has not been decided. The convention delegates, representing several district and county associations, formed a new association to be known as the Wisconsin Cheesemakers' Advancement Association. N. M. Scott, of Waldo, is president; W. A. Rausch, of Spencer, vice president; H. A. Chaplin, of Plymouth, secretary, and Mrs. L. C. Dix, of Auburndale, treasurer. The Cheesemakers through their state organization and through the new organization will make an effort to secure the passage of a state law fixing minimum moisture in cheddar and American cheese at 40 per cent. The exhibit of cheese was within two samples of being as large as that shown at Milwaukee last year. The following are the scores of cheese exhibited, only a few of the lowest-scoring exhibitors being omitted:

James Millorn, Richland Center, Wht. Twins, 97.1; C. Austin, Spring Green, Americas, 92.8; John Discher, Boaz, Americas, 93.3; Wm. Winder Richland Center, Cheddar, 96.1; Charles H. Good, Boaz, Twins, 95; Andrew Peterson, Lone Rock, Wht. Twins, 93.8; Emil Boeing, Woodstock, Wht. Cheddar, 93.6; Peter A Schmidt, Lone Rock, Americas, 95.6; Henry L. Wisconsin Legislature.

The Wisconsin legislature is in session, having heard Gov. E. L. Philipp's message last Thursday. There is a feeling that Wisconsin will not again be subjected to the long siege of legislative investigation which dragged along into the summer two years ago. The governor is in favor of a short session, but there is no telling what legislatures will do when they get down to an actual fighting basis.

The governor's recommendations include the following:

Extension of governor's term to four years.

Appointment of secretary of state, state treasurer and attorney-general by governor.

Legalizing of party conventions for the purpose of drafting platforms.

Pledging of candidates nominated at primary to party platform.

Permitting only adherents of party to vote its ticket at primary.

Restriction of public construction until war prices fall.

Investigation of social insurance and revision of workmen's compensation law.

Abolition of township assessors and appointment of county assessors by civil service.

Reassessment every four years instead of annually.

Building of system of trunk road with federal aid.

Requiring high school education of rural teachers after 1920.

Repeal of state fire fund law.

Referendum of the primary law to the people.

Give state superintendent of public instruction supervisional power over the educational division of penal institutions.

Broad-gauge plans for developing Upper Wisconsin.

Commends members of Wisconsin National Guard, and hopes to see measure in congress providing for shorter term of enlistment.

Additional conservational powers for the fish and game commission.

Revision of fire insurance laws.

These are in the main the chief points in the governor's message and they provide a foundation for legislative discussion. It is too early to predict what our solons may undertake especially for the benefit of the farmer, but we will give this attention in our columns from time to time. The governor's message, recommending the referendum of the primary law, instead of its abolition as the governor desired two years ago, the change to the short ballot, and other measures, is regarded as somewhat more progressive than some of the governor's former papers and speeches. The recommendations for a longer term for the governor and for the abbreviated ballot will require constitutional changes.

At Marshfield, Wisconsin, a little city of only 6,000 inhabitants, there was marketed $4,000,000 worth of cheese alone last year. Wisconsin sells $189,000,000 worth of what is known as American cheese annually.

Wisconsin pea-fed pork finds favor with the butcher and packer.

Rock Island "CTX" Plow

Rock Island Bonanza Disc Harrow

Rock Island Tractor Plow

Great Western Manure Spreader

Rock Island Corn Planter

Rock Island Perfection Cultivator

Great Western Separator

Rock Island Hinged Elevator Loader

The Farm Tools That Increase Farm Profits—Decrease Farm Toil

ROCK ISLAND farm tools are first in the esteem of farmers everywhere. They give you all the value—all the ease of operation—all the satisfaction—all the durability—resulting from 62 years of constant betterment by men of the widest experience—with all the facilities of our factories.

Rock Island Tractor Plows Give Better Results No Matter What Tractor You Use

You will have the advantage of the Rock Island's famous Front Furrow Wheel Lift with power obtained from the wheel running in the bottom of the furrow—*always on solid ground.* No chance of slipping. You will have the Rock Island's exceptionally High and Level Lift. Self leveling bottoms go in and out of ground point first. Greatest clearance. High Arched Beams clear themselves of trash. No clogging. Furnished with two, three or four bottoms.

Are You Thinking of Buying Any Kind of Farm Tool?

Then ask yourself these questions. Why *do* so many thousands of farmers declare the famous *Rock Island "CTX" Bottom* to be the greatest single feature ever placed on a plow? Why *do* so many thousands of farmers prefer the *Bonanza Disc Harrow*, which always discs the field at one uniform depth and angles from the *outer* instead of the *inner* ends? Why have over 125,000 farmers *insisted* on getting the *Great Western Manure Spreader*, the spreader with all four wheels *under* the load—the *Rock Island Hinged Elevator Hay Loader*, the first successful hinged elevator loader on the market, the loader that assists you to load wagon easier, quicker—the *Rock Island Perfection Cultivator*, the self-balancing, leverless, riding or walking cultivator—the *Great Western Cream Separator*, the closest skimmer and easiest to clean of all separators?

Rock Island Farm Tools

Get This Free Book—It Will Save You Money and Time and Work

It will post you on farm implement *values*. It will help you to select the farm tools you *need*—to cut down work on the farm, to assist in making perfect seed beds, to help in plowing, planting, cultivating, haying. The book is free. "We Can Cut Deep Without Killing the Team"

"I NOTICE the disks don't buck against the team like my old ones did," says one of our new customers in writing about his Janesville Harrow. "We can set them to cut deep without killing the team with the load."

This is because the bearings are set flat against the shaft. And they stay flat no matter how you angle the disks. They wear smoothly, hold their oil, and the team always has a straight-away pull. The only resistance is the cutting of the soil.

JANESVILLE and Budlong Disk Harrow

Manufacturers of Farm Implements

This is the original center bumper harrow. You can get it with steel or wood bearings. All of our bearings are interchangeable and we replace any of our chilled bearings proving defective within the life of the machine.

We can give you any size disk—concave plow cut, spading or cut-out. Notched disk and tandem disks for tractors. Steel harrows and oak bar harrows. Oak harrows made out of genuine oak.

Janesville disks dig right into the soil no matter how hard the ground is. It has extra clearance between top of blades and the weight boxes, and does not clog in marshy land.

This Book Free

We specialize in building a limited line of farm machines for the more efficient type of farmers. Send for our catalog. Our line includes Janesville Tractor and Horse Plows, Corn Planters, Cultivators, Harrows, Listers, Weeders or Seeders. Also cotton tools for Southern farmers. *Write us.*

Co-operative Cheese Marketing.

How Sheboygan County Cheese Producers Organized and Added to Their Profits--Sixteen Factories Now Market in This Economical Manner.

IN THESE days of soaring cheese prices many farmers who derive their principal income from the milk which they haul to Wisconsin factories to be made into cheese may lose sight of the benefits of co-operative marketing. The general tendency, when prices are good, is to let well enough alone—when poor to evolve some effective plan of marketing by which the farmer may secure the maximum price for his product and his labor.

WAREHOUSE AND COLD STORAGE PLANT OF THE SHEBOYGAN COUNTY CHEESE PRODUCERS' FEDERATION AT PLYMOUTH. COST ABOUT $25,000.

Although cheese prices are higher than ever before, all farmers are not sharing proportionately with the dealers in the increase in market prices. Where factories are offering their cheese, week by week, on the open market, the farmers are getting more for their milk than those who are patrons of factories that contract each spring for the summer "make." These contracts with dealers are made when prices are low and the entire situation revolves back to the need of co-operative marketing, such as has been worked out in Sheboygan county by the Sheboygan County Cheese Producers' Federation where the factories haul or ship their cheese each day and are paid according to the market quotations on that day. The federation then attends to the disposal of the cheese and its success during its three years of operation has earned for it the title, from the Wisconsin Board of Public Affairs, "a model of its kind."

MR. HENRY KRUMREY, President.

MR. R. B. MELVIN, Secretary-treasurer.

MR. J. B. McCREADY, Manager.

The Sheboygan county federation came into existence in the spring of 1912 as a protest against falling prices. Under the leadership of Mr. Henry Krumrey, a farmer of Plymouth, more than a thousand farmers were called together to devise some means to counteract the actions of the so-called "cheese trust." Mr. Krumrey declared that the dealers manipulated the Plymouth, Sheboygan, Appleton, Muscoda and Highlands boards in a way to stifle competition and force the farmer to take what he could get for his cheese. The rule then was to drop cheese prices to rock bottom in the spring when contracts were made for the summer output of the Wisconsin factories and then gradually increase them until the following spring when they would drop again. Mr. Krumrey figures that $400,000 went into the pockets of Plymouth dealers on the 1911 "make" in that county that should have gone to the farmers. He aroused farmers to action with the organization of this federation, now comprising forty-eight factories, or half the factories in Sheboygan county. Since then efforts have been made in other Wisconsin localities to organize such federations. These efforts will be renewed this winter and The Wisconsin Farmer has had so many requests concerning this organization that we are herewith presenting a story of its detailed organization and success since it began business in the city of Plymouth, April 1, 1914, with Mr. J. B. McCready as manager.

The plan, in brief, was to secure for the farmers who were patrons of the factories that belonged to the federation, the ruling market price for the cheese made from their milk. The system has worked well and these producers are no longer at the mercy of the cheese boards and there is no doubt but that the federation has broken to some extent, at least, the power once wielded by these boards. Mr. McCready, who left what has been termed the "cheese trust" to direct the destinies of this federation, told the writer that it was his honest opinion that cheese prices during 1915 would have averaged from 3 to 4 cents lower had it not been for this federation. Mr. McCready knows the inner workings of the board, as he says, "I once did my part in 'spiking' them." So the real services of this organization to the farmers of Wisconsin can only be surmised. To the members of the federation the service has been better prices for their cheese.

The federation is incorporated under the state laws with a capital stock of $500. The members are factories. The patrons of a factory meet, co-operate into a local association and vote to become a member. Though the leanings of the cheesemaker may be toward the dealers, he must ship to the federation. That was one obstacle the new organization had to overcome. It was to be expected the cheesemakers who had previously sold to dealers would be favorable to them. Under those conditions the farmer paid the cheesemaker 1¾ or 2 cents a pound for making; he sold the cheese and the farmer was paid accordingly. So far as the cheesemaker was concerned it mattered not to him whether prices were high or low—he got the same for making. This difficulty was soon overcome and a subsidary warehouse company was formed. It was necessary to store cheese; to operate a storage plant and about $25,000 was invested in this plant, a model of its kind. There are about 1,100 stockholders in the warehouse company and it guarantees 5 per cent dividends. In this way the federation handles the cheese, stores it, insures it and issues warehouse receipts which are good collateral at the banks. The cheesemaker still receives around 2 cents for making and then he ships to the federation all his product where it is paraffined, boxed and made ready for sale. Here the cheesemaker's duties end. The federation keeps check of the payments for milk and the farmers get their checks from the federation so that they can see at a glance that they are getting the maximum price.

There are many other advantages to the farmer, but none so important as the fact that he receives a price for his milk proportionate with the ruling market prices for the cheese and and he is not at the mercy of the cheese boards. There is also a saving in handling—the federation charging the factories an eight to a quarter of a cent against five-eighths by dealers.

The federation has sixteen factories which haul to it by wagon; the others ship by rail. Combining of cars absorb switching charges and reduce freight costs in car lots, as many factories are at the same stations and ship jointly. The charge for handling meets the running expenses and the cheese already sold but waiting shipment meets the 5 per cent dividend on the warehouse stock.

The federation is now completing its second complete year. During last year 7,558,796 pounds of cheese were handled for the factory members; cheese sales amounted to $1,132,867

and factories were paid $1,115,795. The undivided net income last year was $10,104 and the total operating cost $16,337. The operating expenses per 100 pounds of cheese handled was .0218.

Through this organization the farmer has the certainty that he is getting all for his product the market justifies. He does his own figuring, computes his own returns, keeps his own books and the books are always open for inspection. Such was not the case when the factory owner was doing this for him, regardless of his honesty and integrity.

News of the Sale Ring.

Washburn's Duroc Jersey Sale.

F. M. Washburn made a great sale of Duroc Jerseys at his farm near Lake Crystal, Minn. Breeders were present from several states to bid on sows bred to the great Chief Invincible. To show what the public think of this boar, we wish to say that thirty-two sows in the sale bred to him made an average of $124, while the average on the cataloged stuff was $109.90. The top of the sale was $375 for the Pathfinder yearling. She went to a buyer from South Dakota at that figure. It was a great sale in every respect and it demonstrated the fact that one cannot figure the value of a good sire by dollar and cents. Chief Invincible cost Mr. Washburn $1,000, he made that back in this one sale. We follow with a complete list. Col. H. S. Duncan officiated:

No. 1, Geo. A. Lee, Grand Forks, N. D., $375; 2, R. E. Steele, Fall City, Neb., $265; 3, C. P. Schultz, Mankato, Minn., $90; 4, Lester Flemming, Garden City, Minn., $80; 5, D. A. Williams, Lake Crystal, Minn., $85; 6, Lester Fleming, $135; 7, Lester Flemming, $110; 8, Manning & Desmond, St. James, Minn., $120; 9, W. E. Elliott, Amboy, Minn., $75; 10, H. E. Jones, Mankato, Minn., $67.50; 11, Crowley & Keyser, St. James, Minn., $100; 12, N. G. Burton, Storm Lake, Ia., $95; 13, Ernest Carlson, Washington, Ia., $75; 14, Geo. E. Brooks, Sparta, Wis., $90; 15, Fred M. Olson, Dover, Minn., $67.50; 16, F. Nicholson, Lynd, Minn., $175; 17, W. R. Winter, Wessington Spring, S. D., $115; 18, Lester Flemming, $102.50; 19, Geo. Pagel, Zumbrota, Minn., $120; 20, Fred M. Olson, $57.50; 21, Urbanside Farm, Waterloo, Iowa, $135; 22, R. W. Mein, Lake Crystal, Minn., $102.50; 23, Johnson Bros., Winnebago, Minn., $140; 24, Aug. Rethwill, Le Suere, Minn., $70; 25, C. E. Conklin, Garden City, Minn., $60; 26, C. E. Smith, Grafton, N. D., $195; 27, F. Fink, Albert Lea, Minn., $67.50; 28, Burk Bros., Welsh, Minn., $67.50; 29, John Swenson, Willmar, Minn., $67.50; 30, O. A. Farestad, Owatonna, Minn., $125; 31, R. J. Weiland, Canistota, Minn., $180; 32, Lester Flemming, $110; 33, O. C. Westphal, Gary, S. D., 34, O. C. Westphal, $85; 35, F. Christianson, Fairmont, Minn., $115; 36, Ogle Bros., Minnesota Lake, $87.50; 37, A. R. Crothers, Badger, S. D., $70; 38, E. Upgraff, Garden City, Minn. $62.50; 39, Keinholtz Bros., Amboy, Minn., $90; 40 Frank Truey, Amboy, Minn., $72.50; 41, Lester Flemming, $65; 42, M. E. Merfield & Son, Greene, Ia., $135; 43, Antone Johnson, Glenville, Minn. $87.50; 44, W. E. Elliot, $77.50; 45, Urbanside Farm, $165; 46, D. B. Smith, Mission Hill, S. D., $80; 47, Lester Flemming, $75. Summary: 47 head sold for $6,165.30; average, $109.90.

John Swenson's Duroc Sale.

The fourth sale of bred Duroc sows held by John Swenson, Willmar, Minn., was the "best ever." The day was ideal and the pavilion was crowded to overflowing by brother breeders that wanted to buy the blood of the great champions. It was a breeders' sale and the successful average of $71, show that the breeders appreciated Swenson's offering. The top of the sale was a two-year-old daughter of the champion, Big Wonder, a great sow, and s 'd to T. H. Hagen, of Minneapolis. Twenty-one head bred to the champion, E. J.'s Crimson Wonder, averaged $82. Geo. W. Pagel, Zumbrota, Minn., bought the second highest sow at $140. C. F. Johnson, North Branch, Minn., bought the top gilt at $105. The sale was a success from every angle and Mr. Swenson is to be congratulated on his ability to place such a high-class lot of sows before the public. His two grand champion boars and his son of Orion Cherry King made hits with the crowd. He certainly has three excellent herd boars. We follow with a list of those selling for $50 or over. Col. H. S. Duncan was on the block:

1, Mitchell Bros., Milbank, S. D., $107.50; 2, Manning & Desmond, St. James, Minn., $67.50; 3, P. J. Fosse, St. Cloud, Minn. $137.50; 4, Carl Berg, Clarkefield, Minn., $85; 5, Ben Bush, Morris, Minn., $60; 6, Olaf Gilbertson, Volin, S. D., $60; 7, John Rene, $100; 8, T. H. Hagan, Minneapolis, Minn., $200; 9, J. C. Murphy, Delano, Minn., $50; 10, Geo. V. Pagel, Zumbrota, Minn., $140; 11, L. P. Larson, Labolt, S. D., $80; 12, Art Anderson, Montivideo, Minn., $77.50; 13, Antone Johnson, Glenville, Minn., $102.50; 14, C. F. Johnson, North Branch, Minn., $105; 16, T. H. Hagen, $52.50; 17, T. H. Hagen, $100; 20, E. Reiter Altamont, S. D., $77.50; 21, John Traeger, Albany, Minn., $52.50; 22, Geo. Severeign, Milaca, Minn., $50; 23, J. M. Hosmer, Hitterdahle, Minn., $50; 26, Geo. Potter, Andover, S. D., $50; 28, J. C. Murphy, $50; 29, Freese Bros., Marshall, Minn., $60; 30, Volenze Bros., Browersville, Minn., $80; 32, P. J. Haley, Willmar Minn., $72.50; 33, A. Hoveland, Ortely, S. D., $72.50; 34, E. J. Hublon, Milbank, S. D., $52.50; 35, L. F. Atwater, Bangor, Wis., $62.50; 36, Dan Haley, Willmar, Minn., $52.50; 37, Manning & Desmond, $50; 38, J. J. Haley, $60; 39, J. A. Fey, Edgerton, Minn., $80; 40, P. J. Haley, $57.50; 41, J. A. Fey, $80; 42, J. M. Hosmer, $102.50; 43, A. Hublon, $97.50; 44, R. C. Slettea, Willmar, Minn., $55; 45, M. O. Vick, Clarkfield, Minn., $55; 46, P. J. Haley, $57.50; 47, Geo. D. Sprain & Sons, West Salem, Wis., $50; 48, Hilman & Traeber Albany, Minn., $65; 50, Ed Sommerville, Raymond, Minn., $50; 49, E .E. Ryder, Altamont, S. D., $52.50; 51, Joe Henderson, Cocato, Minn., $55; 52, P. J. Haley, $60; 53, Wendt & Painter, Canton, S. D., $105. 53 head brought $3,769.50; average, $71.12.

Johnson Bros.' Duroc Sale.

Johnson Bros., of Winnebago, Minn., made their second sale of bred Duroc sows at their farm with the satisfactory result of getting $4,812.50 on forty-three head. There was not room in the barn for the crowd, and they were there to buy hogs. The top went to John Swenson, Willmar, Minn., who has been topping most of the good sales lately. She was a daughter of Chief's Col. 40th and sold for $215. Several of the best sows were bred late, which had a serious effect on the outcome of the sale. Fancy Victor, the great Iowa herd boar recently added to this good herd, made a wonderful impression on the visiting breeders. He and Royal King should make a wonderful combination. The boys sold some wonderful animals, and had some of the better sows been bred for early farrow the other breeders would have had a high mark to shoot at. Col. N. G. Kraschel did the selling in his usual satisfactory manner. We follow with a complete list of the cataloged stuff:

No. 1, E. Bloom, Briceton, Minn., $180; 2, John Swenson, Willmar, Minn., $215; 3, H. H. Gestie, Frost, Minn., $85; 4, R. J. Weiland, Canistota, S. D., $190; 5, Geo E. Brooks, Sparta, Wis., $115; 6, E. A. Erdahl, Frost, Minn., $112.50; 7, B. C. Marts, Hampton, Ia., $155; 8, Paulson Bros., Fulda, Minn., $127.50; 9, Robt. Steele, Fall City, Neb., $117.50; 10, Manning & Desmond, St. James, Minn., $87.50; 11, F. D. Weyhusch, Blue Earth, Minn., $77.50; 12, L. F. Atwater, Bangor, Wis., $150; 13, C. W. Oak Lodge Holstein Sale.

THE dispersion sale of the Oak Lodge herd of Holsteins will be held at Elkhorn, Wis., January 30th. On that date thirty-eight cows and heifers and ten bulls will be sold. There are several cows in this herd that have made over 500 pounds of butter in six months and some of them have run over 900 pounds in one year. There are four daughters of the cow that made 936.64 pounds of butter in a year. The head of this herd, Beauty Walker Pietertje King, is a remarkably well-bred bull, as his seven nearest dams have an average of 28.72 pounds of butter in seven days. Catalogs for the sale are now ready and those who are interested in top-notch Holsteins should send for it and plan to attend. For catalogs write Harry D. Dunbar, Elkhorn, Wis., and please mention The Wisconsin Farmer when you write. See page 24.—Adv.

The Denver Short-horn Sale.

THERE will be 500 Short-horn bulls assembled at the Western Live Stock Show at Denver, January 20th-27th, affording an opportunity for ranchmen to make selections of their stock bulls. From the tops of this number will be selected sixty which will be offered at public sale at the sale pavilion on the show grounds, Friday, January 26th. These will represent the country's leading breeding herds and will enable breeders who are in quest of high-class sires to make their selections. The offering will be composed of strong, well-bred, well-marked, long yearlings and two year olds. The sale will be held under the auspices of the American Short-horn Breeders' Association and prospective buyers will be admitted free to the show on the day of the sale. This Short-horn auction is one of the features of the week. It will be remembered that the champion car lot at the Western Live Stock Show at Den er a year ago were Short-horns. There is a general inclination on the part of ranchmen to make use of Short-horn blood in order to maintain the size and quality of flesh. This sale offers the opportunity. See page 30.—Adv.

Watch For Grant County Advertisement Next Week.

THE Grant County Poland China Breeders will fire the first gun of the Southwestern Wisconsin Poland China circuit that starts February 13th, and we are glad to say that it will be some opening. When Dobson and Eastman, Frank Morehouse, Chas. Flesch and Frank Renalde offer the public the tops from their respective herds, you can rest assured that there will be "some show." These boys have the goods and if you will go to Lancaster on Tuesday, February 13th, your time and money will be well spent. They will show you spring gilts weighing right at 400 pounds and they are safe in pig to some of the best boars in the state. Breeders should attend this sale—this is a live association and it is for your own interest to attend. The following day E. W. Hendricks will sell forty head at Hazel Green, Wis. Good connection from the Lancaster sale. Notice the advertisement that appears next week in this publication.—Adv.

Buy the Good Ones.

NOTHING can be more convincing, that the good ones make money, than to follow a sale circuit and see how the buyers fight for the best. Most sale stuff is fed alike, yet some will sell for two and three times as much as others and it is generally because they come from better stock. The same conditions exist when you buy at private treaty—buy the good ones, it is so much cheaper in the long run. Just at this time J. D. McDonald is offering thirty-five gilts that he had reserved for his sale but since that has been called off they will be sold at private treaty. They are of March farrow and big. Their dams are the big brood sows that are the feature of the McDonald herd. Many of them are sired by Jim Crow and he is the sire of most of the gilts that Mac made the killing on at the fairs the past season. Some are by A Wonder 2d by A Wonder (Fes.) others by Crow's Progress a son of Great Progress the aged boar that recently sold for $700. There is one litter by Black Jumbo, one by Smooth Price and the lot has been bred to Jumbo's Giant in our estimation, the best boar pig shown at Minnesota last fall, purchased at that place by Mr. McDonald. The placing at Minnesota last fall in the pig classes were a joke and many thought this pig should have been first in class. Mc's Big Bone is a yearling that is good all over and if you could see him, you would want a sow bred to him. Several have been bred to Matchless Wonder, a boar good enough to win second at Iowa in 1915. McDonald has a wonderful lot of big, smooth Poland Chinas, the kind that are in demand and you will make no mistake in buying one or more at once. He also has fifty fall pigs if that is of interest to you. Four head from this herd have been consigned to the Madison sale—they are dandies. This herd will be nominated in the Poland China futurity and anyone buying a sow will be eligible to show the litter at Milwaukee next fall. Write J. D. McDonald, North Bend, Wis. and please mention The Wisconsin Farmer. See page 27.—Adv.

Farmers in Upper Wisconsin use their excellent forage to grow hogs.

Faultless Stump Puller

At a Special Low Price

The Faultless actually pulls from 50 to 100 percent more stumps at less cost of time and labor than any other stump puller. The cable winds onto the drum at the bottom all the time and the idle coils slide toward the top. This keeps the pull down and in a direct line with the anchor, and increases power. The machine cannot tip. Drum accommodates all of the cable, and it goes on only one layer deep. This prevents wear and relieves the strain on team and machine.

Machine and Cable are Guaranteed

against breakage for one year. Machines in use 15 years and longer are still in service.

Pull Stumps for 10 Days---Free

Clear from 10 to 50 acres. If not then satisfied that the Faultless Stump Puller will do more than we claim, return it to us at our expense.

The superiority of the Faultless is recognized by hundreds of farmers and railroads. It received highest awards at both the World's Fair at St. Louis and the Lewis & Clark Exposition at Portland in competitive demonstrations.

Write for special low price on our complete outfit, and our free book on clearing stump land.

Faultless Stump Puller Company, Dept. W, Cresco, Iowa.

Raise High Priced Wheat on Fertile Canadian Soil

Canada extends to you a hearty invitation to settle on her **FREE Homestead lands of 160 acres each** or secure some of the low priced lands in **Manitoba, Saskatchewan and Alberta.** This year **wheat is higher** but **Canadian land just as cheap,** so the opportunity is more attractive than ever. Canada wants you to help **feed the world** by tilling some of her fertile soil **—land similar to that** which during many years **has averaged 20 to 45 bushels of wheat to the acre.** Think of the **money you can make** with wheat around **$2 a bushel** and land so easy to get. Wonderful yields also of **Oats, Barley and Flax. Mixed farming** in Western Canada is **as profitable an industry as grain growing.**

The Government this year is asking farmers to put increased acreage into grain. Military service is not compulsory in Canada but there is a great demand for farm labor to replace the many young men who have volunteered for service. The climate is healthful and agreeable, railway facilities excellent, good schools and churches convenient. Write for literature as to reduced railway rates to Supt. of Immigration, Ottawa, Can., or to

GEO. A. HALL,
123 2d St., Milwaukee, Wis.
Canadian Government Agent.

Send for 36 page illustrated Northern Minnesota Bulletin. Tells about the wonderful opportunity—literally millions of fertile acres of virgin cut-over land waiting for cultivation. Watered by thousands of lakes; unexcelled for dairying, cattle and hog-raising. Wonderful crops of corn and clover. And the cost is small. Upwards of $25 per acre on easy payments.

WANTED Buyers who know a good thing when they see it. Ranches and farms for sale in the wheat and alfalfa growing valley of the Platte. Why pay high prices when better land can be purchased for less money?. Correspondence solicited and descriptions furnished. Address B. L. Neff, Lexington, Neb Office, First National Bank Building.

A SMALL farm in California will make you more money with less work. You will live longer and better. Delightful climate. Rich soil. Low prices. Easy terms. Sure profits. Hospitable neighbors. Good roads, schools, churches. Write for our San Joaquin Valley illus. folders, free. C. L. Seagraves, Ind. Com'r, A.T.& S.F.Ry., 1959 Ry. Ex., Chicago.

Two Farms For Rent

HAVE two farms for rent. Will sell one to right party with small down payment on long time. M. A. Peoples, Ladysmith, Wis.

TEXAS school land for sale by the state at $2 per acre; 5c per acre cash and balance in 40 years, at 3 per cent. Write Investor Pub. Co., Dept. 53, San Antonio, Texas.

Waste Land Is Too Expensive.

Non-Producing Land Must Be Taken Into Consideration in Purchasing Value of Any Piece of Farm Property.

EVERY acre of non-producing tillable land should be put to work or sold, says a new publication of the United States Department of Agriculture, Farmers' Bulletin 745. Many farmers would make more money if their business were larger, but the size of a farm, from a financial standpoint, is measured not by the number of acres embraced in it but by the number that are producing crops, pasturing animals economically, or supporting a growth of marketable forest products. Non-productive acres are loafer acres, and the money tied up in them is dead capital.

On every farm, however, there are certain areas necessarily devoted to non-productive purposes. Fences, ditches, lanes and building lots produce nothing themselves, but they are frequently essential to production on the rest of the farm. Nevertheless, they may occupy in the aggregate a considerable percentage of the available land. It is a part of efficient farm management to see to it that this percentage is no higher than necessary.

In this connection some interesting figures are given by the bulletin already mentioned in regard to the amount of land occupied by fences of different kinds. It takes, for instance, only 209 rods of untrimmed hedge and only 214 rods of zigzag rail or worm fence to waste an acre of what might be productive land. For the same expenditure of land one can run 459 rods of woven wire and 473 rods of barbed wire. Other considerations, of course, may make it desirable to use the hedge or the worm fence, but the waste involved is a factor that should not be overlooked.

Similarly, farm lanes often may be eliminated by a simple rearrangement of fields; headlands, or turning spaces at the edges of fields, avoided; and the farmstead itself, the group of farm buildings with their lots and yards, the garden and the orchard, made compact. In the case of the farmstead, however, considerations of health and attractiveness may well justify a slight sacrifice of economy.

While a little planning often will result in the saving of much land now devoted to these unproductive uses, a more difficult problem is presented by waste land—land that is rendered untillable by swamps, ravines, rocks, slopes, etc., woodland that produces nothing salable, and pastures that are too poor to be profitable. Some areas are, of course, hopeless, and in that case they should be left out of the reckoning altogether. Before this is done, however, it will pay to look into the possibilities of profitable reclamation. Many untillable fields, for example, may be turned into productive pastures, or if they will not grow enough grass to make this economical they can be used for the production of timber. On the other hand, it frequently happens that woodlots which yield nothing but a little firewood for home consumption are permitted to occupy valuable land. In deciding whether such lots should be cleared and tilled the cost of clearing, the increased value of the cleared land, the interest on the investment, the salable value of the timber products, and the added expense for firewood which will follow the disappearance of the timber must all be taken into account. With unwooded areas, the advisability of bringing them under the plow may be determined by comparing the probable cost with the market price of good arable land in the neighborhood.

Obviously, the higher the price of laid rises the more incentive there is for the farmer to avoid waste in the utilization of it. It is significant, however, that the investigations of the department of agriculture have shown that. irrespective of the price, tenants put a greater part of their land to productive use than owners. The tenant pays rent for each acre and he cannot afford to have any of them idle. On the other hand, the man who has no rent to pay may be able to get along on the produce of only a part of his farm, and he is, therefore, more likely to overlook the potential value of the part he wastes. By so doing he is, of course, throwing away opportunities to make money, but this is not always appreciated by those who have not grasped the important fact that the average farm is too small for maximum efficiency and that in the majority of cases to increase the size of the farm business is to increase the profits from it. Those owners, however, who, realizing this, are operating leased land in addition to their own, are, like tenants, careful to see that they pay for no loafer acres.

To anyone who is buying or leasing land, then, the important question is not "How much am I paying an acre for this tract?" but "How much am I paying for the acres that are going to work for me?" In the new bulletin it is calculated that a farm of 100 acres selling at $100 an acre will cost the purchaser actually $111.11 an acre if 90 per cent of it is productive and $200 an acre if only 50 per cent of it is. As a matter of fact, the percentage of improved land in farms east of the Mississippi is only 59.5 and west of that river only 50.8. Improved land, however, it should be noted, is not always the same as productive land. A good timber lot, for example, is not improved, but it may be highly productive and farm buildings and fences stand on land that is improved, but producing nothing. In the final analysis it is the amount of productive land that determines the earning capacity of a farm and that should, therefore, determine its price.

Money at 5 per cent for farmers throughout the United States is the ultimate aim of the federal government in the extension of rural credits under the National Farm Loan Act, James B. Morman, representing the federal loan board of the treasury department, told delegates to the fourth national conference on marketing and farm credits, in session in Chicago. Four per cent bonds, secured by the farm mortgage bearing 5 per cent interest will be the basis of the credit if the plan works out, he said. The extra 1 per cent, it was explained, is expected to meet the cost of operation. Dallas, Texas, banks, he said, already have offered to take $2,000,000 of the proposed bonds, which may be issued for the district including Texas. The proposed bonds, he added, would be issued in denominations ranging from $25 to $1,000.

A good, warm house must be provided for your fowls if you want to have success with them. You never saw a successful poultryman let his hens roost out in a tree or in the buggy shed. The henhouse should be warm, but well ventilated. Avoid drafts and all dampness, for these are fatal enemies of chickens.

Wisconsin has more dairy cows than any other state in the Union. Why not the same record for swine?

If You want to do THIS next Spring You'd better do THIS now

Batteries Need Care in Winter

Even if your car is laid up for the winter, the battery needs some attention.

It must be kept in a dry place—not too cold.

It must be kept filled with *pure* water, and tested regularly with a hydrometer to see that it is fully charged.

These and other valuable hints on battery care in winter are given in an interesting little booklet, H-1, "Will She Start In Cold Weather?" sent free on application to the Willard Storage Battery Company, Cleveland, Ohio.

If you need battery repairs ask your car dealer about the expert service given at over 850 Willard Service Stations. He can arrange for you to get this service.

And when you need a new battery—for even the best of batteries will wear out in time—remember that Willard quality has made it the choice of over four-fifths of all builders of electrically equipped cars.

How Many of Your Horses Earn Their Board?

IT takes *5 good acres* of your farm to support each horse. How many of them *earn their board?* Some horses are necessary, but a **La Crosse HAPPY FARMER Tractor** will replace from 6 to 8 horses on all field work—pulling two or three 14 in. plows, 7 in. deep; also for disking, drilling, and practically all work for which horse power is used. Sell your extra horses and use the land you have been donating to their support to produce more crops. Farm more acres for bigger profits with one or more

La Crosse HAPPY FARMER Tractors

Two Models—built with an unbeatable quality construction

Model "A" pulls two plows practically anywhere—weighs only 3,500 lbs. 88 per cent of this weight is on drive wheels. 1,500 lbs. guaranteed drawbar pull—16 h.p. on all belt work. Burns gasoline—or kerosene, with special attachment.

Model "B" is strictly a *Kerosene Burning Tractor.* Our own Twin-Cylinder Motor—Perfect Cooling System—Automatic Oiler—All gears steel cut and inclosed—every part easily accessible. One-piece unbreakable cast steel frame—Contracting clutch—*Hyatt roller bearings*—Universal hitch—Self-steering—Turns square corners, right or left. Write for catalog. **Live Dealer Agents Wanted.**

La Crosse Tractor Co. Dept. 17 **Minneapolis, Minn.**

We have a Distributor in your vicinity for prompt service.

Model "A" 8-16 H.P. $585.00

Model "B" 12-24 H.P. $735.00

Zero Outside Summer Within

IN thousands of happy homes, people are living in solid comfort because they own a Caloric Pipeless Furnace. This is the furnace that warms a house through ***one register.*** Entrance hall, living room, dining room, bathroom and all upstairs is just like toast, regardless of how the winds may howl outside.

There is but one register hole to be cut in the whole house, and of course no pipes to clutter the cellar and carry dust upstairs. The

PIPELESS CALORIC FURNACE

The Original Patented Pipeless Furnace

can be installed at any time without inconvenience. It saves 35% of fuel (abundantly proved by testimony) because its heat is direct and because a patented triple casing, without which no pipeless furnace can be a success, prevents radiation in any direction except up through the register.

Mr. John E. Drach, New Windsor, Md., writes this: "Our house has ten large rooms and is on a high hill. Two rooms are exposed to the north winds but the furnace heats them just the same as the other rooms." Hundreds of people write such letters--we've a book of them. Suppose you write Mr. Drach yourself, sending him a self-addressed, stamped envelope, and get his testimony direct.

There's a Caloric dealer in your town--see him soon. If you don't know who he is, write us and we'll tell you.

Let us send you our free booklet containing our remarkable guarantee.

Work of the County "Ag." School

Some Important Facts Concerning the County Extension Work Handled By the Dunn County Agricultural School.

WHAT is the function of the county agricultural school? In what ways may it be of direct interest to the farmers of its county as well as the boys and girls who attend?

These are probably now as important questions facing this branch of Wisconsin agricultural education as when these schools were first established some years ago. There is no doubt but that these schools are doing good work, but the question often brought up by the taxpayers is whether they are worth the expense. Like all new things, it takes some time to work out the details. With the county agricultural schools it takes time to fit them into the educational system of the state. So most of these schools in Wisconsin, in addition to the schoolroom and school farm work, have reached beyond the schoolroom in order to be of more usefulness and are carrying the gospel of better farming and better breeding to the farmers themselves.

In extension work few of the schools do more work than the Dunn county school at Menomonie. This school performs many of the functions of the county agricultural representative in addition to supplying four-year agricultural and academic courses. This extension work gives the parents some direct benefit from the school and has succeeded in tying the school a little more to the community than could probably otherwise be done. So when a Dunn county farmer has a problem to solve he has only to get in touch with the school faculty. If his boy or his girl wish an education along these lines the school is there affording the opportunity.

Mr. Theodore Sexauer, principal, who has served three years in this school, believes strongly in extension work. He does not favor this at the expense of school work, but surely the school that can be of benefit to the parent is going to stand high in his estimation when his son or daughter gets ready for an education that will fit them primarily for life in the country. So Mr. Sexauer is doing much along this line and from an enrollment of ten when he took charge the school has grown to an enrollment of eighty-one last year.

During the past summer Dunn county, quite important in swine, had an epidemic of hog cholera. Did the school sit by and watch it ravage the herds? No, the faculty members went at the call of every farmer, examined his herds, ordered the serum needed and vaccinated hogs free of labor cost. For days these men were kept working almost night and day, but the

DUNN COUNTY AGRICULTURAL SCHOOL WORKERS CARRYING THE GOSPEL OF BETTER FARMING INTO THE RURAL COMMUNITIES.

MR. SEXAUER'S BROWN SWISS COW, THANKS, WITH A RECORD OF 429 POUNDS OF FAT.

DUNN COUNTY BOYS AND GIRLS DOING WORK IN FARM CROPS.

epidemic was checked. If there is blight in the potato fields the school men are ready to advise; ready to help do the actual work of spraying. And so it has been in all lines.

Last winter the school arranged for county institutes throughout the country. One tour took in the northern half of the county, one the southern half and with a big bobsled these extension workers carried the gospel of better farming and better dairying to every community center. The results were splendid. It is probable similar tours will be made this winter. In the summer months picnics are arranged so that the farmers may be brought together to hear good addresses. The purpose is to get the farmers to thinking about better methods, to interest the dairyman in cow testing and such matters.

MR. SEXAUER'S BROWN SWISS CALF, WELCOME.

Unlike many of these schools the Dunn county school does not own its own farm. Experimental work to make practical the text-book work is carried on at the fair grounds and Mr. Sexauer owns a herd of eight dairy cows for the special benefit of the boys interested in this branch of farming. The course includes the usual studies in agriculture, grains, animal husbandry, etc. As an added attraction the school also maintains its own dormitories accommodating thirty boys and fifteen girls and the girls in the domestic science department can much of the food used there during the year. At the end of four years any boy or girl, with their credits, can enter any university or college.

A Success in Vilas County

To the Editor:—Just to show what we can do in Vilas county, I am sending you a small sample of corn from a ten-acre field that we raised this year. It was drilled in at sixteen inches and this corn shows the results Had we put it in hills we would have had at least eighty baskets to the acre. They say we are in the land of frosts, but we have a quick soil. This corn was planted on the 1st day of June and cut the 10th of September. We could have planted the 15th of May, as we had no frost after that date.

We have an abundance of vegetables all ripened; also small grain—

Corn raised in 1916 on A. E. Manning farm near Woodruff, Vilas county, Wis.

barley forty bushels per acre and oats thirty-three bushels, so you can see that Vilas county is not so slow. You must first remove the stumps to get this land, which means some hard work, but that you will find in all trades if you wish to succeed.

I am a steady reader of your most valuable paper and hope you will keep up the good work of showing the farmers what is in store for the ambitious young man if he cares to make a farm for himself. I have 240 acres with fifty acres all stumped and have been on the place four years. My sister, Mrs. E. A. DuBoice, and myself, after living there for over sixty years, sold our old homestead on Lake Butt des Morts in Winnebago county and are not sorry for making the change. I hope that others will see as we see things in this part of the state and locate on these cheap lands which cannot be beat in the state for farming.

Vilas Co., Wis. A. E. Manning.

THEY like Firestone Tires in New England. Where the successful tilling of the soil represents a constant struggle of scientific effort with unfavorable conditions, farmers appreciate the way Firestone methods hold out against road wear and tear.

New England is not easily convinced, but once for Firestone always for Firestone as long as Firestone standards continue. Your dealer and the nearest Firestone Branch unite to give you service.

Get My New Concrete Mixer Offer

I want ten men in every county right now to accept my special co-operative offer. It will help you obtain a Sheldon Batch Mixer at little or no cost. Let me tell you about it.

You probably need a mixer for concreting on your place—most farmers do. The Sheldon is the ideal mixer for the farm. Light and easily portable, durable, low-priced. You'll find it will prove a mighty good investment. Write for special offer.

Sheldon Batch Mixers $11.50 Up

MAKE BIG MONEY Concreting In Your Section.

You can easily earn $8 to $20 a day with a Sheldon Batch Mixer. Our customers are doing it right now. The jobs go to the man with a Sheldon Mixer every time. Saves labor of 1 to 4 men, according to size of job. Or, if you buy a machine for your own use, you can make many times its cost in a season by renting it to neighbors.

Improve Your Farm
Build your own silo, tanks, troughs, floors, foundations, buildings, etc., out of concrete with a Sheldon Batch Mixer. Will pay for itself on first small job. Beats hand mixing a mile. And it's a lot cheaper too. Takes the backache out of concrete. Makes possible those many small improvements on the farm that you wouldn't do without. Improvements which will add many dollars to the value of your land.

Get My FREE Catalog
Tells how to build your own mixer by using the *Free Plans* which we send with our iron parts. Also shows full line of built-up machines. Two styles, hand and power. Will mix 2 1-2 cu-ft. a minute. Keeps 1 to 6 men busy. Chain drive, self-tilting dump, all parts guaranteed. Write today for catalog and special offer. Geo. C. Sheldon, Pres.

High and Low Producers.

An impressive argument for good cows, good care and good feeding is very ably presented in a comparison of high and low producers which has been compiled from cow-testing association records in Wisconsin. The figures speak for themselves and we are giving them herewith:

HIGH PRODUCER.

9,182 pounds milk sold in 25 per cent cream 386.9 pounds of fat	$125.83
7,682 pounds skimmilk at 30 cents	23.05
Value of manure	19.90
Value of calf	15.00
Total receipts	$183.76
Cost of feed	$51.81
Depreciation	20.00
Interest on investment	7.50
Labor	20.00
Total expenses	$99.31
Net income	$84.45
Cost per 100 pounds milk	1.09
Cost per one pound fat	.257

POOR PRODUCER.

4,317 pounds milk sold in 20 per cent cream, 169.8 pounds fat	$55.40
3,467 pounds skim milk at 30 cents	10.40
Value of manure	12.15
Value of calf	2.00
Total receipts	$79.95
Cost of feed	$35.50
Depreciation	3.00
Interest	3.25
Labor	15.00
Total expenses	$56.75
Net income	$23.20
Cost per 100 pounds milk	1.31
Cost per one pound fat	.334

Although the dairymen with the good producer—a 386-pound cow, which is not without the reach of any man—spent considerably more for feed; his overhead charges were higher, etc.; he produced both milk and fat at a much less cost than the man who fed sparingly and had smaller overhead charges. This is an important subject for the dairyman. The cost of producing milk and fat is a big item—when this is accurately known, the market value of a quart of milk or a pound of butter fat can positively be ascertained. Too many farmers are content to know that the prices they receive are a little higher, paying no attention to the great item of cost of producing that product. For instance, in these two cases one farmer would be making money with fat at 30 cents a pound; the other would be losing. It is, therefore, important to keep down production costs, but this comparison shows that this is best done by keeping none but good producers and then feed and care for them well, so that they will have every incentive to remain good producers.

The dairyman who produced milk and fat at the lowest cost, it will be noted, spent $51.81 for feed against $35.50 for the poor producer. His profits from skim milk were also larger, as he skimmed a 25 per cent cream against 20 per cent for the other man and, therefore, kept more skim milk on the farm. Labor costs vary little, indicating that one cow demands almost as much as the other, while the difference in depreciation, due to age and interest, comes from a greater original investment. The entire comparison is a story of the best methods set alongside poor methods and a testimonial to good care, good feeding and the value of building up a herd of good producers, whether grade or pure bred.

Co-operation Among Dairymen.

Co-operation offers itself to dairymen as an ever present means of self help. Dairy co-operation is perennial in that it is with us every year. It is not perennial if we think of something that occurs only at stated seasons of the year. Co-operation is like some of the varieties of fruit of which some scientists dream. It is everbearing. It is unlike the fruit of the idealistic plant breeder because it actually exists and is a positive fact and its success is proven by instances without number.

Active practical co-operation is simple. It is teamwork applied with practical sense. Often it has an effect similar to that of hitching two horses to the load which enables the load to be moved without extraordinary effort, while were each horse to be hitched to the same load in turn it might be impossible to start it no matter how the good animals would struggle and strain. Teamwork has helped dairymen in hundreds of ways and by means too numerous to be listed here and it is not the purpose to do so.

All over our country are organizations of dairymen which have made a success of their effort from the start. Most readers are familiar with the work of some of those county or local clubs and know that their work is good. Each year sees them enlarging and taking on new enterprises. Each year sees the number of such clubs increasing and it sees new clubs everywhere. To the locality that feels that a club might advance the interests of its members there is nothing but encouragement. To the man who feels the call to start a movement to unite his fellow dairymen in some common cause for mutual benefit there is every reason to believe that he may be successful and that results of the future will justify his effort.

Dairymen and High Feed Prices.

This year is testing the nerve of dairymen. Prices of feed have risen to figures almost unheard of in the past. Farmers who have grown their feed are tempted to sell it for the cash that can be realized upon the market. Dairymen who make a practice of buying their grain are in doubt as to the advisability of spending the large amount of money necessary to procure the feed they have been using with a lavish hand. The interest in feeding problems this year is probably keener than ever before. This is a natural consequence of present high prices.

The man who has plenty of alfalfa or clover hay and silage this year is fortunate. With those feeds a satisfactory ration can be provided with a remarkable small amount of grain. Dairymen are thinking in terms of alfalfa and silage as never before. An extension worker in a state not far from Iowa has expressed himself as follows: "There never was such a good opportunity for us to talk alfalfa and silage with a hope of getting definite results." The high prices are no doubt temporary in the main. However, permanent good will result, because so many men will have been induced to grow alfalfa and to build silos. In a few years, when another period of high prices comes along, more men will be ready for it.

"Preparedness" seems to have been a slogan on many dairy farms as well as upon the political stump. Many dairymen scattered over the country have grain on hand which they purchased early in the season when prices began to soar. Bran, gluten feed

25 CENTS CALF RENNETS
We pay 25c each for salted rennets from milk-fed calves, if handled according to our directions. Little work to handle them. Write for directions. Address

Elmira, N. Y.

brewer's grains, cottonseed meal, oil meal and other feeds were secured in abundance at moderate figures. While bins may not be bulging with these feeds, the man who purchased a supply of them early is very fortunate. They are using this feed wisely and are feeding it according to the very best standards of requirement in the production of milk.

It is a very common belief among successful dairymen that some grain or concentrated feed is necessary. A judicious amount fed to a good cow has invariably made excellent returns. In all states and in practically every locality are men who have tried to winter their cows without grain. Their trials have been unsatisfactory to themselves and they do not plan to repeat their experience this year. They will feed their grain very carefully. Such feed as they purchase will be upon the protein basis almost entirely. From their standpoint that feed will be cheapest which furnishes protein at the lowest price per pound. Of course, the matter of palatability will not be overlooked. Neither will it be forgotten that some feeds may have an injurious effect when fed in large quantities. This is not a year to forego the use of grain to dairy cows. It is rather a year to use them carefully and judiciously.

The Dairyman and His Veterinarian.

The dairyman must patronize the veterinarian. He must do more than that, he must literally go into partnership with him. This does not mean that he is to divide his income fifty-fifty with his veterinarian. It means simply that each must have the most supreme respect and confidence in each other. The dairyman must not presume to have a greater technical knowledge and whenever he calls a veterinarian proceed to tell him the name of the ailment and how best to treat it. That is nonsense. He may with good judgment tell the veterinarian a clear history of the case as a basis for forming judgment later. Then he should leave it to the veterinarian to form his opinion and to prescribe to the best of his knowledge. It is folly for a dairyman to try to play the parasite and to obtain free advise by asking in a direct or a roundabout way for suggestions concerning proper treatment or handling of a case. No veterinarian who possesses the attributes of a human will prescribe under such conditions. No real man, and dairymen are men of the four-square type, will try to obtain professional services without settling in a business-like way for them.

The veterinarian in whom the dairyman puts his trust is a stockman at heart. He will have learned from first hand hard work on the farm many things concerning the nature of cows that could not possibly be taught in any school save the school of experience. He will have a wholesome respect for the business of his dairyman patron. He will be qualified to discuss feeding and other problems of the dairy. He will seek to advance the interests of his patron and will help him to operate his business upon a basis of preventing disease rather than allowing the animals to become ill and then prescribing for them. He will be a graduate of a veterinary college. No dairyman can afford to employ any veterinarian who has not obtained a knowledge of all that is best in the way of modern practice. The idea of employing a country veterinarian on full time appeals to dairymen. A veterinarian employed for full time and given assurance that his pay will come regularly will devote his time almost exclusively to the prevention of disease and to helping dairymen to provide sanitary conditions. Large stock farms and large dairies employ a veterinarian on full time. The country veterinarian will be available at all times for public projects and will be able to help every dairyman directly or indirectly. The employment of a country veterinarian is a progressive forward movement and is certain to be adopted. Once it is tried out thoroughly there is every reason to believe that it will spread.

COW TESTING REPORT.

Cows Making Better Records.

To the Editor:—The number of cows producing forty pounds of butter fat or over for thirty-day period is increasing rapidly in our association. For the month of December we had forty. The following is the number of cows each month which have made this record or better: April, thirty-six; May, forty; June, eighty; July, twenty-five; August, seventeen; September, nine; October, twelve; November, twenty-one; December, forty. The highest average herd production was 40.6 pounds of fat during December. This record was made by the M. R. Pritchett herd. The highest producing cow was owned by J. L. Chapman, her record being seventy pounds of fat. This cow was two years and six months old and has had two calves. She freshened the first time at the age of eighteen months. In her first lactation period she produced a little more than 360 pounds of butter fat. L. W. Ash, of our association has a herd of twenty-five cows with an average test of 6.07 per cent fat. From his twenty-five cows 729.4 pounds of fat was produced in thirty days.

The following table gives the names and records of cows in our association which have produced more than forty-five pounds of butter fat during the thirty-day period ending January 3, 1917:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat

COST What you put into a Cream Separator VALUE What you get out of your Cream Separator

It isn't the "out go" but the "income" that determines the real value of a Cream Separator

It's Cheaper to Buy a
DE LAVAL
CREAM SEPARATOR

VALUE depends upon the amount and the quality of service the article gives you—what you get out of it.

You get by far the greatest actual VALUE for your money when you buy a De Laval—BECAUSE it will give you much better and longer SERVICE than any other separator.

From the standpoint of its greater durability alone, the De Laval is the most economical cream separator to buy, and when you also take into consideration its cleaner skimming, easier running, greater capacity and less cost for repairs, the price of the "cheapest" machine on the market is most exorbitant compared with that of the De Laval.

And there is no reason why you should let its FIRST COST stand in the way either, because the De Laval may be purchased on such liberal terms that it will actually pay for itself out of its own savings.

You can't afford to wait until next spring. Let the De Laval start saving cream for you right now and it will earn its cost by spring. See the nearest De Laval agent at once, or, if you do not know him, write us direct for any desired information.

The De Laval Separator Co. 165 Broadway, New York 29 E. Madison St., Chicago

Are Your Cows a BURDEN?

Many cows are a constant drag on their owners when they could just as well be good producers—if properly handled.

Don't forget that your cows can get physically "off color" just as you sometimes do. Watch the milk yield; if it is going down without apparent reason, something is wrong with the cow. Overfeeding is likely to make the condition worse; she needs a medicine that will clear up and strengthen her organs of production.

Kow-Kure is making thousands of new friends among the best dairymen every year, because it supplies this great need. It is a cow *medicine*, pure and simple—not a food. It has great curative and tonic powers that immediately act upon the digestive and genital organs and enable the cow to thrive on her natural food. Kow-Kure has back of it twenty years of success in making backward cows profitable and in the prevention and cure of Abortion, Barrenness, Retained Afterbirth, Milk Fever, Scouring, Lost Appetite, Bunches and other common ills.

You can buy Kow-Kure from the best feed dealers and druggists. Sold in 50c. and $1.00 packages.

KOW-KURE

FREE BOOK
"The Home Cow Doctor"
This useful book that should be in every farmer's library is yours for the asking. It may be worth hundreds of dollars in a critical moment.

It will last 'till Doomsday

It cannot swell, shrink, fall down, blow down or wear out. Buy it now, and your great grandchildren will rise up and call you blessed.

B. V. T. SILO

The B. V. T. is built of glazed vitrified hollow tile made from the finest Brazil Fire-Clay. More lasting than granite. It's reinforced with steel rods that cannot rust, because they are bedded in cement.

The B. V. T. Silo is air-tight, sun-proof, frost-proof, wind-proof, and as nearly time-proof as a solid rock.

No Leaky Air-Joints

You know leaky joints mean spoiled ensilage. Eliminate this, and the silo will do perfect work. Notice the end-view of the B. V. T. See the double inside and outside walls, the triple dead-air-chambers.

Our book explains how this construction (found only in the B. V. T.) insures air-tight joints.

B.V.T. Silos are fully guaranteed. We assume all risk.

HORTICULTURE

Protect Young Trees.

A valued subscriber of this paper has an orchard of young trees near a piece of woodland and is a little nervous over the rabbit danger. We do not wonder at that, for the rabbit danger is real. As soon as the tender growths of summer, succulent plants and grasses are frost killed or snow covered bunny looks about for the next best thing to add to his bill of fare.

The bark of the young fruit tree is tender, tasty and easily reached, no matter how deep the snow, and when rabbits are plentiful and the season severe whole orchards of hundreds of trees are practically ruined.

As a rule, there is not much danger until snow comes, for the little beasts are only driven to the bark diet as a last resort.

Methods of protection divide into two general classes—washes and covers. Washes may be of blood or of various chemical mixtures. Some men take the liver or lungs of a freshly killed animal and rub it up and down on the tree. The smell of the blood and fresh meat is very offensive to the vegetarian enemy.

A mixture of slaked lime, sulphur and a little asafoetida is sometimes used with good results.

It is creditable to the good taste of Mr. Rabbit that he will starve to death rather than come near such a smell. This can be mixed up in a pail and applied with a paint brush and it is quite a speedy job. It remains in place very well, but in case of heavy, washing rains may need to be replaced during the winter. Perhaps the more common method of protection is by wrapping or covering and for this a great variety of materials is used. Perhaps the cheapest and handiest material is the common newspaper. One of the present-day Sunday dailies, will wrap a half dozen trees. And this is perhaps the best use it can be put to. Wrap two or three thicknesses around the tree. Tie at top, bottom and middle. Be sure that it comes close to the ground so that no injury can be done below it, and, if in doubt, mound up a little earth over the bottom of paper. Let it come up clear to the limbs. Another cheap protector is the cornstalk. Stand them up close about the tree and tie in place. If put on carefully they will do the business effectually.

If you want something more tony than these cheap materials the woven wire window screen makes an excellent protection and it has one advantage over all other wrappings. If put on loosely it need not be removed in summer. And it will last until rust weakens it so that bunny can poke his nose through.

One of the most commonly used protectors is the wooden veneer. This is put up and sold in large quantities and is not very expensive. It has to be tied and, like the cornstalks, should be removed in spring. Old cloths may be used, and one pair of overalls will be enough to wrap two trees.

Another device is to use twisted hay ropes, or long slough grass may be used precisely as cornstalks are.

Almost any man of ordinary originality can think of some method not commonly practiced which will do the work of keeping bunny's sharp teeth away.

Some of these methods should be tried where there is danger. Every fruit tree well set and cared for for two or three years is worth $5 and that is too much to lose for the lack of 10 cents' worth of time and materials.

The Care of Apples in Winter.

There are all kinds of apples, and even with long-keeping varieties you may set it down as a fact that you cannot keep them unless they are good and sound specimens. Fruit that is wormy or that has been bruised is already on the road to decay and you cannot stop it. All the imperfect fruit, the culls, should be disposed of early in the season. But if you must depend upon that grade of apples for your home supply there are just two courses open to you. You can the stuff or dry it.

The keeping quality of winter apples depends in a large measure upon the season and occasionally those which have the highest reputation will disappoint you. Of course, much depends upon how you try to keep them and something upon where they were grown, but we have known the reliable Ben Davis to be two-thirds rotten before Christmas. And that, of course, is outrageous.

But suppose you have a supply of good, sound apples, and of winter varieties, the problem is how to store them so that they may still be sound when March arrives. Temperature and moisture are two of the conditions which you must first consider. The air must be cool and moist. A dry atmosphere will cause them to shrivel and wilt and a warm one will produce rot. The ideal room would be a dark one with a stream of water running through it and a constant temperature of 35 to 40 degrees. But as the ideal is rarely attainable we must be satisfied to approach it as nearly as possible.

The temperature may be controlled fairly well by ventilation. Have a thermometer in your cellar and windows on opposite sides which you can easily open and close at pleasure. These should be opened each day long enough to secure the required coolness in the cellar. One must use judgment in this matter, for sometimes the outside air is too warm and the windows should be kept closed to keep it out. Moisture may be secured by keeping water in cellar in open vessels. A big washtub half full will give enough evaporation.

Spread out upon shelves so that ventilation is insured. Wrapping each apple in soft paper is a help. In all this moving of fruit it is of prime importance to handle carefully. Handle apples just as you would eggs, for just as sure as breaking the shell ruins the egg so bruising the skin spoils the apple. Rot develops a little slower in the apple, but it comes surely. The great numbers of people who buy apples by the barrel begin by sorting over the fruit and using up the spotted specimens first, the good fruit being put back in barrel more or less hastily. A week or two later another sorting is

REMODEL YOUR GRANARY INTO MODERN ELEVATOR PLANS FREE

Absolutely free to every farmer planning to enlarge or rebuild the old granary, a complete set of plans for building it into a modern elevator at a minimum cost. made and the bad ones taken out for immediate use. In this way the family continues eating the rotten apples all winter. A better way would be after the first sorting is made, not to put the fruit back in the barrel. Wrap each good apple in paper and put upon shelves and not one on top of another. By doing this there will be less rot and you will be privileged to use some good apples.

Scarcity of Vegetables.

A marked condition of the markets last fall was the great scarcity and consequent high price of garden vegetables. Cabbage, celery, onions, beets, carrots and parsnips have been considered staple products and there has been enough produced in past years—even in corn and hog sections—to supply local demands. But 1916 was the exception to the rule. The farmers who have these supplementary table products in store are very rare. And those who make market gardening a business had such short crops that they are entirely unable to supply customers. As a consequence retailers are calling upon the city markets to furnish the vegetables for use not only in the towns of the prairie states but for the farmers as well.

The natural result of this condition of trade is the highest prices ever known. With cabbage and onions selling at high prices, cultivators of the soil may well be asking themselves what can be done to prevent such scarcity in future. The reason given for the short crops is the unfavorable season. There was too much heat and a lack of rain at the time when rain was most sorely needed. But back of this was another reason which should be considered in the same connection.

The vegetables listed above are usually so easily grown that there is but little profit in their culture. In fact, it very often happens that cabbage and root crops are overproduced and sold at a loss. This fact leads to caution in growing them, in many cases to total abandonment. We may say that the markets are now bare because the limited space given to truck crops could not, in an unfavorable season, produce the required amount.

It should be understood that these crops were not a total failure, but in nearly all cases the yield was far below the average. Bear in mind that the shortage of vegetables disturbs the balance of the food markets. It leads to a greater consumption of the staples and that causes higher prices of flour and meats, where the prices are already too high. In fact, the continued failure of the vegetable crop (counting potatoes in the list) might develop such a weakness in our food supply system, with continued light crops of cereals, as to bring upon the country actual famine. We are near enough to it now and the character of the crop season of 1917, whether it is to be good or bad, will be watched with no little anxiety.

It is important that enough vegetables be produced to supply all demands, and farmers will grow them if they can be assured of an outlet for any likely surplus. If farmers would get in the way of using cabbage and root crops for feed to stock they would have an outlet for any surplus. On suitable and well-prepared land the yield is enormous and milk cows relish such an addition to their usual rations. Much might be said upon the point of proper soil. If it is rich, well drained and deeply plowed there will be no failure even in such seasons as the one just passed.

What we need to prevent another shortage of vegetables is more attention to their culture. Let farmers include these crops in their regular rotation. And let all who undertake the growing of vegetables give more thought and more time to the thorough preparation of the soil. This is the secret of success. If this is mastered there will be enormous crops in good years and half crops even in the seasons best represented by Pharaoh's lean kine.

Foodstuffs continue to leave American ports for Europe in vast quantities. Figures published by the bureau of foreign and domestic commerce show that, in the first eleven months of this year, they reached a value of about $670,000,000, or at the rate of more than $60,000,000 a month. Breadstuffs lead in value of foods sold abroad. In the eleven months they reached a total of $404,000,000. Meat and dairy products amounted to $245,000,000. Shipments of cattle, hogs and sheep fell off in the year.

Meat should be supplied to the hen during the winter, but if this is impossible skimmed milk makes a good substitute. Even when meat is fed milk should be given occasionally. It will do no harm.

Good, pure drinking water and plenty of it is just what the chickens need. Eggs are 75 per cent water, so the hens must have it.

Dependable Clover Seed

FOR a third of a century we have been specializing in Clover and constantly working to bring better seed within the reach of everyone. Steadily increasing sales prove that our Clover Seed is dependable and profitable to sow. It can be obtained from any of our 15,000 dealers.

You can identify this seed by the brands indicated below. Behind these brands are 33 years' experience in seed selection, recleaning and testing. Every bag of Clover Seed we send out is tagged, showing its purity and germination.

Can you afford to purchase unidentified seed of unknown quality when you can obtain standardized, tested seed under these brands?

Stop Hatching Weak Chicks

WITH CHEAP INCUBATORS

Remember, it is not how many you hatch that counts, but how many you raise. A Queen costs but little more, and the extra chicks that **live and grow** soon pay the difference.

Queen Chicks Live and Grow

Most of the chicks you lose in the first two weeks die because they did not have proper vitality or strength to start with. Queen Incubators are famous for big hatches of strong healthy chicks that live and grow. The American Poultry Journal wrote us: "During the many years you have been advertising Queen Incubators in our paper we have not, to the best of our recollection, received a single complaint from one of your customers." POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Selecting the Incubator.

A great deal of serious study has been given to the matter of incubation during the past few years, and a distinct advance has been made in methods, because of the better understanding of what is really required to produce a good hatch. The beginner, when selecting a machine, will do well to consider carefully the reports of actual operators of the incubators, to call upon neighboring poultry farms and get the testimony at first hand. Nowadays the choice of an incubator is not nearly so serious a matter as it was a number of years ago. There are quite a number of good ones, any one of which will yield good results if the directions are followed.

The size of the machine will depend upon the amount of hatching you intend to do. In small machines you get incubators that will hatch well that will cost very little, and if you want the very best you can get a machine well built, finely finished and fully guaranteed at a very reasonable price. An incubator with a capacity of fifty eggs is better than no incubator at all. It is wiser to get one of twice or three times the capacity. If larger things are contemplated, larger machines should be bought. It takes little more time and expense to run a machine of 150-egg capacity than to run a machine of one-third the size.

Send for the catalogs of the different incubator companies. Study the matter with much care, and pick out the machine as to size and kind that will best suit your purposes. Send for it promptly, study the directions most carefully and follow them to the letter. Take nothing for granted. Ability to follow instructions is a sign of a trained and acute mind.

The prospective purchaser of an incubator is, if without experience, greatly perplexed by the claims made for various types of machines. There are two general classes of incubators—hot air and hot water heat—each class having machines of the moisture and the nonmoisture type. The hot air heated machines are those in which fresh air is taken in at the lamp, over a metal radiator above the eggs, then over the eggs and out through variously arranged outlets. In some hot-air machines the heated air only passes over the radiator above the eggs, never entering the egg chamber.

The hot-water machines are heated by tanks or pipes above the egg trays in which water heated by the lamp circulates. Incubators of the radiator type, either hot air or hot water, obtain ventilation through special openings; the ventilation machines in which the heated air enters the egg chamber is through this heated current of air.

The question of whether a machine using moisture is better than one of the nonmoisture type is one that the buyer must decide; there are in use as many of one as of the other, and they give equally good results.

The questions of moisture and heating are really matters for personal solution. Experience has shown that incubators built to use moisture pans do not give good results when the pans are not used. Nor are nonmoisture machines improved by the use of moisture pans.

Aside from the instructions furnished with every incubator, a few things need to be specially emphasized. The machine should be looked after with strict regularity. It is not a hen that may be left a few days at a time. It is a machine that is dependent absolutely on your intelligence and your constant care. The lamp should be cleaned and filled and trimmed every day. The trimming of the lamp is of great importance. An old, charred wick in a dirty half-filled lamp is in great danger of spoiling the eggs.

The adjustment of the thermostat now and then is of vital importance.

The temperature is everything to the developing germs. It must be kept at an average of about 103 degrees or disappointment will be certain to follow. Of course, enough can be learned from the printed instructions concerning the turning and testing of the eggs.

Testing Parent Stock For White Diarrhea.

A successful poultryman, who ships eggs for hatching as well as supplying baby chicks, understands the importance of keeping untainted flocks. By attending the short course at the agricultural colleges he learned that white diarrhea may be transmitted to the offspring through the eggs from infected hens. At a cost of 5 cents each this enterprising poultryman has his flock tested by the state authorities and rejects all hens that are not up to requirements.

The test is made by an operator who brings as many sterile tubes as there are birds to be tested. These tubes are numbered to correspond with the legbands worn by the different birds. The bird is firmly held, a few feathers pulled from the under side of the wing between the second and third joints. With a sharp sterilized instrument, an incision is made, causing the blood to flow into the tube. A slight pressure on the wound and the blood almost immediately stops and soon clots over.

As soon as the report from the laboratory is complete all undesirables are culled out with the result that the disease has never got started. Now, this is science, and what have we but just common sense and that is all.

Improving the Farm Flock

It frequently happens that a man and his wife are not in perfect harmony on the poultry question. The wife whose work is with the chickens is interested in having a flock of which she may be proud, a uniform flock a little better than her neighbor's. The husband may object on the ground that he has no money to put into pure-bred poultry. He may even tell how his mother paid the grocery bill and clothed the family with a flock not as good as theirs.

To begin with, cull the flock carefully. Look at the rear of the bird first for signs of straining about the vent and bagging down, as with overfat, and reject all such birds, also any that have crooked breast bones. Choose birds with long breast bones. Along the keel is where the best meat lies. Examine the head also. Choose the birds with bright, round, alert eyes, the quick-moving ones, those that are always first at the feed hopper. Reject long-beaked, snake-headed birds, the ones with the dull eyes and those that sit on the roosts through the day.

When the flock has been culled as here suggested cull again, choosing six or eight of the best specimens of a uniform type for a breeding pen. Take the best of the old male birds and the same general type to mate with the hens and sell all the other males.

A breeding pen necessitates a separate run and house, but the house may be a large dry goods box. If a run is absolutely out of the question for lack of means to enclose it give the breeders and the laying hens range on alternate days, or for a time give the breeders only free range. Many a pen of fine birds has lost its usefulness as breeders because of being too closely confined during the breeding season. If from all the hens there are but one or two from which you care to breed furnish these with a house and yard and put the male with them for a few hours only each day.

If the male is put with the hens early in the morning it is said that the progeny will be mostly males. If he

be put with them in the afternoon or toward the evening the progeny will be mostly females. Also a mating of a cockerel with hens produces pullets and of pullets with cock birds produces cockerels. Some may doubt what is said in the above three sentences, but in our experience and observation we have found that things work out just about as stated. Small breeding pens give excellent opportunities for experiment and if a note book is kept the record of such mating makes most interesting and valuable reading.

Whatever else is done look for vigor and constitution in the birds. A hen that does not have a good constitution will never be a good egg producer. A male without a good constitution will never breed good egg producers. If a flock of mixed chickens lacks constitution they are practically worthless, a nuisance and an expense about the place. Some breeders of pure breds will sacrifice constitution to beauty of feather, fancy lacing, pure silvery white, rich deep buff, etc., but in the long run they lose by it.

Proper Ways of Feeding Poultry.

The practice of poultry feeding, while governed largely by circumstances, should as far as possible be confined to a regular routine. Regularity is one of the keynotes to success. The hens very soon learn when to expect their daily feed, and if they are disappointed the effect may be noticed in the egg basket. In addition, the poultry feeder should learn the characteristic needs of his flock and cater as much as possible to its desires. He should attend to his duties in a quiet manner, avoiding any action which might frighten the hens or cause them to become excited. He should also gain their confidence and make them feel that he is their friend. This can be easily done by displaying interest in their welfare. By occasionally feeding them some grain from the hand pets will soon be created, making the keeping of hens a little more interesting, and also influencing the egg yield.

In the morning grain should be fed—a small amount in the litter. This should be buried deep. Clean water should be provided. The grit and shell hopper should be kept filled. At noon the dry mash should be fed. At night more grain should be fed—enough so that no bird goes to roost hungry. Every bird should have a full crop when it goes to roost.

If the feeder has any doubt, a visit to the henhouse after the birds have gone to roost and an examination of the crops will indicate the correct amount has been fed. A hen eats approximately three to four ounces a day, or about six pounds a month. The amount fed each day varies with the appetite of the bird. There is no danger of overfeeding, providing the birds are compelled to take sufficient exercise. The aim in poultry feeding is to feed all that the bird can consume and yet be kept busy.

Approximately twice as much grain should be fed at night as in the morning. In the morning feed half a handful to each bird; at night double this amount. If the birds do not appear hungry at the next feeding too much has been fed. If they are unusually eager at the next feeding too little was fed at the last feeding. The amount also varies with the time of the year, more being eaten in the winter, especially if the birds are unable to get food from the yards upon which they run.

The success of egg production depends largely upon the activity of the bird. The reason the Leghorns excel in egg production is largely because they keep themselves in good physical condition. They exercise. The hen that is inactive and shows long toenails is seldom a good producer. The hen that is first off the roost in the morning, keeps busy during the day and is the last to go to roost at night is the profitable hen. Some birds have the disposition to take exercise, others have to be forced. This is especially true of the heavier breeds. Strains of Rocks and other breeds are inclined to be lazy and in a short time get so fat that they cannot produce eggs in satisfactory quantities. The circulation of blood in the ovary is restricted by the excessive fat. This unquestionably interferes with the normal functioning of the ovary and reduces egg production. Exercise can best be encouraged by not overfeeding. The skill of the poultry feeder is tested by the manner in which he compels the hens to exercise. Overfeeding causes inactivity, which will be manifested by no holes being dug in the straw. Egg production is quite largely dependent upon keeping the birds in condition.

A Few Poultry Experiences.

To the Editor:—As we have not seen anything about the Barred Plymouth Rocks for some time, we thought we would tell a few of our experiences, for there are always beginners who profit by the experiences of others.

When we were first married we cast about in our minds to see what line of poultry we cared to keep as a side line to farming. We at last decided to keep Barred Plymouth Rocks, not because we considered them the best of all breeds, for there is no "best," but because we considered them the best all-around fowl for us. Having decided on the breed, we purchased our eggs from an old breeder and started the poultry side of farming in earnest. We soon found there were ups and downs in poultry raising, especially the "ups."

Some of our neighbors have told us that they were going to get some other breed that would lay better, but to date our egg supply has far exceeded theirs and their birds are certainly a mixture of colors, while ours are a pride to us at least and when buyers come for cockerels we are not ashamed to show them ours. In fact, we have built a poultry house 12x30 feet facing the south, six double windows and two half ones. We use a "hennery" that will accommodate fifteen hens, also an incubator. We lay our poultry success largely to two things. One is the adding of new blood each year and the other is sticking to our chosen breed.

Clarence Heide.

Wisconsin Wins In Big Hatching Contests Every Year

Why Pay More

For only $10 you can get these two prize winning machines, delivered, freight paid east of the Rockies. You take no risk—money back if not satisfied. You can order direct from this ad. Ask the publisher about us.

FIFTY varieties chickens ducks, geese, turkeys guineas. Low prices to make room. Catalog free. Dell Walrath, Box S, Janesville, Minn.

THE HOME

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

House Plants.

There have been numerous requests for information on the care of house plants, the temperature of the rooms in which they are kept, the soil, when and how to water, time to repot, etc. Here is a little information that may be of interest.

Sunlight is necessary to produce the chemical reactions which transform the elements found in soil into available plant food. This plant food is taken up by the plant into the leaves in the form of a green-colored substance. When a plant has insufficient light the leaves will appear of a sickly, yellowish green color, and eventually the whole plant will become weak and spindly.

Air, not a draft of cold wind, but good, fresh air, and plenty of it, is necessary for plant growth. Plants are quite human in many ways. They must breathe and become refreshed like animals. Fortunately for us, plants also absorb the carbon dioxide gas, which is the waste material breathed out by human beings. In this way plants in the house are valuable, since they help to purify the air we breathe.

Soil—good soil, one that is composed of a rich sand loam; two parts orchard black dirt; three-fourths part sand; one-half sifted, well-rotted stable manure or leaf mold.

The man or woman who knows how to use the watering pot will be successful with plants. Plants at certain times need to have the dust syringed off the leaves, mostly from the upper side, occasionally from the under side, as we wash our faces to remove dirt and perspiration. Some few plants, like begonias, will not endure much water on the foliage. These should be wiped off carefully with a sponge or damp cloth.

The application of water to the soil is the most important practice in flower culture, gently on top, so as to overpack the soil, in ample quantity, when necessary, but not at all until it is necessary. The bottom of a flower pot should be covered with broken bits of crockery to insure good drainage. A cool temperature (60° to 70° F.) and watering heavily once a week is best. Plants like the morning sun and light, and the east window should be chosen for them if possible.

Blooming plants ought to be repotted each year; ferns and palms every three years, as a rule. The pot must not be too large for the plant if you wish it to bloom heavily. Crowding the roots slightly increases the top growth, flowers and foliage. This is called "forcing" a plant. It has a tendency to weaken the plant as a whole, and should not be permitted for any length of time. Keep the pot full of roots, but not so full that they show at the top or push through the hole at the bottom. Yellow leaves mean too much water; brown leaves mean drouth.

A little vegetable-cooking oil poured over the surface of the soil around plants in boxes or pots, or over soil before potting, will rid it of worms. Use a tablespoon to an eight-inch pot. Float it over the entire surface with a little water. At night worms will be suffocated by the oil and come to the top. They may be gathered and destroyed. After two days stir up the top soil, mixing in the oil.

Do not "fuss" with and handle plants too much. Like human beings, they do not want to be "nagged" all the time. On the other hand, they must not be neglected.

Plants Dried Up.

To the Editor:—I wish to ask a question which I would like to have answered by some of the readers of the Home page.

My house plants seem to dry up slowly. These are chrysanthemums, roses and yellow geraniums. They had buds in the early fall, but they died when they were almost large enough to break open. We have gas light and a hard-coal heater in the same room. Does this have any effect on them?

If anyone has had a like experience or knows how to prevent it I wish they would tell about it.

A Reader.

GIVE BOYS AND GIRLS AN INTEREST

WELL-DEVELOPED boys and girls are the biggest asset of any farm, and there is no better way to foster their proper mental and physical growth than by giving them a share and an interest in farm affairs. They need to be taught to think for themselves, decide questions for themselves, and study out for themselves whatever problems come into their daily lives. They need an active interest in something, and if that something can be their very own, so much the better.

The boy who has a calf or colt or pig of his own to watch and care for will develop faster, learn more and get bigger returns for the amount of energy expended than the boy who merely does the chores among father's stock. The girl who has a garden or a few chickens, the proceeds from which belong to her, will care for them better and will be drawn closer to farm life than she would if the work were done merely because it is there to do. While they are caring for their stock or chickens or little patch of ground their minds will be broadening and they will be molding into strong, sturdy, steady-going young men and women.

But one thing must not be forgotten. That is, when the time comes to sell the stock or the produce the young people, who have done the work, are entitled to the returns. It is no fun for son to own a calf and take care of it if father gets the money when it is sold, and daughter will not give good care to a second bunch of hens if mother buys groceries with the egg money. When they see the results of their efforts, and are allowed to enjoy it in their own way, they will be all the more anxious to try another time.

Give the young folks a share in the farm life. Let them learn the fundamentals of farming and stock raising and housekeeping by experimenting with their own stock and their own ground. Then they will know the value of every effort put forth—they will know whether the best results come from industry or from slip-shod methods—they will know along what lines their tastes and abilities lie so that when they actually start out for themselves they will need make no false moves. The boys will be getting a lot of fun out of their pigs and calves and the girls out of their chickens and gardens, and at the same time they will be learning some valuable lessons. We can well afford to let the boys and girls in on the business side of farming, even when they are small.

Cornstarch Beads.

To the Editor:—Someone asked a week or two ago how to make beads with cornstarch and salt, and I am writing to tell this reader how I make them. Mix three-fourths cupful of cornstarch with cold water to the consistency of cream. Dissolve one-half cupful salt in hot water, let it come to a boil, then add the cornstarch gradually, stirring constantly until well mixed. It should be thick when done. Be careful not to scorch. When cool enough to handle work with the hands until smooth. For black color with ink or with water colors for any desired color. Pinch off small pieces for beads and roll in the hands until round. If the mixture sticks use a little olive oil. When the beads are shaped drop on white paper and let remain an hour. Stick a pin through each bead and stick in pin cushion until the beads are solid. Leave on pin cushion six or seven days before stringing.

—H. T.

Twelve-year-old Margaret Lowry, of Mount Sterling, Ohio, raises pigs while other girls of her age "play house." From 628 contestants Margaret was announced as the prize pig raiser of the state by the agricultural extension department of Ohio State University. The contest was limited to members of the pig raising clubs formed under the direction of the extension department to promote interest in scientific farming among boys and girls of the state. Only seven other girls competed. Margaret had a good margin over her boy competitors. She raised two thoroughbreds at a cost of 3.76 cents a pound. "Pigs is pigs" doesn't go with this future stockwoman. She believes that pigs may be pigs and they may be better pigs. And she raises the better pigs.

Following are some suggestions for simple, effective, inexpensive trimming:

1. Rows of featherstitching between clusters of tiny, hand-run tucks.
2. Three rings interlaced, the middle one fagotted and the other two featherstitched.
3. Butterflies outlined with a double row of blanket stitch.
4. Hand-run tucks edged with a simple crocheted or tatted design.
5. Bands of narrow bias tape finished to the right side of the garment and featherstitched.

These touches are attractive on lingerie and children's clothing. They require only a few cents' worth of embroidery or crochet thread, and often transform an otherwise plain garment into a thing of beauty.

Recipes.

Nut Pudding.—One cupful bread crumbs, one cupful dates or figs chopped, one cupful milk, one cupful nut meats chopped, one cupful sugar, one egg, pinch of salt. Mix well. Bake thirty minutes. Serve with lemon sauce.

Lemon Sauce.—Wet two tablespoonfuls of cornstarch and one-half teaspoonful salt with four tablespoonfuls cold water. Pour on one cupful boiling water, stirring constantly till the sauce boils. Let boil five minutes. Cream together one-third cupful butter, two-thirds cupful sugar. Just before serving beat this into the hot sauce with a wire whisk, add lemon flavoring and serve.

Lamb Stew en Casserole.—Two pounds of lamb, one and one-half cupfuls diced potatoes, one cupful peas, one-fourth teaspoonful pepper, three-fourths cupful diced carrots, four quartered onions, one and one-half teaspoonfuls salt, flour. Cut meat into cubes, brown in spider. Put meat in casserole, add layer of flour. Add vegetables and sprinkle with flour, salt and pepper; add peas one-half hour before serving. Cover with boiling water and cook an hour and a half. To vary, add two tablespoonfuls catsup or one teaspoonful Worcestershire sauce ten minutes before serving.

Stuffed Cabbage.—Select a hard head of cabbage, cut away the outside leaves, then soak in salt water to dislodge any insects that may have been lurking within. Drain again and cool, put into ice water, then dry between folds of cloth, being careful not to destroy the shape of the head. Carefully scoop out the center of the head and fill with a forcemeat of ham and veal, a quarter of a pound of each pounded to a pulp. Season meat with salt, pepper, parsley, nutmeg, chipped green pepper and bind with the yolks of two eggs. Tie neatly in a cloth, cover with boiling water and cook until the liquid is reduced to a glaze. Remove the cabbage and stand in a hot serving dish. Serve cut in wedge-shaped pieces.

Cranberry Bavarian Cream.—Stew a quart of cranberries. While hot rub through a sieve; add a cupful of sugar. Soak a quarter of a box of gelatine in a quarter of a cup of water one hour, set over steam and dissolve the gelatine, then add it to the berries. Turn into a bowl, set in a pan of ice water and beat until cold and the mass begins to thicken, add a half a cup of rich milk and beat again, then add a half cupful of whipped cream, folded in. Turn into a mold, set on ice to chill. Serve with a few chopped almonds sprinkled over the top.

Lemon Raisin Pie.—Three eggs, one cupful sugar, one small cupful cream, one and one-half cupfuls seeded raisins, one lemon. Beat the yolks of the eggs, add the sugar, cream, the grated rind of the lemon, and then the juice of the lemon. Stir well while mixing in the lemon juice. Beat the whites of the eggs until stiff and fold in. Add the raisins. Have a pie crust ready and pour the mixture into it. Bake twenty minutes.

THE YOUNG FOLKS

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Letter Box From Alabama.

Dear Young Folks:—I want to join your circle. May I? I am eleven years old and am in the sixth grade at school.

A few weeks ago our school wrote letters to a school in Alabama. They sent us back a letter box. Besides the letters in the box there were some cotton balls, some sticks of sugar cane, some holly, some carnations and some pecans. They sent some Japanese persimmons, too, but they must have fallen out of the box, because there was a note that said they were sending the persimmons. There were two green cotton balls that we mistook for the persimmons.

I think Alice's story about why we celebrate Christmas was very nice.

—Oliver.

A Wonderful Pet Bantam.

Dear Young Folks:—When my sister was two years old she was given a bantam. It was a great pet and would eat out of our hands. She was a good mother and raised about three broods of chickens a summer. She always came in the house to lay in the wood box. In 1912 we went to California to spend the winter and we left the little bantam with grandma to take care of while we were gone. She was twelve and a half years old when she died this winter. She only weighed one and a half pounds when she died and and she never weighed over two pounds at her best. I would like to know if anyone can beat this.

—Mildred.

Enjoying the Fine Winter.

Dear Young Folks:—I am interested in your letter writing in the paper. I can hardly wait until it comes each week, for I love to read the letters.

I suppose all of you are glad we are having such fine winter weather, are you not? Indeed I am.

My father runs the livery barn, so I can have lots of sleigh rides. We had a week's vacation for Christmas and New Year's and we had lots of fun.

I am also interested in trying the recipes that some of the girls have been sending to our page and I wish they would send some more.

—Gladys.

[Editor's Note.—The Young Folks evidently enjoy the riddles that are published, but we want to suggest that in sending in their riddles they accompany them with the answer, as no riddles will be published if the answer is not given in the same letter. Also, we are afraid some of the boys and girls have been disappointed in not seeing their little stories in the paper. The stories we want, you know, should be original with you, and some of those which have been sent in we fear have been copied. Send us your own little stories, for we are sure that all the other readers will be most interested in them.]

Our Fashion Department.

All Patterns, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want, and inclose 10c for each number. We agree to fill all orders promptly and guarantee safe delivery.

1756—A smart skirt model. Pattern is cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It requires for a 26-inch size 3⅝ yards of 44-inch material.

International Sunday School Lesson.

(By E. O. SELLERS, Acting Director of Sunday School Course.)
Lesson for January 21, 1917.

First Disciple of the Lord Jesus.

LESSON TEXT—John 1:35-49.

GOLDEN TEXT—Jesus saith unto him, follow me.—John 1:43.

The words "I see" or "behold" occur fifteen times in this first chapter. John was a witness to the Son of Man. This term, "Son of Man," occurs eighty times in the gospel. The words "Come and see," or their equivalents, occur nine times in this lesson. This is a great invitation lesson. It would be interesting if the scholars would tell what the voices are which say, "Come," and those which are urging them to "stay" away from God. Bethabara was probably two miles from the fords of the Jordan, where John baptized. Jesus was thirty years old, just entering up his ministry. Tiberius Caesar was the emperor and Pontius Pilate the governor of Judea.

I. The Son of Man Attracts Men. (vv.35-39) not by his ethical teachings nor alone by his works and his character, but what he was and inspired in others attracted men to Jesus (John 10: 41). Crowds still gathered around the baptizer who "changed the hearts of men as by a spell." John, the Baptizer, brought terror to men. He broke through the crust of self-righteousness and indifference, and compelled men to see their need of forgiveness and of a new life, but the time had come when John must step aside and Jesus "to increase," to begin his ministry. Four successive days are noticed in this chapter. Andrew (v.40), and doubtless the apostle John, who wrote this account, were the two disciples (v. 35) to whom John, the Baptizer, speaks. It is interesting to note the different kinds of men who were attracted to Jesus; the aggressive Peter, the reflected Thomas, the practical Judas. He had what the souls of men needed, and they followed him. Aware of their questioning, Jesus turns to them with the question: "What think ye?" the first recorded words of his public ministry. This is a great testing question of every man's life. What is the aim and purpose of your life? Jesus, the kingdom of God, goodness, righteousness, usefulness or on the other hand selfishness, wordliness, success, ambition, money, pleasure? These disciples who had listened to this testimony of the baptizer, replied that they wanted to know where he dwelt, implying that they would like to talk with him and discuss the problems which were arising in their minds. Three steps of Christian experience are here suggested. These two disciples heard, they looked and they followed. Other steps must come shortly, but we must first look at Jesus as the Lamb, if we are to follow him as our example. We must believe what he has done (Rom. 3:25) before we can ask what would Jesus do or try to imitate him. It is by following that we demonstrate that we have really looked unto him and been saved.

II. The Son of Man Cares for His Own. (vv. 39-42). The instruction which they received from abiding with him impelled them, as we have already indicated, to go out and spread the good news. The greatest act in the life of Andrew was the bringing of his brother Peter to Jesus. Jesus changed Peter's name, and gave him a prophecy of his future life and career. He saw the possibilities within him, though it took much instruction, bitter experiences, prayer and long abiding with Jesus before he attained to those possibilities. It is this passage which gave rise to the organization of the Brotherhood of St. Andrew, which has adopted, first, the "Rule of Prayer," that of daily prayer for the spread of Christ's kingdom among young men; second, "The Rule of Service," to make an earnest effort each week to bring at least one young man within the hearing of the gospel of Jesus Christ. On the morrow Jesus would go forth to Galilee, that is to the East side, across the Jordan river, and on the way he found Philip. It was Philip who asked the question, "Show us the Father," and of whom the question was asked as to the resources sufficient to feed the hungering multitude (John 6:5). John, the Evangelist, alone tells us about Philip. Philip saw not only the resources of Jesus, but he saw a union of the law of the prophets (v. 45) in this Jesus, and, therefore, could and did invite his brother to Jesus.

Christianity would soon fill the earth if Christians would put forth the personal effort here suggested.

Nathaniel (v. 46) repeated a proverb of the country, "Can any good thing come out of Nazareth?" Philip's reply was: "Come and see," and to his amazement Jesus reveals not only his character, but his supernatural power; whereupon Nathaniel's reply was: "Thou art the Son of God, the King of Israel" (v. 49). Jesus, seeing his faith, promised that he should see still greater things (vv. 50, 51).

Everybody in this lesson who found Jesus seemed to go at once for someone else, and though some were sceptical, yet their scepticism ended, even as Nathaniel's, in following him.

Money-Back Guarantee

Send For FREE Catalog of HOOSIER Kitchen Cabinets

Save miles of steps—cut kitchen work in half.

Don't tramp! tramp! tramp! back and forth from cupboard, pantry, stove, cellar, table and sink—six times a day before and after meals.

That hard, exhausting kitchen work robs women of health and looks. STOP IT!

A million of your sisters have rebelled at such drudgery and now sit down restfully at the Hoosier when they prepare a meal. You, too, have a right to this lifetime kitchen helper.

Forty labor-saving inventions by domestic science experts make the HOOSIER the greatest time-saver, step-saver, and strength-saver ever built to cut down women's work.

No Other Has These Vital Features

The oval picture above shows the features that are most important. The storage space is above and below, *with places for 400 articles at your fingers' ends.*

There is plenty of unhampered room above and around the aluminum (or porcelain) work-table. The HOOSIER gives you a big table space to work on — it gives you 17 vital points not found in all other cabinets combined.

Get Our Freight-Paid Offer Easy Terms and Catalog

There is no excuse for buying an inferior cabinet. HOOSIERS are sold under the broadest guarantee ever given—*Your money all back if you are not delighted!*

Over a million are in daily use and prices are low because of enormous sales. Send a postal or the coupon for free catalog and full details today. No obligation —don't delay.

(Copyright Rand McNally & Co.)

PART IV--One Squaw Man.

CHAPTER II—Continued.

"Suppose you tell me something about the horses being run off," he suggested. "Oh, yes, I reckon I'm supposed to know all about it," he added; "but, just to pass the time, suppose you tell me your side of it."

There was not much to tell. Hardy's men had been riding around after stray stock until late; had passed camp after ten o'clock. About one in the morning the snow was falling thick; a little racket was heard in the long shed where the horses were tied, and the sentry, thinking some of Hardy's stray stock had wandered in there, tramped around with a light to see what was wrong. He had barely reached the end of the corral when someone from behind struck him over the head. In falling, his gun was discharged; and when investigations were made, it was found that nearly half the horses—about forty head—had been quietly run off through the snow, and the exploded gun was all that saved the rest.

The trail was hot, and pursuit began, but the thieves evidently knew the country, while the troops did not; and every moment lost in consultation and conjecture was gained by the people ahead, until the wind rose and the trail was buried in the snow.

The followers had only returned to camp a few minutes before Genesee was reported back; but the man surmised that if the troops did not get the horses, they were taking their pay out of the hides of the redskins.

"How's that?" demanded Genesee, with the quick, perplexed frown that was as much anxiety as displeasure.

"Well, a young cub of a Siwash came a-riding along to camp about noon, as large as life and independent as a hog on ice, and Denny Claflin—you know him; his horse was roped in by them last night—well, he called the buck to halt, as he'd a perfect right to do, and got no more notice than if the wind had whistled. Denny hates an Injun as the devil does holy water, and being naturally riled over last night, he called to halt, or he'd fire. Well, Mr. Siwash never turned his head, and Denny let him have it."

"Killed him?"

"Dead as a door nail. Right over the ridge north. Our boys were just coming in, after skirmishing for signs from last night. They heard the shot, and rode up; and then, almost before they saw them, some ambushed Injuns burst out on them like all-possessed. They'd come with the young one, who was sent ahead, you see. Well, there was a go-as-you-please fight, I guess, till our men got out from camp, and chased them so far they haven't showed up since. Some of us went out afoot to the ridge, and found the dead buck. We buried him up there, and have been keeping an eye open for the boys ever since."

"Did Captain Holt go?"

"You bet! and every other man that had a horse to go on; even that Mr. Stuart and Hardy from the ranch went."

"And they haven't showed up?"

"Naw."

No more questions were asked, and the guard betook himself to his pipe and enjoyment of the warm room, for intense cold had followed in the wake of the snow.

And the prisoner? The man on watch eyed dubiously the dark face as it lounged on the bunk. Aroused and refreshed by rest, he drifted away from the remembrance of his prison by living over with tender eyes the victory of the night before. Once he had seen it was possible for her to care for him—that once of a year ago, before she knew what he was; but lately—well, he thought her a plucky, cool-headed girl, who wouldn't go back on a friend, and her stanchness had shown that; but the very frank and outspoken showing had taken from him any hope of the warmer feeling that had existed in the old days, when she had likened him to a Launcelot in buckskin. The hope? His teeth set viciously as he thought of it as a hope. What right had he for such a wish? What right had he to let go of himself as he had done, and show her how his life was bound up in hers? What a hopeless tangle it was; and if she cared for him, it meant plainly enough that he was to repay her by communicating its hopelessness to her.

If she cared! In the prosaic light of day, he even attempted to tell himself that the victory of the night might have been in part a delusion; that she had pitied him and the passion she had raised, and so had stooped from the saddle. Might it not have been only that? His reason told him—perhaps; and then all the wild unreason in the man turned rebel, and the force of a tumultuous instinct arose and took possession of him—of her, for it gave her again into his arms, and the laws of people were as nothing. She was his by her own gift; the rest of the world was blotted out.

CHAPTER III.

"The Squaw Who Rides."

AT THE ranch a strange cloak of silence hung around the household in regard to the horse stealing. The men, hearing of the night raid, had endeavored to keep it from the women for fear of giving them uneasiness, but had not altogether succeeded. Jim had frustrated that attempt by forgetting, and blurting out at the dinner table something about Genesee's arrest.

"It isn't true; it can't be true!" and Rachel turned with such an appeal in her tired eyes that Andrews dropped his own.

"It's true, Miss; he's accused of knowin' all about it, even if he didn't help. It's supposed to be his Kootenai friends that did it, and they say he's mighty close-mouthed over it; that tells against him. I hope it ain't true, for he seemed a mighty good man; but he's under guard at the camp; won't allow folks to see him, I hear—leastwise, no Injuns."

Rachel glanced at the others, but found in their faces no strong partisanship for Genesee. Tillie and Fred were regretful, but not hopeful.

"It seems a shame that such a fine-looking fellow should be a squaw man," said the Major's daughter; "but since he is one, there is not much to be hoped of him, though papa did have a wonderful lot of faith in this one."

Rachel's eyes lightened at the words. "What day do they look for your father back?" she asked quickly.

"Today or tomorrow, though this snow may hinder them some."

"Well, he can't get here any too soon," chipped in the loquacious Jim. "I reckon they—"

Then his discourse was cut short by the toe of Andrews' boot under the table. Although the horse stealing was known at the ranch, and now the suspicion of Genesee, yet there was one thing that Andrews and Ivans had maneuvered to keep quiet, and that was the absence of Hardy and Stuart, and the fact that hostile Indians had descended from the hills.

Apocryphal stories had been told Tillie of an early supper her husband and guest had eaten at camp, and a ride they had taken after stock overlooked the night before; and the hours dragged on, the night came, and the two conspirators were gaining themselves the serious anxiety they had endeavored to shield the women from, and Jim, once outside the door, was threatened with instant annihilation if he let his tongue run so far ahead of his wit again.

The ladies had decided not to tell Rachel about Genesee—Tillie had so clear a remembrance of her stubborn friendliness for that outlaw; but Jim had settled the question of silence, and all the weariness dropped from her at thought of what that accusation meant to him—death. Once she got up with the strong light of hope in her eyes, and running across the

snow in the dark, opened the door of the stable where Jim was bedding the horses.

"Jim!" she called sharply; "when was it the stock was run off from camp—what time?"

"Early this mornin'," answered that youth sulkily. He had just received the emphatic warning against "tattling."

"This morning? What time this morning?"

"Oh, early; afore daylight."

Before daylight! She had gained a wild hope that it was during the time they were together; but from Jim's vague suggestion they had returned just about the time it had occurred—in time for it. She turned hopelessly toward the house, then hesitated and came back.

"Jim."

"Well?"

"Is Mowitza here?"

"Yes, can't you see?"

But she could not see very clearly. Something in her eyes blinded her as she thought of Mowitza and the glad days when they knew each other first; and of Mowitza's master, and his voice as she had heard it last—and the words! Oh, the despairing, exultant, compelling words! And then, after he had gone from her, could it be so?

"Take good care of the mare, Jim, until—until he needs her."

When the girl re-entered the house, Tillie turned with a lecture to deliver on the idiocy of going out without a wrap; it was not spoken, for a glance into Rachel's eyes told she had been crying—something so unusual as to awe the little woman into silence, and perplex her mightily. Headstrong as the girl had been in her championship of Genesee, Tillie had always been very sure that the cause was mainly Rachel's contrariness; and to associate him with the tears never entered her mind.

The evening wore on, and about the fire there were conjectures about the protracted stay of Hardy and Stuart, and wonderment from Fred that not a man had called from the camp all day and evening. Rachel sat silent, thinking—thinking, and finding a glimmer of hope in the thought that Major Dreyer would soon be back; there, she felt, would be no prejudicial mind come to judgment.

At last they were startled by the sound of a step on the porch, and all looked around, glad of the return of the two wanderers, when the door opened, and there entered Kalitan—a very tired-looking Arrow, and with something in his face that was more than fatigue—anxiety.

"Rashell Hardy?" he said, and deliberately walked into the other room, intimating that she was to follow and the interview to be private—an interview conducted in low tones and in Chinook, after which Rachel asked Aunty Luce to give him some supper; for he was very tired, and would not go on to camp until morning.

The night before had been one of wakefulness, because of Rachel's absence, and all were sleepy enough to hunt beds early; and leaving a lunch on the table for the absent ones, the hearth was soon deserted—Ivans and Andrews, however, agreeing to sleep with one eye open.

Both must have closed unawares, or else the moccasined feet that stole out in the darkness must have been very, very light, and the other figure beside him very stealthy; for no alarm was given, no ear took note. It was late, past eleven o'clock, when the sentry challenged a horse and rider coming as briskly and nonchalantly into camp as if it had been eleven in the morning, and occasioning as much astonishment as had Genesee, when it was seen to be Miss Hardy.

"Rather late to be out alone, Miss, ain't it?" asked the sentry, as she stopped to chat with him of the continued absence of the men.

"Is it?" she laughed. "I don't know what you call late over here; but I suppose we of the ranch would be considered night owls. I rode over with some mail that came late, and thought I'd hear if there was any news before we went to bed. Who's in command?"

"Lieutenant Kennedy; but he turned in an hour ago."

(To be continued.)

Wisconsin's agricultural system is founded upon diversified cropping and live stock farming.

Peerless FENCE
WITHOUT A RIVAL

"This Is My Hobby,"
says wise, old
Col. Experience

"Yes, Sir! For years wire fencing has been my hobby. I've carefully investigated every kind there is, and season after season I've watched my neighbors put up new wire fencing of one sort or another. And, my friend, I'll tell you this: The more I study and observe, the more convinced I am that my good judgment is on the right track when it says to me: The only really good fence at a reasonable price is

PEERLESS FENCE,

the Fence that stays put and lasts indefinitely."

Why Peerless is Best

Costs less per rod than any other equally high grade fence.

Made of very heavy gauge open hearth steel wire that gives unmatched strength and stay-there qualities.

Special galvanizing by a secret process that resists rust indefinitely.

The famous "Peerless Tie" holds every wire in place regardless of the strain. Peerless stays put.

The Peerless one-piece cross-bar prevents animals pushing the fence down from the top or up at the bottom; it never sags.

There is probably at least one store in your town where Peerless Fencing for every farm purpose is sold, as well as the popular Peerless Self-Raising Gate and Peerless Lawn Fence. But if there should be no dealer convenient, write for our big, free, interesting Fence Book; generous samples included.

The advice of Col. Experience is good advice. For there are many common-sense reasons why Peerless Fencing gives more fence-value and fence-satisfaction, at a minimum cost, than any other made.

The Peerless Self-Raising Gate

IS one of the best selling styles in our entire line. It is no longer necessary to lug around the old-fashioned sagging, dragging, heavy gates. The Peerless lifts automatically and swings over all obstructions, snow, ice, grass, and rubbish.

In addition to being self-raising, it is extra heavy in both frame and filling. Big, massive frames of 1⅝-inch tubing and close woven all No. 9 wire, close mesh filling, insures long life.

Every part heavily electro-galvanized—no paint to wash or wear off in a year or two.

PEERLESS WIRE FENCE CO., 216 Michigan St., ADRIAN, MICH.

American Fence

Woven with a mechanically hinged joint. Big, full gauge wires—full weight—full length rolls. Superior quality galvanizing—proof against hardest weather conditions.

American Steel Fence Posts last a lifetime. Hold fence secure against all conditions.

Don't Forget the Atwater Sale.

IF YOU miss the L. F. Atwater Duroc Jersey sale at Bangor, Wis., Wednesday, January 31st, you'll miss a treat, for the best lot of this breed ever sold in Wisconsin will go through the sale ring on the above date. The boars in service and to which the offering has been bred are, Proud Chief Jr. a son of Cherry Chief out of a Proud Col. dam. This is the "under-year" boar that Atwater showed so successfully last fall. He was junior champion at the Minnesota and Wisconsin State Fairs, and is a great prospect for a senior yearling next fall. P. S. Wonder is a full brother to Marion's Wonder, the greatest breeding boar ever in the state of Wisconsin. Sired by Crimson Wonder Again and out of H. A.'s Queen. This boar died the latter part of December, so this is your last chance to get some of this good breeding. Model King is the sire of some of the best gilts in the sale. He is a son of High Model and out of a King the Col. sow. Daughters of Lee's Defender have been bred to him. Don't forget about the grand champion sow that sells in the sale. There is an outstanding litter out of a daughter of old Marion's Wonder. Some show prospects can be found in this litter. There are also three full sisters to the grand champion sow in the sale. There are four choice gilts out of a full sister to the champion sow. But there are too many good ones to try to mention each one individually. There are three features that we want especially to call your attention to. First is the extreme size, combined with quality, second is the high, arched backs, not a poor back in the offering, third, the good feet and pasterns, not a sow in the sale has poor feet. If you are progressive and take pride in owning good Durocs, you'll sell some of the common sows you have and buy one or two real good ones. It costs less to keep them and the profits derived are greater. One of the best places to buy is at Atwaters. Arrange now to attend the sale. If it is absolutely impossible to attend, be represented. Mail bids should be sent to T. P. Shreve in care of L. F. Atwater. If you haven't received your catalog, write for same at once and please mention The Wisconsin Farmer. Don't forget the Shea sale at Melvina on the 30th and Willsie at Prosper, Minn., on the 2d. See page 28.—Adv.

The Madison Sale of Durocs.

THOSE attending "Swine Week" at Madison, Wisconsin, will have a treat when they see the bunch of Duroc Jersey sows that will be driven into the sale ring of the sheep pavilion at the University Farm at one o'clock on Wednesday, February 7th. It has been our pleasure to see several of the sows and gilts that have been consigned to this sale, and we are glad to say that a few of the best sows to be found in the state have been listed for this sale. Sows that carry the blood of the most noted boars of the Duroc breed—daughters of boars and sows that have been winners in the big shows. Many of the gilts are good enough, if properly cared for, to go out and make a creditable showing next year. The Duroc Jersey predominates in many states and it is because there is a live bunch back of this breed. It is up to the breeders of Wisconsin whether they want to push their chosen breed to the front or not. Your attendance and assistance at this sale will show a tendency on your part to boost your chosen breed. The outcome of the two sales which will be held on the 7th, Poland Chinas and Duroc Jerseys, will depend on the breeders of the state and the breed that puts up the best offering and displays the most "pep" will make a strike for the future of the breed in Wisconsin. The Duroc Jersey offering is good and is deserving of the support of all farmers that favor this good breed. It is useless to try to describe the offering in detail for there are too many individual consignors. If you are interested you will write for a catalog and attend the "Swine Week" and incidentally the sale of Durocs. The catalogs are now ready and by writing to J. D. Gant, Secretary, Delavan, Wisconsin, you can get one. When writing please mention The Wisconsin Farmer. Tell your friends to meet you at Madison, Swine Week. See page 26.—Adv.

Don't Overlook the Sale at West Union, Iowa.

REMEMBER the Grimes Bros.-Krueger Duroc Jersey sow sale at West Union, Iowa on Monday, January 29th. They sell forty head on that date and the offering will please even the most critical. Eighteen gilts in the sale are sired by Col. the King, a very good son of King the Col. There is a yearling sired by the champion, High Model, that is outstanding in every respect, and she is bred for an early March litter to a son of the second-prize yearling boar at the National Swine Show. There will be one gilt by Col. K., a noted Iowa boar by King the Col. She is safe in pig to a son of the great boar, Chief Invincible. The dam of this gilt was the first-prize aged sow at Iowa in 1913 and she is a wonderful sow today. Two gilts are sired by Col. Taxpayer, he by Pal's Col., and out of the High Model sow mentioned above. Two gilts sired by John's Orion Again should be attractions for those that appreciate the most popular eastern breeding. Two gilts out of a Col. Gano dam are about as good as anything in the sale. The dams of many of the good yearlings and gilts are sired by Crimson Wonder Again and as you know that is standard breeding. We told you last week what this offering has been bred to. Grimes Bros. live at West Union and W. G. Krueger is at Hawkeye, the sale will be held in a heated building at West Union, where there is good train service and everything possible will be done for your comfort. Try to attend this sale—sows and gilts will be sold that you should have in your herd. The day following, Dennis Shea sells at Melvina, Wis., and those attending the West Union sale can make good connections for Melvina. The next day, Atwater will sell at Bangor. Friday of that week, Geo. Willsie will sell at Prosper, Minn. Arrange to attend all sales. Write at once for a catalog and please mention The Wisconsin Farmer. Send buying orders to T. P. Shreve. See page 28.—Adv.

Poland China Men—Attention.

IF YOU are interested in better swine, you'll be in Madison, Wisconsin, during "Swine Week"—if you are interested in Poland Chinas, you'll attend the sale of this breed which will take place in the evening at the University Farm, Wednesday, February 7th. At the present time the Poland Chinas lead in the state of Wisconsin and there is no reason why this great breed should not be a leader if those "behind the gun" will get together and push. Another breed has forged to the front in several of the states simply because there was not enough co-operation among the men breeding Poland Chinas. Do not let this happen in Wisconsin—it is up to you. If you attend this sale and boost the game you are in, you will be doing something. You should have a sow or two in the sale, if you have them good enough; if you haven't, there is all the more reason you should attend and buy a few of the good ones so you will have Poland Chinas in a few years that you will not be ashamed of. This is the opportune time to get good seed stock. We can see no reason why pork products will not be high for some time to come. At the present time there is no surplus of hogs, if there was the packers would not continue to pay what they are for hogs. Europe is our heaviest buyer of pork products—she is drawing heavily on us now and when the war is over there will be a still greater demand. There is more pork going into cold storage now than ever before—there is a reason. Is the farmer and breeder preparing as he should? Buy one or two of the good gilts or sows that will be sold in this sale, even if you have to sell four or five of your scrubs to do this. In a year from now you'll be glad you made the change besides the satisfaction you will get out of it. Owing to the many consignors, it is impossible for us to tell the breeding, etc., of the sows that will go into this sale. We will say, however, that we have seen some twenty head that are listed and if the remaining thirty are as good, it will be the greatest lot of Poland Chinas ever seen in a sale in Wisconsin. You can find any blood lines that you want. Bred to boars of the most popular breeding. The Duroc Jersey association will hold their sale in the afternoon and the Poland Chinas will be sold in the evening. Attend both sales if possible and boost the swine industry in Wisconsin. Remember the date and place and if you want a catalog, write to J. F. Diley, Secretary, Rush Lake, Wisconsin. Please mention The Wisconsin Farmer. See page 27.—Adv.

Last Call For Shea's Duroc Sow Sale.

REMEMBER that on Tuesday, January 30th, Dennis Shea sells thirty-five spring gilts and fall yearlings at his farm, which adjoins Melvina, Wis., twelve miles south of Sparta on the Sparta-Viroqua branch of the C., M. & St. P. Those coming from a distance should get to Sparta Monday night. One can get to Sparta from most any direction, for the Northwestern and Milwaukee both run in there. Leave Sparta Wednesday morning for the sale, twelve miles distant, and return to Sparta that night and leave Wednesday morning for Bangor also about twelve miles from Sparta. Arrange to attend both sales. They have good Durocs and deserve your patronage. Shea is selling a good, useful lot of Durocs, sired by good boars and out of some of the best sows owned in the state. Mr. Shea has one of the best sow herds that we know of. The big kind that show by their udders that they have been raising more than one or two pigs. We like to get our breeding stock from sows that farrow and raise large litters and if you are of that opinion you'll be pleased with the sows in the Shea herd. In last week's issue we commented on the boars doing service in this herd. Col.'s Choice and Pal's Defender are as good breeding boars as can be found in the state, they have demonstrated their ability. The young boar, Pathfinder 2d, comes from a line of breeding that is most popular. You will make no mistake if you attend this sale. This being his first sale Mr. Shea does not expect any high average and no doubt there will be good buys made in this sale and if you are "on the job" you'll get the benefit. If you can't attend be represented—send instructions to T. P. Shreve, who will represent The Wisconsin Farmer. If you haven't received your catalog, write for same at once and mention this journal. See page 25.—Adv.

DISPERSION SALE OF

OAK LODGE HERD OF A. R. O.

HOLSTEIN-FRIESIANS

ELKHORN, WIS., JAN. 30, 1917

38 COWS AND HEIFERS, 10 BULLS

INCLUDED in the lot are six cows and heifers with yearly semi-official records from 542.44 to 936.64 pounds of butter and thirteen of their sons and daughters. Four daughters of the cow with the 936.64-pound record. Almost every animal has an A. R. O. record or is from an A. R. O. dam. Herd is headed by Beauty Walker Pietertje King, whose seven nearest dams average 28.72 pounds of butter in seven days. On his daughters we are using Colantha Hamilton Pietertje, a son of Colantha Hamilton, that made 30.51 pounds of butter from 587.2 pounds of milk in seven days as a junior three year old. She is out of Betsey Hamilton Beauty 32.39. Auctioneers, R. E. Haeger and Jack White. Catalogs ready Jan. 15th. Address

HARRY D. DUNBAR ELKHORN, WIS.

"The Three Best Poland Boars in One Herd."

THAT s a strong statement, but those that have seen, Master's Giant, Orange Wonder and Young's Big Joe, say that P. W. Young, Prosper, Minn., has the three best Poland China boars doing service in one herd in America. Mr. Young is a constructive breeder. He is always ready to buy a boar or a sow if he thinks the addition will improve his herd. In Master's Giant and Orange Wonder he has two boars that would make a reputation for him, but soon as he saw the Big Joe boar he thought that the cross would prove beneficial, and it certainly can do no harm. Tuesday, February 6, 1917, is the date of his annual bred sow sale. It will be a Master's Giant-Orange Wonder sale. Mr. Young made the right nick when he crossed Master's Giant sows with Orange Wonder, for the best gilts that go in the sale are from this cross. We believe that Mr. Young has as much quality in his big-types as any breeder we know of. In this issue we will mention something of the record of the herd boars. Master's Giant won the yearling futurity at the Iowa State Fair in 1913. Second in the aged class at Iowa in 1915 weighing 1,005 pounds. He is out of the great sow, Mabel's Choice 2d, that sold for $400. Orange Wonder won first as senior yearling at the Minnesota State Fair in 1915. Combines the breeding of Big Orange, A Wonder, Giantess and Mollie Fair families. Young's Big Joe is "some boar." He weighed 800 pounds the day he was eighteen months old. He will be shown at the fairs this fall weighing better than 1,000 pounds. This boar has the most quality, for a boar of his scale, we have ever seen. This should be a wonderful cross on the Master's Giant-Orange Wonder sows. In next week's issue we will tell you something of the sows that will be sold, but plan now to attend one of the greatest Poland China sales to be held in the Northwest this season. Write at once for one of the catalogs. Please mention The Wisconsin Farmer when writing. See page 29.—Adv.

Plan Your Swine Week.

THE Chester White sale of Cook, Schiebe and Vaughn is the opening gun of the Swine Week planned for Wisconsin breeders. Every Chester White reader of the Wisconsin Farmer should plan to attend this sale. There are several reasons why. Firstly, it is the only Chester White sale scheduled for Wisconsin. Secondly, you will see a mighty good bunch of gilts. Thirdly, pork promises to be very high next fall as the supply will be very low. High-priced pork always makes a big demand for breeding stock. There will be forty gilts in the sale, the tops from the herds of Cook Brothers, W. C. Scheibe and W. W. Vaughn & Son. These are three of the best herds in the state. During the past season animals from these three herds won forty-seven first, thirty-five second, seventeen third and seven fourth prizes; two sweepstakes and two grand championships in heavy competition, including the Wisconsin State Fair. W. W. Vaughn has been breeding Chester Whites for twenty-two years and has shown at the Wisconsin State Fair twenty years. The offering is of well-known and proven lines of breeding. They are well grown and of good type. They are bred for March and April litters to outstanding good boars. The sale will be held in the city of Burlington at Gill's Livery barn on Feb. 5th. No driving in the country and a warm, comfortable barn regardless of weather conditions. Burlington, Wis., is conveniently reached over the C. M. & St. Paul or Soo railroads, there being twenty-two trains per day and electric interurban trains every two hours f om Milwaukee. Out of town buyers will be entertained free of charge at the Burlington Hotel. Send for a catalog of the offering to W. C. Scheibe, Burlington, Wisconsin, and mention The Wisconsin Farmer when writing. Auctioneer, C. C. Evans. Field man, Wisconsin Farmer, H. S. Hoard. See page 26.—Adv.

Brook Valley Farm Stock.

WE have just had a letter from P. N. Collins, River Falls Wis., advising that he has had an excellent trade in Poland China boars. This fact demonstrates that he raises the type that the

public want—the big type. Mr. Collins has a good herd of sows and at this time he is offering gilts bred to two good boars, namely Chief Price 264707 he by the champion, Big Price, and the other boar is a son of the great Hendricks boar, Black Jumbo. This latter boar is one of the best that was sold in the Hendricks sale last fall. Mr. Collins also has a few Short-horn heifers that he can spare. They range in age from twelve to fifteen months, are red in color and are right in every way. Remember that good Short-horn heifers are in demand and here is a chance to get a few at a very reasonable figure. Write Mr. Collins if you are interested in either of the above breeds. Don't forget to mention The Wisconsin Farmer when writing. See page 27.—Adv.

Duroc Jersey Sale at Janesville, Wisconsin.

THE first sale of Duroc Jersey sows and gilts ever held in the city of Janesville, Wisconsin, will take place on Thursday, February 8th, the day following the breeders' sale at Madison. Those interested in good Durocs should arrange to attend both sales. John L. Fisher, the owner of the Wisconsin champion, King Defender; E. H. Parker & Son, the owners of King Orion, a son of the Omaha champion, Orion Cherry King Jr., and three other local breeders have contributed to this sale. Mr. Fisher will sell about twenty spring gilts and tried sows. They are out of daughters of the champion Illustrator, A.'s Defender (this sow, litter mate to Lee's Defender), Pal's Col., Joe Orion 2d, and safe in pig to the 1,000-pound grand champion, King Defender. No breeder of the state has better blood lines in his herd than John L. Fisher, and inasmuch as this is the first time he ever consigned to a swine auction, he is giving you the best he has. Fisher is one of the live wires of the Duroc fraternity in the state. E. H. Parker & Son will sell about fifteen spring gilts. These gilts are in nice condition and are sired by a Golden Model 2d-Defender bred boar and a son of the noted Royal King. The dams of these gilts are by such noted boars as Marion's Wonder, Volunteer, Orion Chief, Lee's Defender and Illustrator. They are bred to King Orion, one of the best yearlings and the only son of Orion Cherry King Jr. in the state. You can buy sows and gilts bred to a grand champion of Wisconsin and a son of the world's champion. Make a note of this sale and arrange to attend. Mail bids should be sent to T. P. Shreve, field man for The Wisconsin Farmer. Write at once for the catalog. Address P. V. Kuhn, Secretary, Janesville, Wis. Please mention this publication. See page 28.—Adv.

Be at Willsie's Friday, February 2d.

THIS is the last opportunity we will have to call your attention to the forty head of Duroc Jersey sows that will be sold by George Willsie at Prosper, Minn., on Friday, February 2d. Mr. Willsie is selling a lot of sows and gilts that will make money for the buyer, for we do not expect them to sell so high, but what the buyer can double his money the first year. We don't mean that he hasn't good hogs, for he has, but inasmuch as he has never shown Durocs he does not expect to get the average that some of the breeders do that go out and show at the various state fairs. No breeder in the state has had two better breeding boars than Chief Defender and Big Col. and most of the progressive breeders are getting some of this blood in their herds. The tops of many sales the past two or three years have been daughters of Chief Defender. Big Col. sows are just beginning to be appreciated and when you see the gilts sired by him sale day, you'll not stop bidding until you get one. The best gilts and sows have been bred to Top Col. King, a yearling son of American Top Col. out of a King of Cols. dam. This boar has been used very heavy and is very thin in flesh, but those that can appreciate a boar not loaded with fat will not be disappointed in this hog. We believe that Mr. Willsie will make a boar out of him that they'll all look at next fall. If you havn't received your catalog by this time get one at once. Remember that Atwater sells on Wednesday and Willsie Friday of the same week. Owing to the fact that Hyzer and Sprain dropped out it leaves an open date in between. Send bids to T. P. Shreve, field man for The Wisconsin Farmer. Be sure and attend if possible. See page 30.—Adv.

Where Price and Quality Meet.

SUCH is the slogan "patented" by Tulloch & Fries, Genoa, Wisconsin. They sure have a herd of Holstein cattle that have the "quality" combined with production and you simply can't duplicate the price at any other breeding establishment. Mr. Fries was formerly of the firm C. C. Fries & Son, Richland Center, Wisconsin, and the public of Wisconsin are familiar with the various cows that the junior member "brought out." Some time ago Mr. Fries bought a half interest in the Tulloch herd of Genoa. Mr. Tulloch had purchased some of the best cows that money could buy and these combined with a few record cows owned by Mr. Fries gave them a foundation herd of Holsteins second to none in the western part of the state. At this time the above firm is offering several young bulls sired by a 32-pound sire and out of A. R. O. dams, with records up to 24 pounds butter in seven days. If you want a bull good enough to head the very best herd, write them about one they have out of a daughter of King Pontiac Portia and the great cow, Aaggie Texal Wayne 2d, and sired by Richland Pontiac Butter Boy, the 31.76-pound sire at Richland Center. It will pay you to investigate the young bulls being offered by the above firm. Write them at once and please mention The Wisconsin Farmer. See page 31.—Adv.

Madson & Sons' Poland China Sale.

MADSON & SONS' annual sale of bred Poland China sows will be held in Madison, Wisconsin, Tuesday, February 6th. This will be during Swine Week and those planning to take in this event should also attend the Madson & Sons' sale, for they are selling a bunch of Poland Chinas that are better than ever offered before by these prominent breeders. The sale will be held in Drs. West & Wolcott's veterinary barns at 753 East Washington Avenue and will begin at one o'clock, Tuesday. The Madson Poland Chinas have been conspicuous winners at the state fairs during the past several years. They have bred their winners and are among Wisconsin's leading breeders. During the past year, the junior member of the firm made a trip through Minnesota, Iowa and Illinois in search of boars that he thought could be used to advantage in their herd. One of the boars purchased is a son of Choice Expansion, the Gerlich & Barker boar—out of Lady Defender. The writer is very familiar with this line of breeding, in fact, it has been this strain that has made E. S. Barker the leading breeder in Minnesota. The young boar is called Defender and he is a real prospect for a junior next year at the big fairs. Big Ben, a boar that needs no introduction to the public, is the sire of one of the young boars purchased and he comes from a Big Bone bred sow. He is of the biggest of the big-types. Big Carver is the yearling boar that was the sensational winner at Illinois and the Madsons have a son of this boar in their herd that you will like. In these three boars, these breeders have prospective herd sires that will appeal to the lovers of good Polands. The majority of this sale offering are safe in pig to their service. A few have been bred to Triumph, the show boar and son of the good sire, Hidestretcher. Get a line on this offering by reading the catalog. This is the year to buy pure-bred sows and the Madsons have the goods. They have a catalog for you and if you will send them your name they will be glad to send you one. Write at once to the above firm, addressed to Madison, Wis., and don't forget to mention The Wisconsin Farmer. H. S. Hoard will represent this paper at the sale. Watch next week's issue for further announcement. See page 26.—Adv.

A Good Short-horn Herd.

W. J. BERND, New Richmond, Wis., has one of the good herds of Short-horns in the state of Wisconsin and the best herd in the northern part of the state. If you want Scotch cows of the most fashionable breeding, he has that kind; if you want Scotch-topped cows that are heavy milkers, he has that kind. The get of Rosebud Champion is being offered at this time. This bull won second at the Chicago International. A few are being offered sired by Highland Sultan, a third-prize bull. The good bull, Buchon Marshall, that comes from International winners is the sire of some of the young stuff. Mr. Bernd's cows are noted for their size and milking qualities. Your wants can be supplied whether you are in the market for reds, whites or roans, bulls or females. Mr. Bernd is one of the old-time Short-horn breeders of the state and you will not make any mistake if you investigate what he has for sale. New Richmond is just over the

WEST SALEM WISCONSIN

THE WISCONSIN POLAND CHINA BREEDERS

WANT TO MEET YOU AT

MADISON, WISCONSIN, WEDNESDAY, FEBRUARY 7, 1917

50 WELL-BRED, WELL-GROWN, BIG-TYPE POLAND CHINAS SELL

THE BEST IN THE STATE

THE members of the Wisconsin Poland China Breeders' Association are making this sale, **not** to make money, but to try to stimulate more interest in **pure-bred swine,** and especially their **chosen breed**—the **Poland China.** The greatest opportunity ever offered the beginner, to inspect the tops of the various herds in the state. The greatest opportunity ever offered the old breeder to get new blood for his herd. Each bred sow will be an advertisement for the herd from which it is entered, so it is only natural to expect to see the best. We have seen sows that are going in this sale that will weigh close to 800—gilts of last spring farrow that will weigh 400. They have been bred to boars that have weighed over 1,000 pounds. Come and be convinced that one can raise big types that possess as much quality as the medium kind—but look how much more size they have. "Swine Week" means any and everything pertaining to the swine industry. A "get-together" week. Be sure to attend, and especially this sale of **bred Poland Chinas.**

SPECIAL NOTICE

Sale takes place **at night** in the **sheep pavilion** on the **University Farm. Sale will start at 7 o'clock. Poland Chinas sell at night—Durocs in the afternoon.** Remember. Cols. Ira Cottingham and Lloyd Seeley, auctioneers. T. P. Shreve, field man for The Wisconsin Farmer. Write for the catalog at once and mention The Wisconsin Farmer. Address

GUERNSEY CATTLE.

A Guernsey Show Bull Backed by Show and Production Records

DAM, Beatrix B, that at two years, five months of age, made 428 pounds of fat and gave 9,024 pounds of milk testing 4.74% fat. She is a daughter of Atwood Prince, whose offspring have been heavy prize winners and whose get of sire was never defeated. His seven A. R. daughters average 460 pounds fat at three years, five months. Sire, King Talladeen of Chestnut Hill, that has been first and champion at several leading fairs, has sired many prize winners. His dam made 635 pounds fat from 11,907 pounds of milk. Price $125. Two other yearling bulls of Glenwood breeding for sale from A. R. cows. Can also spare a few females. Send for our sale list or, better yet, come and visit Waukesha. If we haven't got what you want some of our fellow breeders will have.

FOX BROTHERS **WAUKESHA, WISCONSIN**

HORSES.

PROPRIETORS OF THE WHITE CITY STOCK FARM.

WE have never offered to our trade a more superior lot of Percheron and Belgian stallions, in both imported and American bred stock, than we can now show. Our imported horses are young and thoroughly acclimated, many of them having made seasons in 1915 and 1916 and are tried and tested sires. Our American bred horses were selected from the best breeders in America and are out of noted sires and dams and are horses of great quality in every respect. We have especially selected ten black and dark gray 2 and 3 year old Percheron stallions weighing 10 tons. These are all outstanding horses and should be purchased by those who need a sire for full-blooded mares. Among them is Coco, 1st prize 2 year old and reserve champion at the Wis. State Fair. This colt is black in color and weighs a ton. To the early buyer we offer one of the greatest collections of ton stallions to be seen in any importing barn this winter. We have no old, worn out, picked over stallions on hand Let us know your wants, or better still, come and spend a day or two. A hearty welcome awaits you. Send 25 cents in stamps for large horse hanger, which shows the picture of a number of stallions now on hand, our main farm and sales stable and our firm's picture. Will sell several of our choice Iowa farms on easy terms.

FRANK P. SHEKLETON & SONS **LAWLER, CHICKASAW CO., IOWA**

We are 50 miles west of Prairie du Chien, Wis., on the Milwaukee R. R., making direct connections for Lawler.

A 31.02 POUND BULL FOR SALE

RACINE JOHANNA PIEBE MERCEDES 188460. Born December 8, 1915. Well marked, of excellent conformation and well grown. His dam, **Ella Mercedes of Elm Court,** made **31.02 pounds butter** in seven days; **130.47** in thirty days and **829.78** in a year. She is a big cow weighing over 1,600 pounds; her dam weighs over 1,700. His sire, **Racine Sir Johanna Piebe,** is a show bull. His dam is a show cow and weighs close to 1,600 pounds. In seven days she made 24.49 and 808.82 pounds butter in a year. Send for his complete pedigree and picture. **Large size, good, straight type** and **heavy production ability** have been bred into this bull for generations. Come to our farm and see his dam, grandam and sisters. They are the type you will want in your calves. Am also offering a straight, well-grown heifer, born May 15, 1916, out of Lady Johanna of Elm Court, a half sister to Colantha Piebe of Elm Court; calf is sired by Count of the Pontiacs.

Reuben Klofanda R. 1, Racine, Wis.

HOLSTEIN BULL FOR SALE
Ready For Service

BORN January 1, 1916, sired by a proven son of King Segis De Kol Korndyke, sire of the first 40-lb. heifer and brother to the sire of the $50,000 bull and the $35,000 bull. Records of his dam and two nearest dams of his sire average butter, 7 days, 29.44 pounds. He is a good individual, a trifle more black than white. Priced right for immediate sale. Address

PINEHURST DAIRY SHEBOYGAN FALLS, WISCONSIN

HEAD YOUR HERD WITH A WINNER

GET INDIVIDUALITY WITH BREEDING. Would you like to head your herd with a brother to the junior champion Holstein bull at the Minnesota State Fair, 1916, or the junior champion bull at the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of that blood that won for us the Premier Breedership at the Southwestern Dairy Show and the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of the blood that enabled us to win the Wisconsin Farm Management Contest, 1915? DO YOU want to breed individuality and production into your herd? If so, NOW is your chance. We offer some 20 choice young bulls from 1 to 15 months old bred in these lines. They are sired by our senior herd sire, Bairdland Segis Sir Prize, and out of daughters of Sir Urmagel Burke, a 31-lb. bull, with a 35-lb. sister. These daughters are making from 18 to 25 lbs. as 3 and 4 year olds. WHAT would one of these youngsters be worth to you? Write us your wants or come and see them. Herd tuberculin tested. Each animal guaranteed to be a breeder.

BAIRD BROS. - - - - WAUKESHA, WISCONSIN

TWO HOLSTEIN BULLS EIGHT MONTHS OLD

SIRED by Johanna Chief De Kol, that has 62½% of the same breeding as Johanna De Kol Van Beers, 40.07 lbs., with 7 tested daughters. First bull out of a 20.51-lb. dam, she sired by a grandson of De Kol Burke. Second bull out of a 19.50-lb. four year old, she a granddaughter of Sir Johanna Fayne, with a 31-lb. daughter. Also a few heifer calves nearly one year old by the above sire. Prices reasonable. Address **Edward O. Mueller, Appleton, Wisconsin**

HOLSTEINS AND GUERNSEYS

REGISTERED and high grade cows and heifers—service bulls. Carload or less. High grade calves, $18.00 each crated. Write us. We have what you want. Address

EDGEWATER STOCK FARM FT. ATKINSON, WISCONSIN

RUST BROS.

OFFER the richly bred Holstein-Friesian bull, Sir Ida Lotta Hengerveld 188663, born Aug. 18, 1915. Ready for immediate service. His dam, Ida Lotta Hengerveld, at three and one-half years of age made 21.34 pounds of butter in 7 days, 31 days after calving. She comes from a long line of heay producing ancestors, the records of her three nearest dams averaging 27.20 pounds of butter in 7 days. She not only has inherited this heavy producing ability, but also transmits it. The sire of the bull for sale is Daisy Johanna 5th, 1st prize two year old at the Wisconsin State Fair in 1915. He is out of a dam having two A. R. O. daughters. Address

ARTHUR RUST
West Allis Wisconsin

LET 1917 BE A YEAR of GREATER SAVING ON QUALITY GOODS

"The best separator I know how to build."
—Wm. Galloway.

Four New Sizes—Skimming Capacities 375, 500, 750 and 950 lbs. per hour

Get my new 1917 Wholesale Prices

I AM STILL "DIVIDING THE MELON!"

By making better farm implements in greater quantities and selling them at the lowest possible prices. My prices on the highest quality Cream Separators, Gasoline Engines, Manure Spreaders, Tractors, etc., that I manufacture in my own chain of factories right here in Waterloo include only the cost of raw material, the skilled labor that is required to produce them and one small profit, based on enormous volume. I sell these goods direct to you—from FACTORY TO FARM—without a single dollar of expense in selling through the ordinary salesman-jobber-dealer methods. My motto is NO LOST PROFIT BETWEEN PRODUCER AND CONSUMER. Galloway prices have **not** advanced more than to take care of the increased cost of first-class materials and the expert labor that it takes to turn out high-class gasoline engines, cream separators, manure spreaders and tractors. I was the first manufacturer to offer a high-grade gasoline engine direct to you at one small profit. I built the first high quality spreader and sold it direct at a reasonable price. I was the first bona fide manufacturer of high-class cream separators to build and sell direct to you on the farm, cream separators as good or better than you have been paying fancy prices for. The whole story about the growth of the Galloway institution, the policies and selling plans on which we sell high-class goods, the growth of the great chain of Galloway factories, the story of the **MILLIONS OF DOLLARS OF SAVING** I have made directly and indirectly for the farmers of America is told in Galloway's 1917 catalog. To get this book, to read it, to study it means that 1917 will be a year of great saving for you and it will prove that I am **STILL DIVIDING THE MELON WITH MY FRIENDS AND CUSTOMERS.** Ask for this book today. Read the advertisement below. Please state what you are interested in buying and I will send the book free by the first mail.

MY NEW SANITARY CREAM SEPARATOR

IS NOT EXCELLED in skimming ability, in beauty of design, in the fine material which goes into building, in workmanship, finish or the lasting satisfaction that it will give every user, by any cream separator on the American market. Remember, that we took four years to design and perfect this separator--to build into it every good cream separator feature.

It has not been built down to a price as many separators have been, but instead has been built up to a high standard IN OUR OWN FACTORIES right here in Waterloo. Don't get fooled on separators only assembled by so-called manufacturers and priced at figures you positively know a satisfactory sanitary cream separator cannot be built for. Stand the Galloway side by side with cheaper machines and YOU WILL SEE THE DIFFERENCE in material, workmanship, down-to-date design and skimming qualities. Stand it beside the highest priced machine--test them side by side for months and you will see that higher-priced machines will not run any easier or skim any closer, cannot be more perfectly sanitary, nor better built.

TRY IT 180 MILKINGS ON YOUR OWN FARM!

Note its few strong, simple, sanitary parts. See how easy to wash and clean--no sharp corners. Bowl catches any foreign matter in the milk while skimming. Only two shafts in the whole gearing, both of high-carbon steel, in long, perfectly fitted bearings. You will find all gear shaft and both bowl-spindle bearings supported by one casting--the gear case. This means perfect alignment, little wear and easy running. All working parts run in a SPRAY OF OIL. Note that the cream shelf drops when not in use--that it forms a vise to hold the bowl while handling.

I just want you to try this separator. If you like it, buy it. IF YOU DON'T, SEND IT BACK. We pay freight BOTH WAYS. If the new Galloway Sanitary is as good as I say it is you can't afford to buy any other kind. If it is not as good as I say it is I could not afford to make this 90-day (180 milkings) trial offer, and I could not afford to GUARANTEE IT TEN YEARS, nor make

EVERY SALE BACKED BY A $25,000 BOND

Ask for Galloway's 1917 catalog today. I want you to have this book. It tells how we build Galloway Sanitary Separators from the ground up. How they are designed, and the story of how we perfected this wonderful cream separator. It gives many separator secrets and facts. Chock full of dairy wisdom. Why by selling direct I can make a machine as good or better than many high-priced separators sold through the three and four profit system and sell it for much less.

My Book Is Free to You

It tells the whole story. It tells the facts. It will settle the separator question for you. ASK FOR IT TODAY and mention cream separators.

"Yes sir, I divide the melon with you!"

MASTERPIECE ENGINES FOR 1917 INCLUDE EVERY SIZE-STYLE

No matter whether you want a stationary pumping engine, a 4 h. p. portable engine to move about, a 6, 9 or 12 h. p. saw rig, a horse portable 16 h. p. mogul engine for the biggest, toughest jobs--I BUILD THEM in my own factories right HERE IN WATERLOO and sell them DIRECT TO YOU at the actual cost of material and labor and one small profit which is based on tremendous output. I want you to try a Galloway engine on your own farm or in your own shop and see for yourself how scientifically they are designed, how wonderfully built, machined and finished. If you pay more you are PAYING TO MUCH. If you pay less for an engine than for a Galloway Masterpiece you COULD NOT POSSIBLY be getting as good an engine. I want a Galloway Masterpiece 1917 model gasoline, kerosene or distillate engine in every township between now and April 1st, and my 1917 special prices and proposition will put them there. Ask for Galloway's 1917 catalog today.

HERE ARE THE 1917 IMPROVEMENTS!

Galloway Masterpiece engines for 1917 are masterpieces of mechanical construction. My new simplified, improved models are master strokes in engine designing, built by master engine builders, of superior materials--every part standardized, interchangeable, alike. All Galloway engines develop WAY ABOVE RATED H. P. Bearings adjustable. Economy carburetor, worth $15 more on any engine--costs nothing extra on the Galloway--cuts down fuel bills. Valves in the head, exactly like highest-class automobile motors. Double ball governor, never sticks, regulates speed perfectly. Large, heavy flywheels. Large bore, long stroke, heavy weight, perfect balance. (Galloway engines will not rack and tear themselves to pieces like high speed, light weight engines). Perfect lubrication, winter or summer. Magneto (extra) supplies blue-hot spark. Make and break Galloway igniter, never misses fire. EASY TO START--no cranking, needs no batteries. Cylinder and water pot frost-proof. Compare the 1917 Masterpiece engine size for size, bore, stroke, weight and low speed (which means easy running and long satisfactory engine life) then be your own judge. My

Air Cooled 1¾ H. P.

FIVE NEW SELLING PLANS NOW READY!

Buy on your own terms--cash or time--any way to suit you. That's how I sell all Galloway products. My 1917 book describes each plan in full. Tells how to pick out, size up and judge an engine. Tells why to insist on HEAVY WEIGHT, LARGE BORE, LONG STROKE and LOW SPEED. Tells how to install an engine and hook up machinery. How to lay out and build a cheap, efficient power house. Why our prices are so low considering quality. This book will guide you to saving upwards of $250 or even more in fitting up a complete farm power house. That is why I want you to get it.

HEAVY DUTY 4-6 9-12 16 H.P.

FROST PROOF NOT OVERRATED

1917 EFFICIENCY TRACTOR = MY No. 9 IS NOT A HORSE KILLER

Users call it the wonder of all farm tractors. It is unlike other tractors for we have eliminated unnecessary friction and built it along automobile lines. How far and how easily could you go in your automobile if it had an axle like your farm wagon or your mower? The Galloway Efficiency tractor is built with **anti-friction bearings.** Twenty-one sets of Hyatt roller and ball bearings--which save engine power for the draw bar and the pulley--where power is really needed. By actual dynamometer test the Galloway tractor only takes 13 1-2% of the motor's power to drive the tractor unloaded. On many tractors it takes from 30 to 50% of the engine power to propel themselves.

A ONE-MAN TRACTOR—OTHERS ASK $500 MORE!

This new tractor has a four cylinder, valve in the head, modern motor, water cooled; **all** working parts protected. 12 h. p. on the draw bar and 20 h. p. on the pulley guaranteed. Turns short. Weighs 5,200 lbs. Transmission a unit with the motor. We have **exclusive manufacturing rights** on this patented transmission. Will pull three 14-in. bottoms 8 to 9 in. deep in clover or timothy sod. Will do any portable engine job--sawing, silo filling, corn shelling, shredding, handles a 28-in. grain separator, any kind feed grinder, a pumping or irrigation plant. **Double chain drive.** Engine runs in tight oil-bath case. Rear wheels 68 in. high. Famous Pierce governor on the motor—engine never races. **Only two levers control it.** Complete description of this wonderful farm tractor in my new 1917 book.

Le Mars, Iowa, November 15, 1915.

Wm. Galloway Co., Waterloo, Iowa.

Gentlemen:—

I have tried it out in every way and it is right up and coming. I have run an ensilage cutter with it, filling a silo 16x32 ft. two-thirds full in 4 1-2 hours and it was play for it. I have plowed in all kinds of soil, stubble, backsetting and clover sod and wild prairie sod. I can pull the three plows 6 inches deep in the prairie sod and do it with ease. I know it has power enough to pull four plows in stubble. It is very economical on gas and oil. After the demonstration here three different parties here told me it did better work than at the Fremont plowing match.

GEO. R. STEELE.

My new catalog illustrates and describes this tractor in full. Ask for it today. If you are going to buy a tractor within the next twelve months, kindly let us know.

Driver in Absolute Control at All Times

Plows, Hauls, Threshes, Saws, Grinds, Shreds, Grades Roads, Fills Silos

Will Pull Three 14-in. Bottoms 8 to 9 in. Deep in Clover or Timothy Sod

Pulls anything, anywhere, any time.

Does anything a 12-horse team or 20 h. p. engine will do.

But is the lightest draft, best built, low down spreader in the world, with all four wheels under the load. It is worth more to you **in the field in actual use** than any other spreader. First—it is low down—only 42 in. high to center of box. Two horses handle it anywhere. The Galloway wide spreading V-rake — **worth $15 extra** on any spreader, costs you nothing extra on the Galloway. The invincible irresistible patented roller feed—an exclusive Galloway feature—the secret of its light draft—**alone worth $25** on any spreader, costs you nothing extra. Patented automatic stop, uniform clean-out push board—**worth $10 extra** on any spreader, costs you nothing extra, exclusive on the Galloway.

SHORT TURN—WHEELS UNDER LOAD —STEEL BEATER!

These are **only a few** of the special features you will find on the Galloway spreader, all of which are protected by Galloway patents. Don't buy a spreader of any make or kind until you have tried a genuine Galloway 1917 model No. 8, No. 5 or No. 1A at our risk, **without obligating yourself** in any way. Give my spreader THIRTY DAYS' ACTUAL FIELD TRIAL and return to me within one year if not perfectly satisfactory. Could anything be more fair? Could you want a better offer?

My 1917 spreader improvements include beater bolts 1-16 in. larger with lock nuts. Beater bar bolts increased in size and strength. Beater teeth longer and stronger than ever--tear the toughest manure finer than ever and spread it easier. Rear shaft increased in strength--higher carbon steel used. Larger drive sprockets, which mean lighter draft than ever. Fifth wheel castings larger and stronger--makes spreader box steadier in turning. Rear conveyor shaft now made of 40 carbon steel. All steel tongue. All metal parts thoroughly coated with asphaltum weather-proof paint. Spreader box better finished and painted. No other spreader compares with it.

ASK FOR MY 1917 CATALOG. It tells all about manure spreaders--how to increase your corn crop. How to increase small grain crops by the judicious use of manure. How to handle manure with the least labor. How a Galloway spreader will pay for itself in one year by increasing crop profits. How we save you money on a high class, light draft spreader and **still give you a better spreader than the old-fashioned, cumbersome three and four-horse machine.** How a run-out, unproductive farm was turned into a gold mine crop producer. Why I built a manure pit on my own dairy farm to save all fertility. Ask for this book today and if interested in spreaders please say so.

Gear lever throws both both sides of beater in gear simultaneously.

Adjustable Feed Lever—Convenient, Accessible.

Steel Tongue

Angle steel endless apron. Double chain drive.

All-steel V-shape rake Patent roller feed

From 4 to 24 Loads Per Acre

ASK FOR MY BOOK TODAY! NOW!

I want you to have it. All I ask you to do is tell me what you are interested in—what you expect to buy—what you need on your farm, whether one, two, or all of the above lines that we manufacture. A postal card will do. Make it a letter if you like. I know I can save you money if you will get this book before you buy. It will show you that I am still dividing the melon here in Waterloo. Remember we ship engines, spreaders, separators from our transfer houses in Council Bluffs, St. Paul, Chicago, Kansas City and from the factories here in Waterloo. Also remember that we WANT YOU TO COME AND SEE US any time you can. The latch-string is always out at the Galloway Agricultural Club--a building that we put up to take care of our friends and customers when they come to see us. Thousands visit our offices, club building, display and sample rooms and factories every year. Why not come and see us yourself?

VOL. XLVI. NO. 4. THURSDAY, JANUARY 25, 1917. WHOLE NO. 1826

Indiana Univ.
Urbana Ill.
Oct 16 1917

The "Family Unit" Type of Farming

HERE IS A CHESTER WHITE HERD WELL UP ON THEIR TOES AND WITH SPLENDIDLY ARCHED BACKS.

ATTENTION has frequently been called to the fact that the glut of new land has eliminated the necessity for efficiency on the farm in times past. We have engaged in extensive rather than intensive farming, but now that all our best lands are occupied, we are confronted with the necessity of increasing the efficiency not only of the individual, but of the farm family. Facing, as we are, the insurmountable difficulty of hiring help to tend more acres, we find relief in varying the plan of farming, so that all members of the family may have a part in making the same acres produce more. This does not mean a theoretical condition that cannot be worked out in practice, because here and there throughout the entire corn belt can be found fine examples of this so-called "family-unit" type of farming.

At this time we have in mind the 240-acre farm operated by G. L. Emmert & Sons, in Cerro Gordo county, Iowa. To begin with, this farm was wet, and it was uphill work to make desired improvements out of the income from the land, and outside capital was not obtainable. At first an attempt was made to solve the problem by handling more land, but this divided the family without increasing the efficiency of the indiv l-uals. The next step was to tile the land, and the outcome of this venture furnishes an example that might well be followed by thousands and tens of thousands of central western farmers. It was not all accomplished in a season, but as each forty was tiled out, yields were doubled and trebled, thereby furnishing new capital for more tiling, for farm buildings, for comforts and luxuries in daily living. On this very page some improvements, that are the outcome of this tiling program, are shown in illustration. Here is a barn, 34x82, with thoroughly equipped stabling for fifty head of animals. The group of buildings includes a 160-ton hollow tile silo. There is, in addition, a magnificent eight-room hollow tile dwelling with stucco facing equipped from basement to garret with modern conveniences that cannot possibly be excelled in any city home. The basement furnace does away with the need of the old-fashioned stove with the attending dirt and grime, saying nothing of the labor of caring for it. A complete wiring system for electricity is installed ready for the turning on of the current, and there is, in addition, a basement vacuum cleaning system, which is one of the greatest godsends that has ever come to the farm woman. The equipment in this home means increased efficiency of those who have it in charge. Imagine what it would mean in the cutting down of labor if all farm homes could have water under pressure in every room, as in the case in this instance. Compared with the old-fashioned plan of carrying water from out of doors, one may safely assert that the labor is cut squarely in two, because the plumbing system in this home includes waste pipes that reduce enormously the number of steps in a day's work. We shall later on see that effective work is being done in every department of this 240-acre farm, but nowhere do we find it excelling that performed in the home, because Mrs. Emmert, with the equipment that we have described, is not a slave to the washtub and dishpan, but an alert, interested helper, working out with her husband and with her splendid sons an efficiency program on this beautiful farm.

When you go to the stables you find Frank in charge of the dairy cattle. He has done good work in getting together a productive grade Holstein herd, with a sire at the head chosen from high-producing ancestors. Two things are required of every cow in this herd, or she is sent to the shambles. She must have large productive capacity and, secondly, she must be able to sustain it throughout a long lactation period. In the dead of winter, with only twenty-one cows giving milk, Frank's weekly returns are running from $75 to $85. The milk is disposed of to a wholesaler for $2 per hundred pounds in winter and for $1.75 during the spring and summer

FINE BASEMENT BARN WITH EVERY IMPROVEMENT IN INTERIOR THAT A MODERN BARN SHOULD HAVE.

HOLLOW TILE FARMHOUSE WITH STUCCO FACE, EQUIPPED WITH MODERN CONVENIENCES FROM CELLAR TO GARRET.

months. But this fine income is not the result of change. As before stated, the cows are large producers, but this is only half the story, because they are liberally and scientifically fed. No bulletin on feeding dairy cows has escaped Frank in recent years, and he long ago learned that a dairy cow should be fed grain in proportion to her productive capacity, and he is now obtaining excellent results from feeding one pound of grain to three pounds of milk produced. His grain mixture is composed of 200 pounds of corn meal, 100 pounds of bran, thirty pounds of cottonseed meal and twenty pounds of oil meal. The cows are fed twice a day and in addition to their grain they are given about three pounds of ensilage for each hundred pounds of live weight. This means that a cow weighing 1,000 pounds will consume thirty pounds of ensilage in a day. In addition, this dairy herd receives all the good hay that they will consume. They spend the cold days in their stanchions and are only turned into the yards at watering time. The condition of these cows and the fine, big, well-developed udders that they show right in the middle of winter indicate that this plan of feeding is a meritorious one, and every dairyman who is not satisfied with his returns can well afford to follow the fine example of Frank Emmert in handling his dairy herd as outlined above.

But there is another interesting thing in connection with the management of this herd. They are not milked by hand, but by machine. Five years ago a milking machine was installed, and it has operated most successfully ever since. It has been found possible to milk as many as twenty-eight cows in an hour and to do it most efficiently. Head work is needed, to be sure. The easy milker requires less and the hard milker more "vacuum," so that, after all, success in operating the machine depends on the skill of the operator. Three men would ordinarily be required to do the milking in this herd in order to get it done on time for delivery. As it is, the machine, under the operation of one man, performs the service and not more than two or three times in the entire five years has it been out of condition, necessitating milking by hand. All in all the milking machine is a great success on this farm, and it is safe to say that it has multiplied the efficiency of one man at least 100 per cent.

But there is another important department on this farm with another son, Ben, in charge of a fine, pure-bred herd of Chester White hogs. Ben is literally a crank on good breeding, and he has already made his mark as a showman, because the records of the 1915 Iowa State Fair show that Ben captured the grand champion ribbon on W. A.'s Wonder, the real meaning of this honor being that this was the great boar in the Chester White classes at the Iowa fair that year. A $1,000 cash offer was refused for this hog, and it was turned down because Ben believed that herd improvement necessitated the use of the best sires obtainable. A study of the old sows, the gilts and the yearlings in this herd shows that there has been a complete transformation in the type of the Chester in the last decade. Every student of this breed knows that they were formerly low in the back and in many cases they were simply wretched in their feet and legs. Here is a herd well up on their toes, with splendidly arched backs and with scale and quality to suit the most fastidious taste. The cafeteria system of feeding is practiced, and here and there in the hog yards can be found the self-feeder with tankage, mill stuffs and corn available at all times. These Chesters balance their own ration and their activity and sturdiness and their growthiness indicate that they are doing it in ideal fashion. Under this policy of liberal feeding the herd has remained prolific, thus disproving the theory that you have to starve a breeding animal.

It might be proper to ask what occupies the attention of the senior member of this firm, Mr. G. L. Emmert. With Frank tending the cows and Ben the hogs, what important branch is left for the father? Let it be remembered that this 240-acre farm is being forced for all it is worth. A four-year rotation system is followed, so that after taking off one crop of clover, over it goes and back into corn the next year. They, therefore, have two crops of corn, then oats seeded to clover, followed by a meadow one year and back again to corn. This rotation is keeping the land in productive condition, and a 75-bushel corn crop is not unusual. General farming is the hobby of the senior member of this farm, with the boys specializing in dairying and in hog raising, and, in addition, giving much of their time to farm work and outside farming activities. All in all, the plan has worked out admirably

Everybody on the Emmert farm is busy and happy. If the work is strenuous it is agreeable, and everything is being done in a fine spirit. The returns per acre are amazingly large, as they always will be on good land where sensible live stock farming is engaged in and where good, common sense is used in the planning of the crops.

The Wisconsin Farmer

THURSDAY, JANUARY 25, 1917.

FAMILY CIRCLE TALKS BY THE PUBLISHER

WISCONSIN FARMER KEEPS PACE WITH WISCONSIN.

THERE are none of my readers who rejoice more than I do over the wonderful prosperity which has come to Wisconsin farmers during the past year, not only because of increased production, but because of increased prices as well. Statistics are proverbially dry reading, but in reading the figures for Wisconsin's farm wealth the other day I saw behind the plain details on the printed page a scene of prosperous farms, comfortable homes, happy families, splendid herds, and barns and silos bursting with their stores. That is what the figures meant to me as I read that Wisconsin farmers produced field crops and dairy products worth over $410,000,000 last year, which was nearly $80,000,000 more than in 1915, and that Wisconsin ranks first among all the states in the number and value of her dairy cows, in the production and value of rye, in the number of silos, in the production and value of creamery butter and cheese, and in the percentage of farms operated by owners. A vision of unequaled prosperity unfolded itself before me as I noted that dairy cows are kept on nearly 165,000 out of about 170,000 farms, with an average of nine cows to the farm. Then, as I recalled that these cows furnished the material for one-sixth the creamery butter and one-half the cheese of America, and that the prices this year are far in advance of those of a year ago, I realized that peace hath its victories no less than war, for one would have to turn to the tainted wealth of eastern munition factories to equal Wisconsin's farming prosperity this year.

But, fortunately for Wisconsin, her agricultural interests are not all carried in one, or even two or three, baskets; for her farming industry is the most diversified of any in the Union. Not only in dairy, field, garden and fruit products is Wisconsin well to the fore, but her beef cattle and hogs are making her more and more a leading live stock state, with every passing year.

Realizing these things, it is my great ambition that The Wisconsin Farmer shall keep pace with the state's development; and in line with this policy I have added another practical field man to our already large and efficient editorial staff. Mr. Fred A. Koenig, who will devote his entire time to gathering editorial matter of general interest to Wisconsin farmers for these columns, has been closely associated with dairying interests all his life. He received a degree from one of the leading agricultural colleges in the country for special work along dairying and farm journal lines. He has contributed largely to leading dairying publications, and he comes to his permanent work on The Wisconsin Farmer with great faith in Wisconsin and her agricultural supremacy. An expert photographer and a fluent speaker of German, it is my hope that, as he goes about our splendid state with his camera and his editorial note book, he may meet all the leading dairymen and as many of my readers as possible, so that he may reflect their views, present their problems and add practical editorial efficiency and interest to the columns of The Wisconsin Farmer every week.

Mr. Koenig was to have joined The Wisconsin Farmer force some six months ago, but he was one of the soldier boys who responded to the call for the national guard on the Mexican border. Now that his country needs him no longer he is ready to devote his energies and his fine ability to promoting the interests of the readers of The Wisconsin Farmer and of our beloved state. I bespeak for him a friendly reception from those of my thousands of readers with whom he will come in personal contact, and I hope the acquaintances which he forms may lead to a closer relationship between them and myself.

MR. FRED A. KOENIG,
Farm journalist, dairying expert and photographer, who has joined The Wisconsin Farmer editorial staff after service on the Mexican border.

A TRIBUTE TO WISCONSIN.

I FIND many tributes paid to Wisconsin, in the course of my general reading, for no state excels ours in progressiveness, prosperity and the generally advanced position of the people. One of the most interesting of these tributes is to be found in the American Magazine and is from the pen of Ray Stannard Baker, a well-known writer of the day.

Mr. Baker devotes himself more to the political and intellectual progress of Wisconsin than to its agricultural. But just as there are many facets to a diamond, and all are necessary to its brilliancy, so our beloved state is many-sided and would be incomplete if we were to omit a single one. I find myself greatly interested in what Mr. Baker has to say of the advanced position which Wisconsin takes in public thought and affairs. He congratulates our state in this manner:

> Wisconsin is the least partisan, the most fearless-thinking of the states; and its most important contribution to the nation is its hard-wrought political and educational pioneering and experimentation. With it all, Wisconsin is not a radical state; it is too tough-minded, too practical. It wants to go ahead, but to go ahead solidly and cautiously. Wisconsin wants to be certain that all its political reforms are buckled down to real educational and economic ends. And it has the smallest per capita state debt of any Northern state, and no bonded indebtedness whatever.

Much as Wisconsin has already accomplished, Mr. Baker believes she is destined to still greater things. He sees her taking more commanding position in the sisterhood of states, a leader in every branch of thought. Here is the picture he paints at the conclusion of his article:

> A strong, sound, healthy state, she has employed her youthful energies thus far in subduing the virgin forests, opening the mines, developing the commerce of her lakes and rivers, building her roads and cities. She has harnessed her imagination to the creation of institutions in a new land. In that process of hard work and frugal living she has grown strong and clear. One day, she will pause at her task and look up at the stars! One day she will perceive newly the beauty of her surroundings—the little lakes that John Muir played about as a boy and called the "eyes of God," the wonderful wooded valley, the hills and streams and forests of the north, and the wide-rolling farm country of the south; and the marvel of the strange new human amalgam of northern races coming up in a wild and free environment, and eager for the adventure of self-expression. I love Wisconsin, and so I know that one day she will speak out of the depths of her heart.

Can we not all join, with Mr. Baker, in repeating the sentiment with which he closes his tribute:

> I love Wisconsin. Is there a fairer, richer, greater, nobler state in all this broad land than ours? Are there any people anywhere more devoted to progress, more firmly enlinked with a well-deserved prosperity, more Christianly charitable than ours?

I say no, most emphatically; and so I add this thought: Let us stop every little while to pay tribute (humble, though it may be, and perhaps not even by word of mouth, but simply by thankful heartbeat) to the state which means so much and is so dear to us all.

ALL WISCONSIN JOINS IN SINGING "AMERICA."

I TAKE the greatest pleasure imaginable in complying with the numerous requests from readers of The Wisconsin Farmer for copies of "America" printed in slip form. If I can be responsible, in any degree, for thousands upon thousands of farmers in this fair state of ours, lifting up their voices in loving praise to "My Country" and returning thanks to the Giver of all good gifts for the many blessings which we enjoy, I shall feel amply repaid for all the expense and trouble to which I am put to get these slips to all who desire them. In these trying times when trouble might so easily be precipitated, the more we unite in returning thanks to "Our Father's God," for peace, plenty and prosperity, the better for us and all concerned.

I am going to take the liberty to print a few letters from among the many hundreds which I have received, asking for "America," within the last few days. All the letters which I print herewith came to me in the same mail, on the same day, and are characteristic of the many I am receiving.

The first was written by J. B. Cusack, of Kilbourn, Wisconsin, and is as follows:

> Mr. Pierce:—I am a subscriber to The Wisconsin Farmer, read it carefully and like it very much. I certainly hope it is receiving the generous support to which it is entitled. Please send me some extra copies of the national hymn, "America."

I am glad to be able to reassure Mr. Cusack as to the support which the farmers of Wisconsin are giving this paper. We are having the best year of all the twenty-four which the paper has been published by me, and all the sixty-nine which it has been in existence. For this I am duly and deeply thankful to all my good friends throughout our beloved state.

The following letter came to me from Mrs. Wm. Lambrecht, Route 2, Gillett, Wisconsin, and pleased me immensely:

> Dear Mr. Pierce:—Having read of your offer to send printed slips of "America" I enclose stamps for postage, as you are doing enough without paying the postage. Please send three, as each of my children wants one to keep. We are all very well pleased with The Wisconsin Farmer—even the children read it. I thank you for your kindness.

That letter, my friends, made me feel good the whole day. I certainly appreciate such words of praise. "Even the children read it." I am well repaid for every effort which I have put forth to make The Wisconsin Farmer a paper for all the family.

Here is a splendid letter from Mrs. Maude Morey, of Sheridan, Wisconsin, one of the best of the entire lot:

> Dear Mr. Pierce:—I am taking advantage of your kind offer to send "America" on request. I would like to ask you to send enough for the school children in our district. Some of them have song books, though many have not. Possession means much to a child. They have the use of the song books at Sunday school which is held in the schoolhouse during all but the coldest months. From being with them at Sunday school I know your slips would give much pleasure. The Wisconsin Farmer comes to our home regularly.

Whatever I can do for the children is done most willingly, for no one loves them better than I do. I hope every child in the district where Mrs. Morey lives will soon be able to sing all four stanzas of "America" without having to look at the printed slips once, even just a tiny glance.

I want to add just one more letter, which was received from Eddie Block, of Shepley, Wisconsin, as follows:

> Dear Mr. Pierce:—I saw your offer to send copies of "America" and we have decided to sing the song in our Farmers' Club. I would therefore very much appreciate it if you would send me quite a number to my address.

How better could the farmers' club of Shepley, or any other neighborhood, open or conclude its program than by singing "My Country, 'Tis of Thee?" I hope every church society, club, grange, social circle, school, church, Sunday school—in fact, every "get-together" organization of whatever nature in all of Wisconsin—will feel impelled to add "America" to its program of exercises, to the end that the words of the noble hymn may rise to heaven from every quarter of the state. I am deeply in earnest on this subject, my friends. I believe international peace will be restored to this sadly harrowed world of ours sooner than you perhaps may think. Once restored, I believe it will last many, many years; longer than you perhaps may dream.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-in-Chief

The Wisconsin Farmer Madison, Wis.

A Year of Prosperity.

The United States Department of Agriculture, in its December crop estimates, places the aggregate value of the thirteen principal field corps of the country, in 1916, at $7,014,983,000, as compared with $5,332,929,000 in 1915. In other words, the American farmer earned $1,682,054,000 more, from his principal crops, in 1916 than he did in 1915. Surely, there is reason here for great congratulation to all concerned.

But it will never do to sit down and be content with the records of the past. The farmer, who finds his produce bringing better prices today than they have brought any time since the civil war, owes it to himself to make his acres and his herds produce more abundantly this year, and next, than ever before. Any agency which will enable him to accomplish this is deserving of enthusiastic support.

The Wisconsin Farmer is pledged to do everything in its power to maintain and to increase these production and value records of the farmers of this fertile section of the country. We propose to make this paper more valuable, practical, entertaining and instructive this year than ever before. To accomplish this we must have the heartiest support of every reader. Let us repeat our suggestion that every reader of The Wisconsin Farmer, whose subscription has recently expired, or will shortly come to an end, renew without any delay, and that every one of our readers make himself a committee of one to point out the value of this paper to his friends and neighbors and secure us as many new subscribers as possible. By thus working together we can make The Wisconsin Farmer bigger, better and more valuable to every reader in 1917 than ever before, and we can continue our agricultural prosperity, by spreading far and wide, the practical tenets of successful farming, so that the whole nation will prosper. We will do our share; will you do yours, promptly, without any delay whatever?

For a Shorter Legislative Session.

A commendable effort in the Wisconsin legislature to shorten its session, with a consequent saving to the state, has been temporarily sidetracked by referring it to a committee which may put the whole matter quietly to sleep.

The Wisconsin Farmer will be disappointed if the governor and his friends at the state house are unable to accomplish any reform along this line. There are two years between legislative sessions in which to give old laws a thorough trying out and to consider the need for new ones. There is also a period of several weeks between election and the time the general assembly convenes in which members can prepare themselves for their duties. Of course, the necessary preliminaries, such as the organization of the two houses, the appointment of committees and the hiring of help, require some time, but it would seem as though two weeks were certainly sufficient for this.

As a rule, long legislative sessions are due to partisan or factional politics. This year, when the republicans have a large working majority, little time need be lost in partisan divisions. There is no reason why the custom of leaving much important legislation till the closing days should not be discarded this year, and April 1st or earlier be definitely set now as the date of adjournment.

Not only is every unnecessary day added to the length of the session a source of heavy expense to the state, but it is a loss to most of the members of the legislature, who are anxious to be at their personal business affairs. This is especially true of the thirty-one farmer-members of the legislature, whose spring plowing will be calling them by April 1st. If there are others in the general assembly, whose work is not pressing, we would suggest to them that it looks as though there would be a scarcity of farm help this spring and they can serve their state fully as well by going up and down the furrows of our fine fields, as they can by prolonging the legislative session for political purposes.

A short legislative session has commended itself to our sister state of Iowa, where both the governor and the speaker of the house have urged seventy days as a maximum length. Wisconsin, always at the forefront of political reforms, can well afford to make the same effort along this line.

A WELCOME VISITOR.

Farmers Not Alone Responsible.

The farmer gets most of the kicks for the high cost of living and most of those who kick do not seem to take into consideration that the cost of production on the farm is increasing, too. Land values in Wisconsin, according to recent report of the tax commission, have increased from $34 an acre to $66 an acre on the average in ten years. The land is the farmer's plant, and if he has to make a double investment without doubling his acres or producing capacity, it is, of course, much more expensive to produce. If he buys a farm for cash it takes more money, hence he has the loss of interest. If he buys on time he must pay more interest. And in the meantime he is getting no more acres than he did ten years ago at the smaller price.

Then we must also look at other expenses on the farm. In the first place, taxes are higher and the farmer has to pay a good share of the taxes even if he is looked upon as a rather despised individual. The farmer cannot raise everything which he eats, though he has the advantage over the city man in this regard. The staples which he purchases have advanced in price just as much for him as they have advanced for people in town. Labor has advanced for the farmer, just as high a percentage as it has advanced in the industrial centers. The farmer is in need of steel and iron in implements and he has to pay more money for all these things. Those who howl that the farmer must raise more stock and bigger crops so as to help feed the people, must understand that more stock means more labor and machinery and these things are not only very high in price at this time, but they are in many cases hard to get at any price.

So it is not fair at all to charge up the cost of living to the farmer, even though he may be getting better prices for his produce. He must have better prices to keep up with the increased demands on his own purse.

Work For Wisconsin Farmers' Clubs.

At this time of the year our Wisconsin farmers' clubs are most active and we believe they will all be interested in suggestions which Mr. E. L. Luther, superintendent of farmers' institute, has to make. A number of things suggested cannot be done in the winter time, but they can be arranged for and committees and workers named so that the work will be organized when the season for doing it approaches. Here are a few things which Mr. Luther says a farmers' club in Wisconsin may accomplish:

Improve the country cemetary.
Provide better outhouses for the country schools.
Hold clean-up days spring and fall, about premises of each member.
Drag the roads systematically.
Conduct a community fair.
Erect sign boards at corners.
Agitate and enforce Wisconsin dog law.
Improve landscape about community creamery or cheese factory.
Build a community hall.
Make a community exhibit at county fair.
Secure consolidated school and pupil transportation.
Increase the bird population of community.
Secure community growing of crops—that is one variety of potatoes, corn or barley, etc.
Clean up the roadsides.
Club buy and club sell.

This is a very comprehensive list and will give any club sufficient food for thought and grounds for action for some time to come. There are various angles of several of the subjects. It seems we cannot start out to do even one of these things without others are suggested to the workers in the club as they go along.

The writer visited one of our large tire factories recently and found that old tires are very much in demand. Clubs might easily collect these at some place where there is a suitable shed with lock and key and a good watch dog, and when there is a large enough shipment sell the lot either to a local dealer or ship a carload to some factory. Paper is also a commodity which is much in demand these days, and paper may be collected, tied in packages, and when a large quantity of it is on hand, sold at a good price. In almost any county seat town there is a man who will buy tires or paper in carload lots. If any club wishes to take up such work and has no buyer perhaps the editor can put them in touch with some one, and we will surely be glad to help.

A good letter from any of our club-worker readers, outlining the work which they have been doing, and particularly any new ideas, will be very greatly appreciated by the editor.

Wisconsin Farmers' Electric Company.

The first farmers' company to make use of electric current and power from Wisconsin river dam projects is the Sumpter Light & Power Company, organized a few days ago at Prairie du Sac, Sauk county. This company will purchase electric current from one of the big dam companies and sell it out to farmers. The company now has $9,000 capital and, while it will not serve a large number of farmers to begin with, it is expected that the service will become popular and be widely extended. There is talk of another similar company for farmers in the vicinity of Kilbourn, where there is also a power dam project. It does not take a great stretch of imagination to look forward to the time when electric light and power plants will be erected with a capacity not only for the town in which they are located but also for the farmers for miles around. It is said that the great power plant at Keokuk, Iowa, which serves St. Louis with light and power, could easily supply electricity for farmers within a radius of 200 miles. This means that a large part of the farmers in Illinois, Iowa and Missouri could be supplied from this one power plant. Wisconsin is rich in water power and the time is coming when this power will be used to serve the farmers as well as the cities. It is only a question of organizing subsidiary companies to take over the work of running current wires and the smaller feed wires into the homes and other farm buildings. For several years farmers in Cass county, Iowa, have been supplied with electric lights and power furnished them through a company organized on the same basis as a rural telephone line. The power plant at the city of Red Oak has more current than is needed. It has run a strong current wire up through a rich farming community. Farmers along this route may get electric connection when they have a sufficient number of customers for the current.

The farmers for three or four miles along a main road will form a local company to build and operate wires which tap the main feed wires. In several cases the farmers have banded together and taken a certain day or week to string the line of poles needed. Then each man pays for the wiring of his own place, while all share in the up-keep of the feed wires running from the main station into the country. The little company handling the farmers' electric business has regular meetings like a rural telephone company, and regular officers to look after the property and keep it in shape. The service is very satisfactory and is not expensive after the original investment.

Why "Swine Week" in Wisconsin?

In some quarters the question, "Why Swine Week?" may be asked. Well, why not Swine Week? Dairying has been talked in Wisconsin until we think, dream, and figure as well as converse, in terms of cows. Almost everyone knows the "Guernsey Capital of America" and the big Holstein counties, and who it is that cops off

THIS tonic is making me rich," —that is what thousands of users of International Stock Food Tonic are saying every day. These farmers would no more attempt to "get along without it" than they would try to get along without feeding their animals their regular grain.

International Stock Food Tonic saves money in feed. It puts more flesh on their hogs—increases the milk flow of their cows—and gives their horses greater strength and vitality—all at a big saving in regular grain feed.

What these farmers, located in all sections of the country and working under all conditions, can do—you can do also. If International Stock Food Tonic had not been a money saver to those who use it, it would not have withstood the test of time for twenty-seven years.

International Stock Food Tonic will help you make greater profits. You can raise larger, healthier pigs, shoats, hogs, sheep and cattle—You can get them on the market at least 30 days earlier—You can get more milk from your cows—You can get more work from your horses—Above all,—you can save money and make more money.

Why Your Stock Need International Stock Food Tonic

International Stock Food Tonic is based on the laws of Nature.

It is just a common-sense mixture in the proper proportion of the roots, herbs, barks and seeds which Nature provided to safeguard the health of animals.

One by one, these ingredients have been taken away from the animals through domestication.

When anything that Nature has provided is taken away, it must be supplied. International Stock Food Tonic does this, supplying these necessary elements in concentrated form and in just the proper proportions.

International Stock Food Tonic prevents the waste of grain passing through the system unassimilated. With it, more grain goes into flesh, bone and muscle. That is why it helps to keep farm animals in a healthier, thriftier condition by aiding digestion and the promotion of proper assimilation.

Save ⅓ of Your Feed Bill

Reports from farmers for many years show that three quarts of oats with International Stock Food Tonic will keep stock in better condition than four quarts of oats without it. International Stock Food Tonic gives to your horses greater strength and endurance with a big saving in grain. Many users of International Stock Food Tonic find that it increases the milk flow from their cows two to four quarts a day. And when you feed it to your hogs, you can see the grain you give them go right into extra weight.

The amount of high priced grain feed given to hogs matters little unless they digest and assimilate it. When you raise hogs, raise BIG ones. International Stock Food Tonic will help you do it.

You Can Make Greater Profit Too

Read what Mr. A. K. Campbell of Bainbridge, Indiana, says about fattening hogs with International Stock Food Tonic:

"I have an old sow which shows the results of using International Stock Food Tonic. This sow **gained 400 pounds in 100 days.** I gave her about 75 cents worth of International Stock Food Tonic and 30 bushels of corn with some slop. I made over 200%. How is that for profit? One of my neighbors gave me the sow because he thought she would die within a week. She could not walk to my place, a distance of 1½ miles and I had to haul her. I never saw or heard of any Stock Food Tonic having such great value as a **conditioner** and **fattener.**"

This is just one of thousands of similar letters which come to us unsolicited daily. Experience makes us sure that **you** can make more money by using International Stock Food Tonic.

Stop Losing Money

Do you realize that the farmers of the United States lost last year $168,089,110 in horses, cows and hogs? According to the annual report of the United States Department of Agriculture, the average weight of hogs decreased 12 pounds or $1.47 a head. Think of it! $1.47 lost on every hog—a total of $100,089,110 lost forever on account of improper care. Horses decreased in value $1.73 a head—a total of $31,442,840.

The farmers of the United States can't stand such a loss this coming year. **You** can't stand it with all expenses going up. You must make more out of your stock. International Stock Food Tonic will help you.

Order International Stock Food Tonic From Your Dealer

Make more money this year. Order International Stock Food Tonic from your dealer today. Telephone him now.

Every $3.50 spent for International Stock Food Tonic will save you $7.00 in feed. If your dealer can't supply you write us. Do it today.

International Live Stock Guide FREE

To make this your most profitable stock year, we have had the leading stock experts in the country prepare the International Live Stock Guide. This handy easy reference should be in your hands.

There are few questions which may come up in relation to live stock on your farm which the Guide won't answer.

The Guide is indexed with unusual care. Keep it handy where you can refer to it in an emergency and where you can find it to study in the evenings. The International Live Stock Guide contains pointers for every owner of stock and poultry.

The contributors to the International Live Stock Guide have spent their lives studying stock. Some of them are members of the staffs of the leading farm papers in the United States.

Send for a copy of the International Live Stock Guide Book today. We have a limited edition which we will send free to the first who write.

The supply of the Guide may be exhausted. Send in the coupon at the bottom of this advertisement immediately. Be sure to fill out all the blanks. Just clip off the coupon or tear it out. Write your name and address in the space given—Then mail it at once and the International Live Stock Guide is yours by return mail.

the big prizes on Ayrshires, and Brown Swiss, and Jerseys at the state and national shows.

But who will tell us what county is first in hog raising, or the production of beef cattle? Tell us offhand without looking in the census reports or the reports of the state department of agriculture. A few farmers in this state have made a name for themselves by producing swine, sheep and beef cattle, and a good many more have made good money in these branches of live stock and said very little about it.

Hogs and cows can be raised on the same farm. Some men can make more money out of beef cattle than they can out of dairying. Others are best adapted to sheep. There is great room for expansion along all these lines, as well as in dairying. The Wisconsin Farmer does not minimize the importance of dairying, nor do we expect to let up on discussion of dairy subjects. But we believe a "Swine Week" is eminently proper and fitting, and that the hog has a place in the agricultural economy of the state which not even the dairy cow should be permitted to displace.

The farm is the nation's source of food, but Uncle Sam hasn't gone to a vegetable or milk diet by any means as yet. There is a big market for beef and pork and mutton. The number of beef cattle is not increasing as rapidly as the population in this country. The same grass which is good for dairy cows is good for beef cows, and you never saw any animals happier than hogs in alfalfa. Corn is high priced, but it sells at its highest price when marketed on foot through a well-bred hog or steer. A few farmers who have had the right vision have been selling corn for $1 a bushel for several years, while the balance of us have been getting 50 cents.

We expect to see a big revival of the hog business in Wisconsin in the next few years. Not of the razorbacks, but of the well-bred and scientifically fed hog.

A big increase in number of good hogs and good beef cattle in this state will not injure the dairy business a particle. Take the cue from "Swine Week" February 5th-10th, and look around for some good stock to start a herd.

Better Products For Creameries.

The problem of how to secure a better grade of cream in order that a better quality of butter may be marketed and greater returns made to the farmer has been successfully solved by the creamery managers of La Crosse county and the manager of the Sparta creamery in Monroe county.

The Holmen and West Salem creameries are among the largest creameries in Wisconsin and, while the quality of butter sold has been above the average, it did not satisfy the wide-awake managers, Val Keppel, of Holmen, and J. H. Moran, of West Salem. For years both of these gentlemen have been keen students of milk production, creamery methods and butter marketing. They saw that if their patrons would send a better quality of cream throughout the year that much more could be paid for a pound of butter due to the increased price received for better butter. They also saw that it was not fair to the man producing an excellent quality of cream throughout the year to be held down and to have his profits lowered by a few men who would not make an honest effort to deliver better cream. As a result, the idea of an extension instructor to go among the farmers and demonstrate the good methods of producing milk and handling it after being produced was conceived.

Early in the year 1915 the creamery managers were called together and, after careful consideration of the question before them, they decided to try the plan for one year. In May of the same year the plan went into force, but Mr. E. M. Jackson was not hired until August and did not get to work until October 15, 1915.

Mr. Jackson is an ideal man for this position. For five years he worked in the West Salem creamery. Before this time he spent his early life on a farm in Jackson county. With a splendid training for the work, a strong personality and an abundance of good common sense, the success he has made of the work was assured. Mr. Jackson's report to the buttermakers of Wisconsin covering his activities in La Crosse county will be found in a special signed article which appears in this issue of The Wisconsin Farmer.

Mr. Jackson's territory is large and hard to travel, but with the aid of a car he has worked among 1,500 farmers the past year in the interest of better dairying. In his territory more than 15,000 cows are owned. As a result of his work farmers are remodeling their barns, building milk houses and feeding more intelligently. He is performing a big missionary work.

Likes the Wisconsin Farmer Best.

The publisher is in receipt of a letter from T. P. Scannell, Fond du Lac county, Wisconsin, and we take the liberty of quoting some very encouraging words from this letter:

I have read The Wisconsin Farmer for a number of years and do not want to miss a copy of the paper now. So I am enclosing you my subscription for three years. I have taken different farm papers, but I like The Wisconsin Farmer the best. We have been breeding registered Durocs for the past five years and The Wisconsin Farmer has been a great help along that line.

This is just a sample of many letters which come to cheer the heart of the publisher and enthuse the editors to give their best efforts to make The Wisconsin Farmer a better farm paper. Mr. Scannell is located in a very rich farming district in Fond du Lac county, quite properly named Eden, for it is indeed a garden spot. The Wisconsin Farmer has a larger circulation in Fond du Lac county than any other farm paper, and it is certainly very encouraging to have such a good letter from one of our regular readers in this splendid territory.

Attend Wisconsin Breeders Meetings.

It is important that each of the breeds represented in Wisconsin in the live stock industry have a good turn-out at the annual meetings to be held in Madison, Swine Week, or Farmers' Week, February 5th-10th.

The Wisconsin Farmer has received letters from a number of the officers of Wisconsin live stock associations asking us to make special announcement of these meetings and for the benefit of our readers we give herewith a list of the meetings with the dates when each will be held:

February 5th, 3:30 p. m.—Wisconsin Sheep Breeders' Association, Wisconsin Aberdeen Angus Breeders' Association, Wisconsin Hereford Breeders' Association, Wisconsin Short-horn Breeders' Association, Wisconsin Red Polled Cattle Club.

February 6th, 4 p. m.—Wisconsin Berkshire Breeders' Association, Wisconsin Chester White Breeders' Association, Wisconsin Duroc Jersey Breeders' Association, Wisconsin Hampshire Breeders' Association, Wisconsin Poland China Breeders' Association.

February 7th, 11:30 a. m.—Wisconsin Horse Breeders' Association.

February 8th, 3 p. m.—Wisconsin Ayrshire Breeders' Association, Wisconsin Brown Swiss Breeders' Association, Western Guernsey Breeders' Association, Wisconsin Holstein Breeders' Association, Wisconsin Jersey Breeders' Association.

All of the meetings will be held at the college of agriculture, Madison. These meetings will occupy but a portion of each day and there will be opportunity to spend the balance of the time listening to some of the good addresses which are a part of the Farmers' Week program.

Handling a Thin Meadow.

One of our subscribers, Mr. L. D. Hampton, of a neighbor state, asks for information about the handling of a clover field where there is about half a stand. This field was seeded in the spring of 1916 and the problem that is puzzling Mr. Hampton is whether it should be seeded to oats again or is it worth while to try to supplement the present stand by the use of more seed. He asks if the preparation of the seed bed for oats will destroy clover that is already there.

As clover seed has been high in price for several years the failure of a crop involves the owner in considerable loss. As a rule, the best plan is to start all over again when there is but half a stand and in this particular case we would not hesitate to advise disking the surface thoroughly in the spring, sowing oats as a nurse crop and using the customary amount of seed. A mixture of four quarts of clover and four quarts of timothy will produce a good stand if conditions are favorable. If it is the intention to leave it meadow only for a year or two then more clover and less timothy should be seeded, but where two crops of hay are to be taken and the field afterwards pastured the half-and-half mixture will give good results.

There is one way by which a half stand of clover may be saved, but this can be carried out only where the owner is in position to pasture it. In that case use a little more fresh seed this spring and give the surface a good harrowing just as soon as the soil will work well. It is quite likely that the crop is killed out in spots so that it will not be necessary to seed over the thick patches. Where this plan is followed it is generally advisable to sow three or four pecks of oats per acre before harrowing. This will thicken up the meadow and in addition to furnishing considerable good pasture the oats will check weed growth and they will also protect the tender clover and timothy plants.

Advise Against Haste With Hemp.

Some of our agricultural experiment workers have been obliged to back up on the proposition of raising hemp in Wisconsin, at least in so far as such a crop is practical for the average farm. There are very few farmers in the state who can raise hemp profitably, no matter how big a crop they may get. The facts concerning hemp were given in The Wisconsin Farmer almost a year ago, and these were the result of a rather extensive investigation carried on by C. P. Norgord, of the Wisconsin Department of Agriculture.

If any of our readers have been led into the idea that they can produce big crops of hemp and get an average of "$100 per acre, etc.," they had just as well drop the notion now. Hemp will grow well in many places in Wisconsin and will yield well, but it is a community proposition and not applicable to the individual or isolated farm. Expensive machinery is necessary for breaking the fiber, and this cannot be provided with profit for the individual farm, or even for a few farms. This is pointed out very clearly in a recent statement issued from the Wisconsin Experiment Station, which has conducted tests on hemp growing in the state for several years. Before a Wisconsin farmer thinks of going into hemp he should see that there are a large number of farmers in his neighborhood who will devote time and land to the same crop, and that there will be a sufficient yield in his neighborhood to warrant the purchase of machinery necessary for getting the crop ready for market.

Almost any farmer in the state could raise some tobacco—at least any farmer in the southern half of the state But if he were the only farmer in his neighborhood raising tobacco he might have a hard time marketing his product. At least the buyers would not be running out after his crop, even though it were a large one and the manufacturers would not feel justified in establishing a warehouse in his neighborhood to handle his individual crop.

Tobacco is grown successfully and with big profits in the centers where a considerable area is devoted to the crop. And the prospect of a big yield from many farms attracts the buyers and makes the market good. Hemp is far less likely to be a profitable crop than tobacco, because of the more expensive methods which are necessary for preparing it for the market. The time may come when there are several neighborhoods in Wisconsin which will raise hemp and make profits, but hemp is not likely to be a general crop, and the average farmer in this state had better devote his energies to thinking of other things.

"Standard"
Plumbing Fixtures
for
Bath Room
Kitchen
Laundry

A "Standard" bathroom in your home adds to your health and comfort.

"Standard" Plumbing Fixtures have been standard in American homes for many years. They represent a big variety for every use—for bathrooms, kitchens and home laundries.

Installing "Standard" fixtures not only means getting the equipment that is backed by experience and service—it means that your home is fitted with plumbing conveniences that are so well known and highly thought of as to add to the value of any property in which they are placed.

If equipped with running water in your home—or if planning to install a water system—by all means see to it that your plumbing is "Standard"—the line best known, backed by the company best equipped to serve.

WRITE FOR FREE COPIES OF THESE BOOKS

They contain a lot of helpful information for use in putting in plumbing fixtures. Model bathroom installations are shown—all reasonable in cost when superior quality and appearance are considered. Good plumbing is a comfort necessity that should have a place in every home.

"Standard" plumbing leads. Find out about it now—whether you intend to build or remodel today, or whether your plans are still indefinite. Most Plumbers sell "Standard" Plumbing Fixtures. Talk to some nearby Plumber about "Standard"—but by all means let us send you the booklets shown here. Use the coupon—send it today.

Guernsey Breeders' Meeting

The eleventh annual meeting of the Waukesha County Guernsey Breeders' Association, held at Resthaven Hotel, Waukesha, January 18th, still further emphasizes the growing popularity of this great breed of dairy cattle. More than 200 persons, including breeders and their families, sat down to an excellent banquet served at noon and listened to a fine program of addresses in the afternoon. President Gavin McKerrow was in his happiest mood and presided over the deliberations of the meeting in a most satisfactory manner. This association, according to the records of F. E. Fox, secretary-treasurer, carried on a total business amounting to over $46,000 last year. Accurate and detailed reports of all the receipts and expenditures were given by Mr. Fox and he was highly complimented for the splendid work which he has done as secretary. This association is governed by a president, secretary-treasurer and nine directors. In the past year the directors have held nineteen meetings and there has been an average attendance of seven directors. This shows in a large measure why the association is such a great success. The officers and members are not afraid to take off their coats and work for the good of their association and for the advancement of the Guernsey breed. A year ago the secretary-treasurer reported $790.40 on hand in the treasury and the report just issued shows $1,352.49, almost double. The officers of the association are elected by the board of directors. The term of Messrs. Gavin McKerrow, Earl Roberts and John H. Williams expired this year and they were re-elected for another three years. One may get some idea of the magnitude of the work of this association from the fact that in the past year the secretary has sent out 5,760 letters and post cards, of which 4,048 were personal letters. More than 1,100 return postals were sent to members asking for information concerning the stock they have for sale. The association has almost 150 paid-up members at this time and this is the largest list of breeder-members in its history. There are usually 200 to 300 people at the winter meetings of this association and about 500 at the big summer meeting and picnic which is held on some member's farm. One important feature of the sale business of this association is that about one-third of all the stock sold goes back to Waukesha county farms While the breeders are producing for the best herds of the country, they are also looking out for themselves, and the fact that they have confidence in the stock raised in their own neighborhood is a very high testimonial to the character of this stock There were 235 animals sold in the sales held by this association last season, and eighty-seven, more than a third, were bought by Waukesha county people. In the past year the secretary has issued 23,900 association envelopes to members, and around 6,000 association letterheads. These envelopes go through the mails to all parts of the dairy world, and are considered a good advertisement. They, of course, carry the slogan "Waukesha County Is the Guernsey Capital of America." The association has decided to take up cow testing and to interest as many members as possible in this work.

Among the speakers at the meeting last week were Prof. H. C. Searles, of Fond du Lac, on the subject of "Cow Testing;" W. E. Skinner, of Chicago, on "The Work of the National Dairy Council," and Prof. E. L. Luther, superintendent of Wisconsin Farmers' Institutes and the state county agricultural representative work. The National Dairy Council, as shown by Mr. Skinner, who is one of the old show men of the country both in the beef and dairy business, to be trying to educate the people to understand the nutritive properties of milk. He said that advertising and salesmanship has made it possible to sell beer at a quarter a quart, and that in comparison milk would be decidedly cheap at the same figure. Even when milk is increased in price to a fair basis where the dairyman and the dealer can make a good living out of it, it is still much cheaper than almost any other article of food containing the same nutritive values. Mr. Skinner brought a message of optimism for the milk producer. Professor Searles shows the value of the cow-testing work. It has been found that there is a market for cows which have association records at better prices than those which can show no records. Professor Luther's message was filled with encouragement for future business from the great new empire in Upper Wisconsin. Professor Luther is enthused with this subject and incidentally has accomplished a great work in helping, through the county agent system, this wonderful northern country which is the greatest factor by far in the future greatness of Wisconsin, especially along dairy lines.

JOHN DEERE IMPLEMENTS

BOOK FREE 156 page reference book—tells all about a complete line of farm implements and how to adjust and use many of them. A practical encyclopedia of farm implements. Worth dollars.

Describes and illustrates Plows for Tractors; Walking and Riding Plows; Disc Plows; Cultivators; Spring Tooth and Spike Tooth Harrows; Disc Harrows; Alfalfa and Beet Tools; Farm and Mountain Wagons; Manure Spreaders; Inside Cup and Portable Grain Elevators; Corn Shellers; Hay Loaders; Stackers; Rakes; Mowers and Side Delivery Rakes; Hay Presses; Kaffir Headers; Grain Drills; Seeders; Grain and Corn Binders.

This book will be sent free to everyone stating what implements he is interested in and asking for Package No. X-64.

JOHN DEERE, MOLINE, ILL.

Van Brunt Broadcast Seeder and Cultivator

This is the oldest type of Van Brunt seeding machines.

The wood and iron construction has been replaced by steel and malleable iron. The famous Van Brunt adjustable gate force feed scatters every kind of small grain evenly on the soil without bunching, and the seed is covered by the cultivator teeth.

The tooth bars are equipped with spring-trip teeth. When the teeth strike an obstruction they spring back—are pulled over it—and then return to place.

The Van Brunt Broadcast Seeder and Cultivator handles any small grain.

Van Brunt adjustable gate force feed—even sowing always certain.

Independent tooth bars.

Teeth are soft-centered steel, tempered and guaranteed to scour. They are bolted in place and are reversible to double the wearing period. They can be adjusted to cultivate deep or shallow. Spring-trip is adjustable.

Sizes—12, 14, 16, 18, 22 and 24 bars, 6 inches apart.

John Deere Corn Planters

Accuracy in a corn planter means uniform drop—number of kernels the same in each and every hill.

If the planter misses only six kernels in every 100 hills, the loss in yield is nearly two bushels per acre.

Accuracy in planting has been the main object in designing John Deere planters. One of the many advantages of using a John Deere planter is that with proper handling it will plant practically 2, 3 or 4 kernels in every hill, as desired.

John Deere No. 999 is accurate. It has the John Deere *Natural Cell Fill, Edge Delivery Seed Plate.* Surface of hopper bottom and openings to seed cells are oblique, or sloping. Kernels move toward and enter the cells in their natural position. They do not have to be tipped on edge.

Merely move foot lever to change number of kernels per hill.

Drilling distances varied, and change hilling to drilling or back to hilling made easily.

John Deere Plows for Light Tractors

So far as quality of John Deere Plows for Light Tractors is concerned they are built for the farmer who realizes that it is business judgment to buy a high-grade tractor plow. Don't forget that a tractor plow is not an everyday purchase.

John Deere Plows for Light Tractors are noted for their high-grade work in the field—the real test of tractor plow value.

Before you make your purchase, be sure to see John Deere Plows for Light Tractors. A careful purchase means permanent saving.

High and Level Lift. Two, three and four bottoms.

High and level lift means level plows out of the ground, no cutting of ridges when crossing or turning on plowed ground.

Steady running furrow wheel—does not drag or bind against furrow wall.

Stiff hitch—plow can be backed.

John Deere bottoms, the standard for over 78 years. There is a John Deere bottom for every kind of soil.

Equipped with John Deere Quick Detachable Shares—great labor and time savers.

THE JOHN DEERE TRADE MARK

To designate and brand their goods, "Deere & Company," use the "leaping deer" trade mark. It is the best known implement trade mark in the world.

The reason that it is so well known is because of the high quality of the implements themselves.

Prestige in farm implements is obtained solely through the superior merits of the goods.

The permanent prestige of John Deere implements has been maintained by the company's strict adherence to principles of manufacture that originally made the goods popular.

The "leaping deer" trade mark is Deere & Company's stamp of approval. It distinguishes John Deere Implements from inferior goods. It means that the implement was made in a John Deere factory, in the John Deere way. It is a guarantee of satisfaction and an insurance policy against disappointment.

Look for the John Deere trade mark when you buy.

JOHN DEERE, MOLINE, ILLINOIS

Underhill Association.

To the Editor:—During the month of December there were 302 cows tested in our association, and of this number three produced over forty pounds of butter fat. The highest cow, a grade Guernsey belonging to Paul Drucksey, of Underhill, produced 1,206 pounds of 5.3 per cent milk, or 53.1 pounds of butter fat. The highest herd was one of nine grade Guernseys belonging to George Schuman. They averaged 406.6 pounds of milk and 22.2 pounds of butter fat. We have bought two registered bulls and gotten rid of four more cows which didn't pay, making a total of thirty-five cows sent to the block by members of this association.

C. M. Rydberg, Tester,
Shawano County Association.

Don't Neglect the Horse.

"Balanced rations and food mixtures for the dairy cow and the feeding steer are carefully examined and discussed, but the feeding of the horse is usually all the hay they can eat and varying quantities of corn or oats, according to the work being done," says W. L. Blizzard, of the department of animal husbandry of the Oklahoma Agricultural College.

"If a horse is required to do extra hard work he should be liberally and frequently fed," said Mr. Blizzard. "The amount of feed given should be regulated by the size of the horse and by the amount and kind of work he is required to do. The horse has a small stomach in proportion to his size; hence, frequent feeding when under hard work is necessary.

"Bran added to a grain ration of either corn or oats will increase its efficiency, and it will also keep the digestive system in a more healthy condition. A little sprinkling of oil meal to this ration will be helpful in keeping the horse in a more healthful condition. When fed with bran it has the desirable effect of keeping the horse from becoming hidebound; it also adds gloss to the hair.

"No colt or horse of any age will grow, develop and put on flesh when the flesh is hard and the skin 'tight or hidebound.'

"Too much hay is often fed to horses. It is not necessary for a horse to gorge himself with hay; a good, liberal allowance is sufficient, and is more beneficial than too much. Dusty or moldy hay should not be fed, as it is apt to cause digestive disorders."

Oregon is planning to copy Wisconsin's Farm Management organization, and Mr. D. H. Otis, who has charge of the work in this state, has been invited to take part in the far western state's Farmers' Week this year.

Comfort Makes More Pork and Profit.

Types of Comfortable and, as a Rule, Inexpensive Hog Houses Found Upon Wisconsin Farms—Housing an Important Part of Swine-Raising Program.

A WELL-LIGHTED WALWORTH COUNTY FEED AND FARROWING PEN.

HOG HOUSE ON EXPERIMENT STATION FARM HAS CENTRAL DRIVEWAY.

THE A-shaped portable hog house is easiest and cheapest to construct and is more durable than other shapes. It can be moved about the feeding lot or pasture on its joists, which serve as runners.

Many prefer shed roof hog house to the A-shaped pen. It. too, can be moved about the field on runners. Temporary shade can be provided by means of a cheaply constructed umbrella-like attachment. See it at Wisconsin Swine Week, Madison, Feb. 5th-10th.

Wisconsin swine breeders who annually hold mid-winter sales have sale pavilions which during the year are used as feeding floors, farrowing houses and store rooms.

A field pen is usually provided with a hinged roof-door to make cleaning and bedding easier.

Every breeder of swine should look into the merits of these individual houses. They are inexpensive, may be warmed quickly by using hot bricks at farrowing time, and they admirably fit into the scheme by which each litter is kept by itself. It is entirely practicable to place one of these houses in a half-acre lot so that the sow and her litter may be cared for by themselves, thereby eliminating wholesale robbery which takes place when too many pigs are allowed to run together.

THE COMBINATION GRANARY AND HOG HOUSE.

THIS SHED ROOF HOG HOUSE PROVIDES PERMANENT QUARTERS.

Fortunes in Stumps

NEIGHBORS—land owners—all who are after the money from the soil, **Get My Special Offer Now.** I'll show you how to snake out the stumps. My book is full of live information. 25 years' experience boiled down. The plain unvarnished truth set forth in a plain, simple way. There is money in it for you. **Read the truth.**

HERCULES TRIPLE POWER PORTABLE STUMP PULLER

King of The Stump Fields—A New Record-Smashing Offer For You Now.

Let's talk horse sense and get on the right track. Write to me. I want to tell you how to make your acres produce double profits.

Hercules is the King of all Stump Pullers and always has been king.

Because it was the first all-steel puller ever built.

The first to introduce the grooved device that all others have had to copy.

The first to introduce the double safety catch.

First and today the only real triple power puller.

First and still the only Portable Puller.

Get the book. Read our extraordinary proposition. The Hercules is the puller that has the single, double and triple power features, giving you three machines in one. One man with a team can handle it and move it from place to place. No heavy lifting. It is the real One-Man Puller.

The new Portable is equipped with a solid steel bedplate and broad steel wheels. There isn't a land clearing job in the country but that can be done cheapest and quickest the Hercules Way.

It's the low-down constructed puller that has self-anchoring and stump-achoring features—the one with double safety ratchets that insure the absolute safety of men and team. I want to send you a Hercules on

30 Days' Free Trial

so you can see how **powerful** it is and how **easy it works.** I want you to **know** for yourself that the all-steel construction means 60 per cent less weight and 400 per cent greater strength than cast-iron or "semi-steel." Besides that, I want to save you big money on the cost. I'm making you a brand new offer now.

Unlimited Guarantee

I mean that. When you buy a Hercules I don't fuss or quibble with you. I make a signed and sealed guarantee to you that has no limit of time to it. I can do this because the Hercules is so extraordinarily strong and well built that no job is too tough for it. Write and see.

Bateman's New Special Reheat Treatment Steel in Every New HERCULES

Read about it in a special circular just issued. It has enabled us to make the broadest, most amazing guarantee ever heard of. Again the Hercules has smashed all records.

Get My Special Offer Now

If I get **one** of my new Hercules Machines in each locality, **more will surely follow** because of Hercules quality and efficiency—that's my experience. So I can easily afford to sacrifice my profit on the first machine in each locality. Take advantage of the big profit and big saving opportunity **now.**

Send for Free Book and Special Proposition That Explains My Unlimited Guarantee--This Free Book Tells All

Just simply send your name and address on the coupon or on a postal so I can send you the convincing facts about the superiority and efficiency and value of this wonderful new Hercules Stump Puller.

Only 1000 of these machines will be sold at this remarkable introductory price, so get your name in now.

My new book is a beauty. See the real pictures of big stumps it has pulled out like you would pull weeds.

Read the many interesting letters from farmers, lumbermen and land promoters. Stumps, stumps, stumps, pulled out quick, making fortunes for owners of Hercules Stump Pullers.

I want you to know the facts. Just mail coupon or postal **now.** I'll send the book and price by return mail. I'll tell you the best crops to raise on virgin land where stumps were before.

I simply want to get my free book to you at once, so that you can read the remarkable facts about the Hercules All-Steel Triple Power Stump Puller and how it does such splendid work, making big profits for owners everywhere.

A New Help For the Dairyman.

How La Crosse County Creameries Are Trying to Improve Their Raw Material and Make More Money For the Farmer—By E. M. Jackson.

THE creameries of La Crosse river valley, consisting of Sparta, Rockland, New Berg Corners, Bangor, Barre Mills, Holmen and West Salem, realizing that the dairyman was not improving the quality of his cream rapidly enough to meet the demands of the consumer, formed an organization and called it the Association Co-operative Creameries of La Crosse River Valley.

It was then decided that a man should be hired to visit the patrons of the different creameries and educate them as to the importance and how to produce a better quality of cream, and I was chosen for this position which certainly gives me a great opportunity for doing good.

I will try to explain how we are bettering the quality of our raw materials in this way, classing the dairyman in three classes: 1—the good dairyman; 2—the ordinary dairyman; 3—the poor dairyman.

1. The good dairyman is a patron who is trying to do his best, keeps his cows clean, feeds them good, wholesome food; washes and scalds his utensils after each skimming, keeps his barn clean, well lighted and ventilated and then takes the best care of his cream he knows how until it is delivered to the creamery. In other words, he takes an interest in dairying. I find that when I visit the good dairyman he wants to know if there is any way in which he can better his conditions.

2. The ordinary dairyman is milking cows because this is one way of making money on the farm. He means well. Possibly there is another part of the farming he takes more interest in. Nobody has said anything to him about the importance of producing a high-quality cream and so he has not been trying to produce a better cream. When his faults are pointed out to him he will admit them and is willing to remedy them as soon as it is convenient. In some cases it takes quite a while where they have to build an ice house or separator room. Possibly he has not the money and doesn't want to borrow it. He may be a renter and it would hardly be fair to expect him to make permanent improvements and then in a year or so have to move away and leave them. It is then necessary for me to get in touch with the owner.

3. The poor dairyman is producing his cream in the easiest way possible and does not care in what shape it is delivered to the creamery. He rinses his separator at night and washes it in the morning when through separating. He may be busy in the morning and the separator will not be washed until the next day. He may leave his cream stand in the separator and skim his warm cream into the previous skimming. He may have a spring a few rods from the house, but rather than carry the cream to the spring he will set it in a tub of water and change the water whenever he thinks of it or doesn't happen to be busy, or puts it in a poorly ventilated cellar. When his faults are pointed out to him it goes against his grain. He will say he has sold cream for fifteen, twenty or thirty years and nobody has ever complained of the quality of the cream and I have no reason to. He may not admit that what I have told him is true on the first visit.

On making another visit some time later I find that in most cases what I have told him is commencing to take root and he is a more pleasant man to talk to. Again on a return visit I have found other dairymen that do not show any signs of improvement and don't talk as if they were going to improve. It has been necessary in these cases to call a state inspector and have the law laid down to them. I find that as a last resort this will make them come to time.

In all three classes of dairymen I find that some suggestions can be given to a more or less extent. We are asking the dairymen to keep their barns remarkably well lighted and ventilated and keep them whitewashed. I find that it is an easy matter to convince them that whitewash is an important part of cleanliness. Those having wooden floors are willing to put in cement as soon as the old ones give out. I have urged those having separators in the barn to build a room outside and also tell them that it is against the law to keep the separator in the barn. The biggest opposition I meet here is that it is too cold outside for the separator in the winter. By taking the utensils to the house at night and washing them this is overcome.

E. M. JACKSON, LA CROSSE COUNTY. He is helping to establish a closer relationship between farmers and creameries.

I have urged those living a reasonable distance from a pond or river to put up ice and those not having that chance to arrange so that all of the water pumped to the stock will pass through a cooling tank for the cream first. During the winter some of the dairymen have been keeping the cream in the kitchen, not knowing where else to keep it from freezing. Those having a spring have not that trouble. Those that have a tank with water passing through every day can by insulating the tank with sawdust keep the cream in there all winter. Those having an ice tank can be placing a can of hot water in the tank in the coldest nights and keep the cream in there all winter. During the summer some dairymen keep their cream in the cellars. I have urged them to either use ice or water for cooling.

I have found that a common place for finding old particles of cream is in faulty seams, some of them due to the factories not soldering their seam flush with the rest of the can and the dairyman not soldering the seams when they break open. This has been the cause of considerable poor cream.

All of these troubles are not remedied at once. On my trip through my territory I notice from time to time a new milk house or ice house going up and this can be used as a leverage on the fellow that is backward about improving his. I ask those not up to the standard to go with me to some place that is and let them see for themselves how the up-to-date dairyman is doing things.

We are troubled with a good many dairymen having low tests. Some of them think they get more out of their cream by doing so; others think that the man doing the testing will not give them their accurate tests. I then take a sample of their cream and take them to the creamery and test the sample before their eyes and let them see for themselves.

Most of the creameries in the association have a system of charging the patrons for hauling according to the

SAFEGUARD your stock, tools, hay and grain. The farmer needs fire protection even more than the city dweller. Most of the great "skyscrapers" of America are fireproofed with Natco Hollow Tile. Fireproof your farm the same way. Natco Barns need practically no repairs—age and weather-proof. The Hollow Tile walls do not hold moisture or odors. Dead-air spaces prevent sudden changes in temperature. And the cost—but a trifle more than frame construction. You will soon save the difference in reduced insurance, coal and repair bills.

Build with Natco Hollow Tile

Corn cribs, milk houses, garages, poultry houses, etc., may be made fireproof and permanent with Natco Hollow Tile.

Send for our new book "Natco on the Farm." Fully illustrated from photographs. Tell us what you plan to build. We have many farm building plans to submit and will help you—*free*.

Natco Imperishable Silo is the ideal silage preserver. The glazed hollow tile walls are moisture and acid-proof and fire-resisting. Stoutly reinforced with steel bands laid in mortar. No hoops to tighten. Any mason can erect a Natco. Fully guaranteed. Truly, "The Silo that Lasts for Generations."

Write *today* for our book, "Natco on the Farm," also ask for Silo Catalog.

DAIRY ASSOCIATION CO.
Lyndonville, Vt.

BAG BALM

MADE BY THE KOW-KURE PEOPLE

number of pounds of cream delivered. For instance, hauling costs 30 cents per 100 pounds of cream; one man sends 100 pounds of cream testing 50 per cent butter fat and another sends 100 pounds of cream testing 15 per cent butter fat. It costs the patron with the 30 per cent butter fat 1 cent per pound of fat to have it hauled, while it costs the patron with the 15 per cent cream 2 cents per pound of butter fat. This is used as an argument against thin cream. Besides he has more skim milk to feed the hogs and calves, less cream to cool and it keeps better.

The patrons knowing that somebody is coming around to look over their dairies has a tendency to make them keep things in better shape so they will not be ashamed to have him look them over.

The association is practically in its infancy now. We have other problems that we intend to work out in the future, one in particular—the long routes which some of the cream has to travel over before reaching the creamery. Just what course will be taken has not been decided on at present. We also intend to work out a plan so that all the supplies of the different creameries can be bought as one and the butter sold on the same plan.

Briefly stated, we are trying in a friendly way to point out to the dairyman his shortcomings and at the same time educate him to that point where he will understand the importance of furnishing a pure and wholesome product, thereby increasing his profit in addition to his having the satisfaction of knowing that his efforts and product will stand whatever comparison they are called upon to meet.

Holstein Calf Brings $21,500.

A new world's record price for a bull calf at public sale was established when J. G. Von Herberg, of Lodge Von Heim, Kent, Washington, paid $21,500 for Finderne Mutual Fayne Valdessa, a ten-months-old Holstein-Friesian bull calf, at the Portland (Oregon) Sixth International Live Stock Exhibit, Friday, December 8th.

The buying of Finderne Mutual Fayne Valdessa was not a two-handed affair. More than a half dozen breeders came to the sale for the express purpose of buying this bull. When he was led into the tent the buzz around the ring quieted in anticipation of the coming sensation. Colonel Gue recited briefly the outstanding features of the young bull referring to his pedigree, which he said was considered to be a record of marvelous achievement in production lines, records back of every ancestor of the fourteen constituting the three generations shown in the pedigree. Before he had gotten half wound up on calling for bids to start the calf a breeder broke into the oratory with a bid for $1,000. The price quickly climbed under the spirited bidding to $16,000, when the field narrowed down to two. At $21,500 Mr. Von Herberg bought the coveted bull calf and hung up a Pacific coast record for a bull (of any age) and an international record price for a bull calf at public sale.

The dam of Finderne Mutual Fayne Valdessa is Finderne Mutual Fayne, that has the world's record for butter for year (1,200.64 pounds) as a junior

THE $21,500 YOUNGSTER.

two year old—exceeding the previous record by over 200 pounds of butter in one week eight months after calving. Freshening shortly thereafter as a three year old, she produced almost thirty-seven pounds of butter in one week.

The sire of Finderne Mutual Fayne Valdessa is King Valdessa, whose two nearest dams averaged 43.03 pounds of butter in seven days, the world's highest average.

State Holstein Breeders to Meet at Manitowoc.

To the Editor:—At a special meeting of the board of directors of the Holstein-Friesian Breeders' Association of Wisconsin it was decided to hold the next annual convention of this organization at Manitowoc, Wisconsin, on Wednesday and Thursday, February 28 and March 1, 1917. The annual banquet will be held on the evening of the first of these days. A literary and business program were also arranged, to be announced later when the speakers have been definitely engaged.

Other matters brought up for discussion were the Annual Holstein Booklet now under preparation, and soon to be issued, and the adoption of a campaign of association advertising. The association now has a substantial fund available for the purpose and the campaign will be started with the issue of the first annual booklet. It was also voted as the sense of the board of directors that preparation be made immediately upon the issue of the first booklet, to commence work on the next annual booklet.

Members of the board who attended the meeting were R. J. Schaefer, Appleton, president; J. P. Riordan, Mayville, and S. E. Jones, Watertown, directors, and Chris J. Schroeder, Racine, secretary. Others who attended the meeting to present matters of business were Chas. Hampke, Manitowoc, secretary of the Manitowoc County Holstein Breeders' Association; H. E. Harrington, Madison, associate editor of the Black and White Record, and J. P. Torrey, Kenosha, manager of the Stephenson Farm.

C. J. Schroeder, Sec'y.

Milk Production Improves.

To the Editor:—The Stratford Co-operative Cow-Testing Association has practically been out of the forty-pound list for the past two months, but we came back again in December with ten cows which produced forty pounds of butter fat or better in thirty days. One cow, a member of the Greenwood Stock Farm herd produced 1,838.4 pounds of milk, 3.1 per cent test, or 57 pounds of butter fat. Harry B. Keller, a member of our association, had the best herd average the past month with six cows producing on an average of 588.6 pounds of milk, of 4.63 per cent test, or 27.25 pounds of butter fat each. One cow in the Chrouser Bros.' herd produced 1,277.7 pounds of milk testing 4.1 per cent or 52.3 pounds of fat for the month.

Harry A. Johnson, Official Tester.

Why Let Your Cows Slink Their Calves? You Need'nt

What is Abortion in cows?
A contagious, communicable venereal disease that is costing the breeders of the U. S. millions of dollars yearly.

Can this disease be prevented or overcome?
It can be prevented and overcome.

What do the agricultural colleges say?
Some say it can be prevented and overcome and others say it cannot be.

What does the U. S. Government say?
The U. S. Government recommends the hypodermic treatment as the very best method of combating this disease.

Who says that Abortion cannot be prevented and overcome?
People who have not used the Roberts treatment, or who have used only part of the treatment and not according to instructions.

Who says that Contagious Abortion can be prevented and overcome?
The owners of 5,000 herds of cattle who have treated their cattle from one to four times during the past 25 years, owing to the fact that their herds had become reinfected through new animals purchased.

Has this treatment always proved successful?
No, it has not.

Why not?
Because the directions have not been followed.

Does Dr. Roberts claim that this treatment will wipe Abortion out of any herd regardless of how long it has been afflicted?
Yes, absolutely; providing the cattle are free from tuberculosis and providing directions for treatment are followed.

What evidence is there that this is true?
Animals and herds that were pronounced incurable by veterinarians and owners after having many kinds of abortion treatments given and applied to them have been successfully treated by Dr. Roberts and have been given splendid 7-day and yearly records. Lynden Grove Betsy De Kol, 5 years old—yearly butter record, 721.49 lbs. and 18,563 lbs. of milk—is a typical case.

Do agricultural colleges indorse the Roberts treatment?
No; agricultural colleges will not indorse or recommend any *commercial* treatment for live stock diseases.

If one of the agricultural colleges had discovered the Roberts treatment, would colleges indorse and recommend the Roberts treatment, knowing that it had stood the test of 25 years?
No question but what they would do so.

Does the U. S. Government recommend the Roberts treatment?
The U. S. Government indorses no commercial treatment, but in the government bulletin it recommends a treatment that is embodied in the Roberts treatment. Everything that is recommended in the U. S. Government bulletin is contained in the Roberts treatment, with ingredients that have never been made public.

If Dr. Roberts can take infected herds, knowing them to be such, and by his treatment wipe out the disease; if Dr. Roberts can introduce the disease into a herd through infected animals, then check it and wipe it out; if Dr. Roberts can keep his own valuable herds of pure bred cattle free from tuberculosis and contagious abortion, it proves that it can be done. *Dr. David Roberts has done these very things and what he can do you can do if you will do as he tells you to do.*

There is a Roberts medicine for every animal ailment. Sold by nearly 4000 druggists; if not at yours, write us direct, give your druggist's name. Dr. Roberts' great "Practical Home Veterinarian," 184-page cloth-bound book, will be sent you postpaid for $1.00.

Look for and insist on getting the package bearing Dr. Roberts' picture.

DR. DAVID ROBERTS VETERINARY COMPANY
950 Wisconsin Avenue, Waukesha, Wisconsin

SUPERIOR 4 Inch Grain Drills

ARE made for the farmer who wants to sow his grain in rows closer together. The Superior 4 Inch Drill distributes the seed more evenly, with more rows per acre and less seed in the row, giving each plant more root room, fertility, moisture and a better chance for sturdier, healthier growth.

Bigger Crops—Fewer Weeds

It has been proven that a greatly increased yield is obtained, some claiming almost one-third more than by the old method of seeding. The discs are so spaced that a highly cultivated seed bed is obtained with almost total elimination of weeds.

Superior 4 Inch Grain Drills are made in two sizes, plain and fertilizer styles. Operate perfectly under the most exacting conditions. The heavy angle steel frame will stand up to all strains encountered in field work. Superior Disc Bearings are guaranteed against wear. Positive force feed for both grain and fertilizer.

Ask your Dealer for further information, which he will be glad to furnish you, or write us for descriptive pamphlet.

The American Seeding-Machine Company, Inc.
Springfield, Ohio

THE GOOD JUDGE SEES A HOG ON TWO LEGS

SOME call these face-stuffers hogs, some call them gophers. But they are getting scarcer and scarcer since gentlemen found out about W-B CUT Chewing. There is no excuse for a man making a monkey of himself today. The fine *rich tobacco flavor* was put into W-B by nature, the touch of salt brings it out nice and tranquil like, without your worrying your jaw around continually. W-B is getting to be pretty nearly as popular as sunshine these happy days.

Who Wants Saxon Auto?

Ask About It

Suppose I came to you in your home and said: "I have some work I want done in your neigborhood. It is work you can do during your spare time and I will pay you well for it. A boy or girl can do this work as well as a man and the pay is just the same. People will be glad to help you when they find what you are doing.

This sounds like a pretty good offer, doesn't it? You would ask me to sit down and tell you more about it wouldn't you?

Well it is a good offer and a pleasant surprise too. The best part of it is that you not only get paid forevery bit of work you do, but all the time you have a chance to get the splendid $395 Saxon Auto shown in the picture. This auto is going to some lucky chap without it costing him a cent of money. You can be the lucky one. I cannot tell you all about it here but your name and address on a post card will bring you my big free offer right away.

The Auto Man, 410 Popular Bldg., Des Moines, Iowa

Tractors on Wisconsin Farms.

A Few Experiences of Our Readers With This New Motive Power and Its Adaptation to General Farm Work in This State.

[Editor's Note.—The Wisconsin Farmer has corresponded with several Wisconsin farmers whom we have learned have had experience with tractors and the following will give some results of their work.]

Record Sheets of Tractor's Work.

Mr. J. H. Bublitz, of Edgerton, Wisconsin, has forwarded to The Wisconsin Farmer one of his daily record sheets covering the operation of his 8-16 tractor. This sheet is made out for August 14, 1916. It is furnished by the manufacturer of his tractor and the purpose is to keep an accurate record of expense and performance. The accompanying illustrations will give some idea of work which Mr. Bublitz is able to accomplish with his tractor. On the particular day in question the tractor worked ten hours at plowing, pulling three fourteen-inch bottoms and plowing at an average depth of six inches. Eight acres of wet, heavy soil stubble were turned over in the ten hours. This tractor uses kerosene, which was bought in 100-gallon lots at 8 cents. On the day in question about fifteen gallons were used. The measurement is not given as accurate and Mr. Bublitz estimates the quantity at fifteen to twenty gallons. In addition to using one cup of gasoline, or about 30 cents' worth, and about a gallon of oil, it cost him 23 cents. He buys his oil in fifty-gallon lots. This operator ran his own tractor and had no expense for hired man. We quote from Mr. Bublitz's letter:

This tractor is used to run a threshing machine. The tractor is what is known as the 8-16 and the thresher is the 24-42 and the tractor handles it in fine shape. On a good day's run we thresh 1,200 bushels. We also fill silos. This year we filled ten and at the time this is written we are shredding corn. The shredder is a four-roll machine and the tractor could almost handle another one.

Our farm is slightly rolling. The chief crops are corn, tobacco and hay. This tractor has not displaced any horses, as we did not get it to do farm work, although on very hot days we use it to plow land for millet. We are well pleased with the tractor in every way. It has been used for moving buildings, pulling trees, hauling logs and pulling up stone. We can always find some good use for it.

This letter certainly gives us a splendid idea of what a good tractor can do in the way of plowing and also some of its other important accomplishments.

SHREDDING CORN WITH TRACTOR ON J. H. BUBLITZ FARM, NEAR EDGERTON, WISCONSIN.

TRACTOR HAS ALMOST COMPLETED THIS JOB FOR MR. BUBLITZ.

MOVING ON TO THE NEXT JOB.

Horses Gave Out--He Bought Tractor.

To the Editor:—I purchased a small tractor in April, 1916. I didn't expect to buy until fall or next spring, but two old horses gave out without warning and I had to do something. I have plowed about 160 acres with it and find it to be O. K. I pull three fourteen-inch bottoms and plow nine acres in ten hours, using twenty-two gallons of kerosene and five quarts lubricating oil. I tie one section drag behind in all plowing except sod and find it does good work. It would certainly require seven good horses to pull three fourteen-inch bottoms and one section drag behind, plowing six inches deep in heavy soil. We have a few grades to work, but nothing steeper than about 5 per cent. Our chief crop is corn, with barley a close second. The horses necessary to cultivate corn, and for 100 acres I should say five or possibly six, would be plenty.

I cut most of the grain with the tractor after the hot weather came. I drove the engine from the binder seat without help. I used engine in dragging and spring plowing and was surprised to get such good results. I also disked forty acres of sod, using my

regular four-horse disk and two-section drag behind. In belt work a tractor cannot be beat. I have used it on grinder, husker and wood saw and for any amount of little odd jobs. Also graded roads five days. I expect to see tractors as thick in the country in a short time as automobiles now are.
Rock Co., Wis. A. J. Locke.

Uses Machine For Several Purposes.

To the Editor:—We bought a tractor this fall in time to get a little experience filling four or five silos. We were pleased with it. We also plowed one day with it, but my land is very stony and the stones bother quite a little. If there were no stones I would not think of using anything else but a tractor. We will probably use this machine in the spring for pulverizing and getting in spring crops.
Dane Co., Wis. Wm. Blamy.

Uses Tractor With Brush-Breaker

To the Editor:—I have a gas power truck and have been having better success with it on belt work than I did with steam for the same class of work. For one reason, I can get over the road faster and I can pull some load, too, when I have to. I run a 32-52 separator with feeder and wind stacker and I get along with less men. Nowadays if I cannot get a man I can do my work alone. I used a brush-breaker on some land where it was impossible to use horses. I am also owning a 15-30 and have purchased a 30-60 oil-pull, especially for saw mill use. Carl Paskey.
Columbia Co., Wisconsin.

Uses Tractor in Muck Lands.

To the Editor:—During the past five years I have had under my care about a dozen different tractors. At present I have six of one make in operation. Five of them are fifteen line horse power machines and the other a 30-60. The former machines were purchased in 1914. The latter machine I am very partial to, as it certainly does work which I had never expected a tractor would do. It displaces about twenty-eight horses and means a daily saving of about $12 in the work which it will do.

I have not had any experience with tractors on rough, hilly land, all my work being on muck bottoms. This machine which I am now using has a fifty-inch drive wheel and a twenty-four-inch front wheel, and I have never at any time found it incapable of looking after seven heavy plows or double set of disks. Just what would be the condition trying to use this machine on the average-sized Wisconsin upland farm I am not able to say, as I have not had experience along that line. Ed Oliver.
Waupun, Wisconsin.

Could Save Three Horses.

To the Editor:—I am a little green about the tractor as yet and may be able to give your readers more information later, but am glad to give what I know up to this time. I run a twelve-inch silo filler with my tractor and filled my 32x14 silo in two days. My tractor pulls two fourteen-inch bottom plows, and I plow about five or six acres in nine hours' work. I think this is pretty good work. I have six horses now, but expect to sell two of them, besides I have all my horses in foal now which would not be possible without a substitute for horsepower on my farm. If it wasn't for the fact that I want to raise some good colts I believe I could cut down to three horses. My farm is on the rolling order and I wish you could see me go up hill with the tractor at two and three-quarters miles an hour, plowing with two bottoms eight and nine inches deep. My chief crops are corn and oats. John Lies.
Naperville, Illinois.

Extra feed this winter weather is resulting in worth-while egg production on the Harry D. Dunbar Farm, Walworth county. Mr. Dunbar says he is obliged to feed anyway, and a little extra feed more than pays for itself when the eggs are counted and sold. He has been getting two and a half to three dozen eggs a day, and these are worth enough money to count up in these days of good prices.

In and Around Wisconsin

The Sauk County Agricultural Society has re-elected S. A. Pelton as secretary for the ensuing year. The total debt of the society is about $6,000. The 1916 fair was the best the county has ever held, so the people say, and the society is cutting down its indebtedness.

SECOND-PRIZE-WINNING EXHIBIT AT 1916 POTATO SHOW.
This Exhibit was Gathered Under the Direction of R. L. Cuff, County Agent.

River Falls has adopted the market-day plan, and the first special day is January 25th. One feature will be a stock sale, where farmers will have an opportunity to offer all kinds of stock which will be auctioned off to the highest bidder.

During the year ending December 2d, last, the Ellsworth Shipping Association, of Pierce county, shipped 296 cars of stock for farmers to South St. Paul. The farmers received for this stock, $364,143.94. It is claimed that Ellsworth ships more stock than any town of its size in the state. It is in the midst of a good hog and beef country. Pierce county has a number of co-operative societies, and shipping societies have handled 800 cars of stock, for which more than $1,000,000 has been paid farmers.

The Central Wisconsin Live Stock Association will hold its annual sale at the new pavilion in Marshfield, May 10th. The offering will consist of Holsteins, Guernseys and Jerseys. The auctioneers will include Col. D. S. Perry, of Columbus, Ohio; W. H. Krause, Thorpe, Wisconsin; William Ebbe, Marshfield, Wisconsin, and G. D. Hammil, Grand Rapids, Wisconsin.

Announcement is made that the 1918 convention and show of the Wisconsin Potato Growers' Association will be held in Madison. Arrangements for a big gathering of southern Wisconsin farmers is expected. This is the first time for several years that this organization has moved its convention outside the potato belt of central and Upper Wisconsin. A great many of the potato growers up state are anxious to visit the capital and the experiment station here, and plans are being made to entertain the convention royally.

The average price paid for American cheese on Wisconsin dairy boards for the sixteen years is as follows: 1901, 10¼ cents; 1902, 11⅝ cents; 1903, 11 cents; 1904, 9⅛ cents; 1905, 11 cents; 1906, 12 cents; 1907, 13½ cents; 1908, 12¾ cents; 1909, 15 cents; 1910, 15½ cents; 1911, 14 cents; 1912, 16 cents; 1913, 15 cents; 1914, 15¼ cents; 1915, 14¾ cents; 1916, 18 cents. The average price paid for cheese in 1916, which is the best cheese year, from the price standpoint in the history of the state, is as follows: January, 17½ cents; February, 18⅜ cents; March, 17¾ cents; April, 16 cents; May, 15¼ cents; June, 14⅝ cents; July, 15¼ cents; August, 15½ cents; September, 18¾ cents; October, 19⅞ cents; No-

Model C 12-20 H.P. $1095
Heider
Model D 9-16 H.P. $795
Made and Sold By Rock Island Plow Company

The Heider Friction Drive is the finest feature.—C. E. HUGHES.
We drag 22 miles of road a day with our Heider.—ED. WILSON.
My two boys 13 and 14 years old run my Heider.—C. W. RANDALL.

Stacks of Letters Like This—
Looked at 40 Makes—Glad He Bought Heider
Beaman, Iowa, Oct. 3, 1916.
My Heider has always given me the best of service. I use it for hauling corn, oats and hogs, plowing and operating ensilage cutter and corn sheller; also put out my oats crop with it. I pulled two 8-ft. discs and a 20-ft. harrow. I looked at 40 different makes and sizes of tractors before I bought mine. The Heider is the easiest of any to handle.
The friction drive does not slip any. The engine works just as well on kerosene as on gas. My machine has never cost me one cent except for fuel and oil.—C. O. MYERS.

LESS GEARS
THE HEIDER has less gears than any other tractor. Less gears mean less trouble, easier operation and your repair expense cut to a minimum. It costs a good deal to replace broken gears. The 4-cylinder, heavy-duty, Waukesha motor is another guarantee against trouble. It is recognized everywhere as the best possible type of motor construction for a tractor.

A Real One-Man All-Purpose Tractor
for the heavy work of plowing, seeding, harvesting, threshing and hauling. Pulls three 14-inch plows under average conditions, or four 14-inch plows where conditions are favorable. Does the belt work of every power machine you own or intend to own up to its rated power. Throttles down to just the fuel needed. Famous Heider Friction Drive proved by nine years of success. Transmits most power and is easiest to handle. For proof read the letters of Heider owners which we will send you with new catalog. See how they save money and make money with their Heider Tractors, on small farms as well as large farms. Backed by our 62 years' manufacturing success and the reputation of Rock Island Implements in all parts of the world.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Care of Incubator and Chicks.

To the Editor:—I will give you a little of my experience with incubators.

First, one should have a good, reliable machine and a proper place for running one.

Next, one should have good, clean eggs from strong breeding stock that has been properly fed and cared for and sorted as to size and color. The majority should be of the same color, that is, dark or light.

After the machine has been run a few days at the proper temperature, which the catalog accompanying the machine will give you, the eggs should be placed in the machine in the morning so one can watch the eggs during the day to see that the proper temperature is attained. Then they should be left in the machine until the third day in the morning when they should be turned by taking out a few eggs and gently rolling the rest around in the tray with the palm of the hands, being careful not to crack any, and should be turned and aired ten minutes night and morning thereafter till the eighteenth day. They should then be left quietly till the hatch is completed on the morning of the twenty-first day.

Then the chicks may be taken out and placed in the brooder, which has been properly warmed up to 95 degrees or with hens, as desired, and should receive no feed for forty-eight hours. They should be given some fresh water in small vessels arranged so they cannot get wet. A good drinking vessel is made by inverting a common goblet or water glass in a saucer, placing a piece of match or something under one edge to let the water out as the chicks drink it. They should then have some wheat bran sprinkled over some clean, sharp sand. The wheat bran can be added from day to day till an inch deep on the floor of the brooder. In the evening of the third day they may have some good commercial chick feed sprinkled in the bran, or some bread crumbs mixed with hard-boiled eggs placed on clean paper and can be fed this same feed until old enough to eat coarser feed. After about ten days some commercial meat scrap or any animal feed that is obtainable, sour milk being one of the best, and is often a preventive of bowel trouble. Should any of them show signs of bowel trouble they should be destroyed or taken from the clutch and fed by themselves, being careful to burn the paper on which they are fed and scalding the vessels every day from which they drink. Too many should not be placed in one brooder, as trouble is sure to follow sooner or later.

In handling the incubator during cold weather it should be carefully watched, but not opened any more than is absolutely necessary. The lamp should be filled and the wick trimmed morning and evening after the eggs have been turned and while they are airing, and the machine should be thoroughly cleaned with some hot water in which a little carbolic acid or some good disinfectant has been added before being reset.

Manville, Ill. Harry Dicken.

The Mixed Flock.

To the Editor:—No doubt the thoughts of the average farm wife and other admirers of poultry are at this time of year turning to the farm flock. And justly they should do so early because "well begun is half done" with chickens the same as anything else. A little attention now in culling the weaklings and off colored birds will be a most profitable investment. This is the time of year to decide on the one variety you will have in the farm flock. Poultry breeders have yet to see the mixed flock, no matter how carefully attended, that will measure up to a pure-bred flock having the same legitimate care.

Some people have the idea that by promiscuous mixing of breeds you get a better laying flock; you may get a few good layers, but for every good one there will be six or a dozen scrubs admired by no one. There is nothing more beautiful than a fine flock of pure-bred chickens regardless of what the variety may be. Then there is the more economic aspect because farmers do not generally raise chickens for fun.

There is always a good demand for fine young cockerels at at least several dollars each, while with the mixed or scrub flock the best use one can make of the young males is for meat which is a scarce article on some of the smaller so-called egg breeds. There is absolutely no justification for raising mixed or scrub chickens when in one season you can establish a flock of pure breds at such a reasonable figure, and which will be the pride of anyone, to say nothing of the added profit. Breeders of pure-bred chickens would no more consider a mixed flock than would our famous Wisconsin dairymen think of losing interest in their herds to the extent of using a scrub bull, and it takes years of time and more cash to get a pure-bred herd, while a flock of pure-bred chickens can be established in a season no matter how humble one's means.

Decide now to keep a flock of pure breds or improve the one you have already started. Look up some of the poultry advertisements in this paper and buy your male birds early and insure the best possible selection. If you need eggs place your orders early, because breeders fill them in the order received. Do it now and you will be amply rewarded before this time next year. J. H. Dance.

Waukesha Co., Wisconsin.

Packing Incubator Eggs.

To the Editor:—I have been reading your paper for many years and enjoy the poultry department very much. I wish to ask some of the readers if they will tell me through the papers how to pack eggs for setting in lots of 100 or more, that is, large eggs such as duck and turkey. A bushel

basket will not hold 100 duck eggs if you put a top on it and if there is a covering of excelsior the eggs are sometimes broken. If packed in twelve-dozen egg cases it would take two egg cases to hold 100 duck eggs, as they are so much larger than hen eggs that several places must be left empty, and that makes the express rather high for the purchaser.

Waukesha Poultry Show.

To the Editor:—The ninth annual show of the Waukesha Poultry and Pet Stock Association will be held in Waukesha, January 29 to February 3, 1917. There are large cash and special prizes and also silver cups offered.

As this is one of the large shows of the state it will pay you to show with us, as a prize won here means something.

The state meet of the Rhode Island Red Club, both single and rose comb, will be held at this show. Also the annual state meet of the Wisconsin branch of the American Buff Wyandotte Club will be held here.

George M. Wells will place the ribbons. J. R. Love, Secy.

Waukesha, Wisconsin.

Program For Farmers' Week

An elaborate program has been arranged for Farmers' Week, better known as Swine Week, at the college of agriculture, Madison, February 5th to 10th. In addition to a swine show, swine sales, meetings of all the swine breeders' associations, swine lectures and exhibits of pork by-products and hog houses, there will be special programs for dairymen, including conferences of creamery and cheese managers, conferences of cow testers, etc. The horticultural school, soil school, county life conference and homemakers' program will be complete as usual. The following is a brief review of some of the more important events of the week:

Monday February 5th.—W. L. Houser, chairman. Morning subject "Beef Cattle." Addresses by Dean H. L. Russell, Dean W. L. Carlyle, of Oklahoma Agricultural College, and W. S. Tasker. General subject for afternoon, "Sheep," with Arthur Broughton, chairman. Addresses by W. C. Coffey, Illinois station; R. J. Stone, breeder and judge, of Stonington, Ill. At 3:30 p. m. annual meetings of the Wisconsin Short-horn, Aberdeen Angus, Hereford, Red Polled and sheep breeders' associations. Evening, address by Dr. A. S. Alexander. Moving pictures.

Tuesday, February 6th—From 8:30 to 10, annual meeting Wisconsin Live Stock Breeders' Association. Addresses by E. R. Jones, on drainage, B. H. Hubbard, on new federal land loan law, J. G. Halpin on poultry topics, J. B. Hayes on poultry topics, and R. H. Roberts on horticultural topics, in Agricultural Hall. At 10 o'clock occurs the "Profitable Pork" meeting with James Dillon, chairman. Addresses by A. M. Laird, J. G. Fuller, G. B. Van Norman. At the afternoon session addresses by F. B. Morrison, L. P. Martiny, James Fisher, Dr. F. B. Hadley. Annual meetings of Poland China, Duroc Jersey, Chester White and Berkshire Associations of Wisconsin. A banquet will take place at 6:30 p. m.

Wednesday, February 7th—From 8 to 10 devoted to addresses by Wisconsin Station workers. At 10 a. m. addresses by E. T. Robbins, representing Percheron Horse Breeders' Association and M. F. Woodhouse, who was manager of the Bloomington, Wis., Colt Show. The annual meeting of the Wisconsin Horse Breeders' Association will be held at 11:30. In the afternoon the Duroc sale will be held in the sheep pavilion, J. D. Gant in charge, and at 7:30 in the evening the Poland China sale will be held in the sheep pavilion, J. F. Diley in charge.

Thursday, February 8th—Lectures by station workers, 8 to 10 a. m. M. Michaels will be chairman of the 10 a. m. meeting to discuss breeding, feeding and testing dairy cattle. C. H. Eckles, Missouri Station; N. A. Negley, Wisconsin; F. R. Crane, of the Great Northern railroad; A. H. Wilkinson, of Bayfield, and Charles L. Hill, of Rosendale, will be other speakers of the day. At 3 o'clock will occur the annual meetings of the Guernsey, Holstein, Jersey, Ayrshire and Brown Swiss Associations. The annual recognition service occurs at 7:30 in the evening. Address by M. D. Munn, president National Dairy Congress.

Friday, February 9th—Following talks by station workers the country life conference will convene at 10 a. m. An elaborate program has been arranged, C. J. Galpin in charge. In cooperation with the Wisconsin Experiment Association a program covering the general topics of breeding, growing and disseminating of pure-bred grains, will occupy a large part of the day. The program will be in charge of Henry Michels. Speakers will include Alfred Wenz, Henry A. Moehlenpah, W. L. Ames, president National Farmers' Congress, P. W. Jones, T. H. Campion, F. J. Seivers, James B. Cheesman, L. F. Graber and Peter Swartz. The last three named will represent the Wisconsin alfalfa order, and interesting illustrated pictures of growing alfalfa will be shown.

Saturday, February 10th—Business meeting of the Wisconsin Experiment Association. Addresses in the morning by Matt Michaels, William Budlong, of Rockford, Ill., Ford Allen and R. A. Moore.

The sixteenth annual grain show under the auspices of the Wisconsin Experiment Association will be held Farmers' Week. It is expected this will be the largest exhibit of pedigreed grains ever held in Wisconsin.

This brief review by no means tells all the good things that are offered for Farmers' Week, February 5th-10th.

THE FARMERS' MARKET

WANTED—FOR SALE—TO EXCHANGE

THIS department is to bring the buyer and the seller together. You may want help. You may have live stock, poultry and eggs, or machinery for sale. Maybe you want to sell or to buy a farm. Think how you can advertise now. Write your copy for the advertisement. The rate is six cents per word, each insertion. Note the low cost to reach our 90,000 circulation.

THE WISCONSIN FARMER MADISON, WISCONSIN

MILKING MACHINES.

NOTICE: The Official Milking Machine is low priced, classy, simplest, easiest to clean and most sanitary. None better regardless of price. Sold on "Your Money Back" guarantee. Mail orders solicited and I'll send an expert to install and start machine. Reliable agents wanted. Address F. C. Coward, Distributor, Elkhorn, Wis.

TELEGRAPHY.

TELEGRAPHY taught, positions secured, at the oldest, largest and most thorough equipped railroad training school in Wisconsin. Established 1897, under same management for 19 years. Investigate, ask for our new rate sheet, special inducements. Wisconsin School of Telegraphy, Oshkosh, Wis.

MONEY TO LOAN.

FARM LOANS on very good farms at 5% interest without commission and with privilege of partial payments. Write Geo. L. Jacques, Special Loan Agent, Northwestern Mutual Life Insurance Company, Neillsville, Wis.

MONEY to loan on Wisconsin farms in amounts of $2,000 to $25,000. 6% with any pre-payment privilege desired. Addressed 206 Washington Bldg., Madison, Wisconsin.

HELP WANTED.

WANTED—A reliable young man on farm by year. No cigarette or boozer wanted. Must be willing and honest. Will pay good wages to good man. W. E. Elliott, R. 4, Walnut Grove, Minnesota.

WANTED—Girl for general housework. State wages. Mrs. Roy Dolphin, Montfort, Wis.

HOLSTEIN-FRIESIAN CATTLE.

PUBLIC Sale—20 registered and 28 high grade Holstein cattle, 4 registered Clydesdale mares, 1 standard bred stallion, Duroc Jersey hogs, farm machinery, feed, etc. February 2, 1917. Write for catalog. Stephenson Bros., Darlington, Wis.

PERCHERON STALLION FOR SALE.

REGISTERED Percheron stallions for sale. One yearling, dark bay; one four-year-old brown, a good one; one black, blocky, 1800 lbs. All round and clean, heavy boned, cheap. Julius Schmidt, Wild Rose, Wis.

SALESMAN WANTED.

SALESMEN wanted to canvas the farming and threshing trade, soliciting orders for Lubricating Oils, Greases and Paints. Excellent opportunity for right party. Previous experience unnecessary. Address at once The Victor Oil Company, Cleveland, Ohio.

PLYMOUTH ROCKS.

PURE-BRED Barred Rock cockerels. Write for prices. Rockwood Farms, Box 4700, Brookfield, Wisconsin.

GUERNSEY CATTLE.

FOR SALE—Eight Guernsey heifers. One fresh, two year old. A. C. Johnson, McFarland, Wis.

FARM LANDS.

BE YOUR OWN BOSS. Get a Farm Home in rich corn and clover belt in Northwestern Wisconsin along new Soo Line, 50 miles St. Paul, Minneapolis, near Duluth, Superior. Landseekers all say: "I saw nothing better." You'll like this wonderfully prosperous stock and dairy region too. Well settled but prices still reasonable. Rich soils, hardwood timber, plenty rainfall, healthful climate, beautiful lakes, fine schools. Creameries everywhere. Only 50 miles big markets. Improved or unimproved, $15 per acre and up. Investigate at once. MAP AND LIST FREE. Baker N-110, St. Croix Falls, Wis.

LANDOLOGY, a magazine giving the facts in regard to the land situation. Three months' subscription, FREE. If for a home or as an investment you are thinking of buying good farm lands, simply write me a letter and say "Mail me LANDOLOGY and all particulars FREE." Address Editor, Landology, Skidmore Land Co., 310 Skidmore Bldg., Marinette, Wis.

GOING to buy in the spring? Don't do it till you've looked at Aitkin county, the Dairy District. Our Company will give you the pick of its lands. All the time you want. Arnold, Land Agent, Rock Island Railway, 153 Wolvin Bldg., Duluth, Minn.

GOOD 40 ONLY $300. No. 1031-M; clay loam soil; ½ somewhat low; balance gently rolling; firewood and small brush; easy to clear; 1½ miles from school; all cash; The Ev. Luth. Colonization Co., Dept. 10, Merrill, Wis.

FORTY and eighty-acre tracts well located in upper Wisconsin. Small buildings and clearings. $20 to $30 per acre. Very easy terms. Frank M. Doyle, Immigration Agent, Ladysmith, Wisconsin.

FOR SALE or exchange for wild land in southwestern Nebraska, live stock farm of 760 acres 2½ miles from town. Write Albert Ferdon, Pittsville, Wisconsin.

HAVE two farms for sale on easy terms, or I will rent them to right parties by cash or grain rent. M. A. Peoples, Ladysmith, Wis.

WANTED—Wisconsin farm for 160 acres rich land near Las Vegas, New Mexico. Value $1,680.00. H. A. Snyder, Minooka, Ill.

FOR SALE—80 acres, 2 miles from Barron, no buildings, 30 acres cleared, all fenced. Easy terms. Elmer Rockman, Barron, Wis.

BUSINESS CHANCES.

FREE for six months—My special offer to introduce my magazine, "Investing for Profit." It is worth $10 a copy to anyone who has not acquired sufficient money to provide necessities and comforts for self and loved ones. It shows how to become richer quickly and honestly. Investing for Profit is the only progressive financial journal and has the largest circulation in America. It shows how $100 grows to $2,200; write now and I'll send it six months free. H. L. Barber, 509-28 W. Jackson Boulevard, icago.

CLOVER SEED FOR SALE.

CLOVER seed. Medium red clover seed, guaranteed free from foul or noxious weeds, @ $9.95 per bu.; new sacks 25c extra. Good, clean timothy seed @ $3.50 per bu. Order now before seed goes higher, from Reuter Bros., Carlos, Minn.

DUROCS AND POLANDS.

TWENTY Duroc and Poland China sows, bred. Ten Poland China boars. Holstein bulls ready for service. E. G. Carpenter, Hortonville, Wis

LANDS AND HOMES

Farm For Sale or Rent

A GOOD home on 80-acre farm. Good buildings, good soil, near school and creamery, six miles west of the county seat of Taylor county, Wisconsin. Nearly half cleared, balance easy to clear. Price $6,000.00; $1,500.00 cash, balance on time. Will rent for three or five years. L. A. KIMBALL LAKE GENEVA, WIS.

MONTANA NORTH DAKOTA

OPPORTUNITY LAND

Others are making good in Montana and North Dakota and so can you. Montana leads the world in development of farm lands—in quality of grain produced. There is still opportunity to homestead or purchase deeded land at very low prices in this great new golden Montana country. Send for Montana Bulletin today, fully illustrated and with complete information. Up in North Dakota prosperity reigns supreme. Diversified farming is proving a huge success in this bread basket of the world. And your share of this land awaits you for a small investment.

Let Me Mail You FREE Bulletins containing full information about Montana and North Dakota opportunities. I will gladly help you make a choice and advise you honestly about best values on the line of the Great Northern Railway. Write for bulletins and advice today. Address

GREAT NORTHERN RAILWAY

E. C. LEEDY, Gen'l Immigration Agt. Dept. 199 Great Northern Railway, St. Paul

YOUR CHANCE IS IN CANADA — Rich lands and business opportunities offer you independence: Farm lands, $11 to $30 acre; irrigated lands, $35 to $50; Twenty years to pay; $2,000 loan on improvements, or ready made farms. Loan of live stock; Taxes average under twenty cents an acre; no taxes on improvements, personal property or live stock; Good markets, churches, schools, roads, telephones; Excellent climate—crops and live stock prove it. Special homeseekers' fare certificates. Write for free booklets. Allan Cameron, General Superintendent Land Branch, Canadian Pacific Ry., 82 Ninth-av., Calgara, Alberta.

A SMALL farm in California will make you more money with less work. You will live longer and better. Delightful climate. Rich soil. Low prices. Easy terms. Sure profits. Hospitable neighbors. Good roads, schools, churches. Write for our San Joaquin Valley illus. folders, free. C. L. Seagraves, Ind. Com'r, A.T.& S.F.Ry., 1959 Ry. Ex., Chicago.

MINNESOTA The State that offers you a home; excellent schools and churches; good roads, pure water, healthful climate, splendid soil. Write for free maps and literature telling all about this State. Fred D. Sherman, Commissioner of Immigration, Room 200, State Capitol, St. Paul, Minn.

FOR SALE A 135-acre farm near Jefferson, Jefferson county, Wis. The farm is ½ mile from condensery, two creameries and railroad station: an elegant place for the cattle business, pure-breds or grades; the dairy center of the world. Priced to sell. E. H. Riesling, Jefferson, Wisconsin.

BUSINESS Building for sale, cheap, in a growing town. Inquire of Elizabeth Zastrow Estate, Tomahawk, Wis.

MAN to wear fine suit, act as agent. Big pay, easy work. Banner Tailoring Co., Dpt. 534, Chicago.

RED Polled cattle for sale, both sex and different ages; also Poland China hogs; prices right. Cloverbelt Stock Farm, Hamburg, Wis.

The Only Tractors With Renewable Inner Cylinder Walls

With an Avery Tractor if your cylinders become worn or scored all you have to do is to put in new cylinder walls. But with all other tractors you must have your old cylinders rebored and fitted with oversize pistons and rings or buy complete new cylinders, either of which is very expensive and causes serious loss of time.

OTHER THINGS YOU GET ONLY IN AN AVERY

Only Averys have sliding frame, two speed, all spur gear, four wheel, double drive transmission. Only Averys have no fan, no water pump, no fuel pump, no outside lubricator, no belts, no sprocket chains. Only Averys have a standardized design—five sizes—all alike.

The Avery line includes five regular size tractors—8-16, 12-25, 18-36, 25-50 and 40-80 h.p., and special 5-10 h.p. Plows and Threshers in all sizes—and Two-Row Motor Cultivator. Write for a free copy of the new 1917 Avery Catalog and name of nearest Avery dealer.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

Questions and Answers.

Long or Short Hitch.

I have been troubled for some time with a few mechanical problems, and I know of no other place that would be so well to submit them to as your paper; for not only myself, but thousands of others will be benefited by your answers. My question is about the difference in power of a long and short hitch.

Other things being equal, I do not think that there is anything gained by a close hitch; and I do believe that oftimes the farmer makes the mistake of getting his team too close to the load. I want to know whether I am right or wrong. I will admit that there are instances where hitching a team closer to the load is advantageous. However, it is not the mere fact of being closer to the load that makes for this.

I was plowing sod this fall with four horses hitched tandem to a gang. One of my neighbors came over and wanted to know why I did not hitch abreast. He argued that all the horses would be closer to the load, and, therefore, they could pull more. He could give no reason why they could pull more, but insisted that they would, "just the same." I argued that when I had a pulley attached to the beam of my plow and a chain run through the pulley and a team on each end of the chain, that both teams must pull an equal number of pounds, neglecting, of course, the friction of the chain in the pulley. It would make no difference if one team were two rods ahead of the other team; both would have to pull equally or the chain would slip through the pulley.

In a recent issue of a magazine published by one of the largest plow manufacturers, the writers contend that when a team is hitched so close to a sulky that some of the weight is removed from the front wheel, even though it is not removed from the ground, there is a loss of power. That front wheel is intended to carry the burden of turning the furrow, and it would be better to have the tugs let clear out. I have heard men say that they could hold a team with a hundred feet of rope, but I have yet to see one of them do it.

I contend that if a locomotive engineer has fifty empty cars and one loaded one to pull, the train will pull just as easy with the loaded one on the rear end, so long as the pull is on a straight track. It might pull a little harder around a sharp curve. Did anyone ever hear of an engineer placing the loaded cars ahead of the empties? An instance where being close to the load would make for easier pulling would be in a case where the front wheels of a wagon were sunk down in a mud hole. If the team were hitched close, they would lift some on the wheels, thereby making the wheels rise from the depression. Or a log will drag easier if you hitch close to it, provided the chain is hitched to the under side, because the team will lift it some, thereby lessening the friction between the ground and the log.

In case the point of hitching is higher than a level trace, the closer the hitch to the load, the harder the pull. We will suppose, for instance, that you wish to pull over a windmill tower, sixty feet high, by a rope fastened to the top. A team hitched to the rope sixty feet away from the base of the tower will not have to pull as hard as one hitched only fifty-five feet away. Threshermen always want a long belt between the engine and separator. I think they are right in this, even though they are further from their "load."

In brief, hitching close to the load has nothing whatever to do with the pull on a straight, horizontal pull, where you reckon distance only. Am I right?

Answer.—You are right. On a straight pull, that is, on a pull where the line of force is parallel with the plane over which the load is being pulled, whether horizontal or not, it makes no difference whether the hitch is long or short. On a straight pull a horse will pull as much hitched fifty feet from the load as if hitched five feet from it. In making a hitch there are other things to be considered besides the straight pull and to obtain best results the farmer must use considerable judgment. For instance, the short hitch may be the better for dragging a log, for the reason given by you; the long hitch would undoubtedly be the better for pulling over a windmill tower. We can see where there might be some loss of power if the horses are hitched too close to a sulky plow. Whether to hitch tandem or abreast is largely a question of which way the farmer prefers to handle the horses. The mere fact that the horse is closer to the load does not enable it to pull more. There is usually more power lost in side draft when an abreast hitch is used than when a tandem hitch is used.

A train starts better with the empty cars at the front, because there is always some "slack" in the train. The empties start first, and part of the momentum they gain on the first pull is used to start the loaded cars. The friction at starting is always greater than the running friction. Threshermen use a long belt because a long belt grips the pulleys tighter and the lineup need not be so exact as when a short belt is used. The danger of fire is also less. The distance alone between the engine and the separator does not affect the pull.

Another Small Truck.

We have a 1¾-horse-power Associated engine. Could we make it pull itself? Would it pull itself up a fairly steep grade?

Answer.—Mount the engine on a light truck and drive it as stated above. The engine should have power enough to pull itself up a fairly steep grade at two miles per hour.

Voltage For Ford Lights.

I have a 1915 Ford car. It has been run about 25,000 miles. When I speed it up to about twenty-five miles per hour, it always burns out one bulb or the other. We burn out a bulb every other night. We are using a nine-volt lamp. Would a ten or twelve-volt lamp burn out as easily? Would it be hard on the magneto?

Answer.—If you are having trouble with your lights burning out you should use bulbs of higher voltage, probably about twelve volts. This will not make it harder, but easier, for your magneto. If you use bulbs of too high a voltage, however, your lights will be dim, especially at low speeds.

Recharging Flash Light Battery.

Would you please tell me if I can recharge a flash light battery that is not quite worn out? It gives a red light when I flash with it. I do not think it is the globe that is giving the trouble. It is the Fresno semi dry battery, and is guaranteed to last two months.

Answer.—As a rule it is not advisable and often it is impossible to charge a flash light battery. You could probably strengthen your battery by putting it in series with a six-candle-power light in a six-volt circuit, connecting it so that the current would flow through the right way. Doubtless it would be better for you to buy a new battery.

Corliss Engine Valve.

Please designate the Corliss valve on steam engines.

Answer.—Steam engines may be divided into three types; the slide valve, the Corliss valve and the turbine. The slide valve engine is the most common, the piston valve being but a modified type of the slide valve. In this type of engine the steam is admitted to the cylinder through a sliding valve, operated by means of a valve rod driven by an eccentric on the crankshaft. The valve, sliding back and forth, uncovers a port first on one end of the cylinder and then on the other, which admits the live steam first to one end of the cylinder and then the other, while the exhaust passes out of other ports through the middle of the valve. The Corliss engine has four valves, located at the upper and lower corners of the cylinders. The two upper valves admit the steam to the cylinders, the two lower valves being the exhaust valves. These valves do not slide, but rotate back and forth about a third of a turn, thereby opening or closing the steam ports. The valves are rotated by means of rods attached to a disk called the "wrist plate," fastened to the side of the cylinder. The wrist plate is partly rotated from an eccentric rod from the crankshaft. The motion is such that the valves may be opened and closed very quickly, which makes the engine very economical in the use of steam—much more so than the slide valve engine. It is heavy and expensive to make, however, and cannot be run at a high speed. The turbine engine has no valves, the steam blowing against the vanes mounted on the rims of disks. These disks are mounted on the engine shaft and enclosed in a heavy cast iron case which retains the steam and guides it in the right direction.

Fruits and Garden

Plans to Grow Onions.

One of our subscribers sends the following communication:

I went to my grocer for onions last week, and only got four pounds for a quarter. I call that scandalous, and think I'd rather be a producer than a consumer. I have a piece of land and propose to grow onions myself and sell them at three dollars per bushel. I understand that it is a simple thing to grow this crop. All you have to do is to plant the seed, and keep the weeds down. But I'm in the dark as to the best variety. The catalogs list so many that it is confusing. Should I take Prizetaker, or Silver King?

We are very glad to hear from this friend and will say that we think his spirit is commendable; also it is very wise to be reaching out after information. It is a simple thing to grow onions. You have the right theory, but notice this there is always a difference between theory and practice. The plan may be good, but the execution may be difficult. The architect's blueprints may be faultless, but you will meet many a problem in erecting the building.

Your plan presupposes ideal conditions, but, in fact, the conditions are rarely perfect. All we can do is to observe certain general principles and rules of work, making the best of weather conditions, which will greatly help or hinder us. You may have a great success and then you may have a partial failure. The chances are that you will have an average crop, neither as good as you hope for nor as poor as is possible.

We understand from your letter that you have had no experience in this line of work. While we can give in our limited space a few essential points, we strongly advise you to look up some practical onion grower and question him closely. If he is a practical, honest man he will put you very close to the secrets of the business.

First, get good seed. Better buy one pound at $3 than three pounds for $3. Second, plant very early, in March if possible. If the frost is out only one inch, just enough to run the seeder, get them planted promptly. Of course, the surface needs to be dry, but it will do no harm if it freezes up tight as a brick afterwards. Third, cultivate thoroughly while the plants are small. Begin with the wheel cultivator as soon as you can see the rows. Keep down all weeds and never let the surface get crusted. These are the main conditions and the reasons for them are not far to seek. Poor seed, if it sprouts at all, will make poor onions. And to buy cheap seed is to throw away your chance of success at the start.

Early seeding is imperative because the onion plant makes its growth during low temperatures. Great heat ripens them up. You need to get the most of the growth done before the hot weather of July. The early cultivation is essential in order to push on the early development. Never let the plants get stunted by weeds. If you do good-by to your hopes of a crop.

There are other important points to consider. You should have a rich soil, mellow, and plowed at least ten inches deep. It should be as free from weed seeds as possible. Foul land will double your work of weeding. Poor land will make your onions small and shallow plowing will make them dry and ripen prematurely. Selection of varieties should be carefully considered. It is likely that the two you name attract you because of their large size. We would take neither of them. They are both poor keepers and the demand for them, especially for the white, is limited.

Choose standard market varieties. Red globe, yellow globe, yellow Danvers, red Weathersfield, these are all good keepers, large onions and popular with consumers. If you are as wise as we think you are these hints will help you a little.

It is well to be hopeful and anticipate good results, but avoid building too big "castles in the air." For instance, you are no ways likely to sell your crop at $3. You can do well at $1.50. This year's scarcity will not continue. Exclusive onion growers are often glad to sell at 70 cents and that pays when the yield is 600 bushels per acre.

Do Strawberries Run Out?

We have lately read the statement that all of the hundreds of varieties of berries, once favorably known, have "run out," ceased to be profitable and been abandoned. "Where," asked the writer, "are the Wilson, the Crescent, the Sharpless and a score of other varieties which stood first in popular esteem thirty years since?" And he declared they had failed, "run out," deteriorated, and because of that their places had been taken by worthier sorts.

We must positively dissent from that proposition. It is true that the older sorts have been displaced, but not because of change in the berries. They have been drowned out by the flood of new varieties sent out like a spring freshet by the plant growers. It is a case of the survival of the advertised. It is the "push" of the plant seller which has driven the old sorts from public favor.

See how easily this can be done. The average planted sets a bed of berries, gets three crops from it and then finds that he must renew it. But there are no new plants formed the third year, so he must perforce buy a new start of the plant dealer. Looking at his catalog he finds extravagant praise of some new sort, and as, of course, only wants the best, he takes it. It only takes six years to make an in any neighborhood, except in cases, and they are rare, where an expert has carefully planted good runners annually from his beds.

We have known cases where careful men have kept the same old favorite for fifteen years and found them as good the fifteenth year as the first.

Take the case of the Warfield, which is now twenty-five years old at least. The writer has a fresh bed of it and finds it just as good as at first. And in size and yield it compares very favorably with the Senator Dunlap, which has been the brag berry for the last few years.

If you can get the old Crescent and Wilson pure plants, they will do just as well in 1917 as they did in the seventies and eighties of the last century.

Olds' Wisconsin Pedigree No. 1

Best Oat Ever Introduced

First offered four years ago, now the most popular oat in Wisconsin. Result of 14 years breeding work at Wis. Ex. Station. Pronounced there "Best for Medium Rich Soils" and "Best Oat in the World."

Olds' 1917 Seed Book

offers splendid stock. Also Olds' White Kherson, Olds' Improved Yellow Kherson, Regenerated Swedish Select, Olds' Scottish Chief and others. Big yielding varieties potatoes, corn, oats, barley, wheat, alfalfa, vegetable and flower seeds. Write today. Samples Free all Field Seeds.

L. L. OLDS SEED COMPANY
Drawer 7 Madison, Wis.

The Chinese Woolflower introduced by us three years ago is now acknowledged to be the greatest new garden annual. It is a success everywhere, plants growing 2 to 3 feet, a pyramid of color, its many branches bearing great balls of wool-like substance and most intense crimson scarlet. Flowers develop in June and none fade before frost, ever brilliant and showy beyond belief. Seed per pkt. 10 cts., 3 for 25 cts.

New Hastodon Pansies. For immense size, wonderful colors and vigor they are marvels. Seed 10 cts. per pkt., 3 for 25 cts.

Everblooming Sweet William, a startling novelty, blooming in 60 days from seed, continuing all the season, and every season being hardy. Flowers large, colors exquisite—pkt. 10 cts.

These 3 great Novelties, with two more (5) for only 20 cts. See Catalog for colored plates, culture, etc.

Our Big Catalog of Flower and Veg. Seeds, Bulbs, Plants and rare new fruits free. We are the largest growers in the world of Gladiolus, Cannas, Dahlias, Lilies, Iris, etc.

JOHN LEWIS CHILDS, Inc., Floral Park, N. Y.

WHITE SWEET CLOVER $3.90 Per Bu.

[BIGGEST MONEY-MAKER KNOWN—INVESTIGATE

The greatest forage plant that grows. Superior to all as a fertilizer. Equal to Alfalfa for hay. Excels for pasture. Builds up worn-out soil quickly and produces immense crops, worth from $50 to $125 per acre. Easy to start, grows everywhere, on all soils. Write today for our Big 100-page free catalog and circular about unhulled and scarified hulled sweet clover. We can save you money on best tested, guaranteed seed. Sample Free.

MAKE BIG MONEY in Contract Tile Ditching

Thousands of American and Canadian acres will be tiled this year. Last year's extremely wet weather has convinced farmers and land owners everywhere that if they are to save their crops after going to the expense and labor of planting and cultivating them, they must tile drain and do it thoroughly.

Here is an unequalled opportunity for contract tile ditchers to cash in big. Let our Service Department help you, as we have helped others, to build up an independent, profitable and healthful business with the

"A Perfect Trench at One Cut"
BUCKEYE Traction Ditcher

Here Is Real Proof of Actual Results

Brussels, Ontario, December 30, 1913.
"We have had a successful year with the ditcher. I find it a great thing for both contractor and farmer. One man told us he had such difficulty in getting draining done by hand that when he saw how perfectly the Buckeye worked he felt like throwing up his hat and cheering like a school boy. He always heard so much grumbling from men working by hand that he felt under an obligation to them, but the ditcher walked off so quickly with the work that it was a real pleasure. This from the farmer makes it very satisfactory for the contractor, for he is always welcomed back the next time."—H. B. KIRKBY.

Curtice, Ohio, January 10, 1916.
"I am well satisfied with my Buckeye. That machine is making me more money than 40 acres of land. I have made about $1200, on a rough guess, this season, and you know what a bad summer we have had. But I am getting along fine, and if I had another machine I could keep both of them busy. I have more work now than I can do, and, another thing, I think the Buckeye Traction Ditcher Company used me first rate."—EDWARD YOSTER.

You Can Do as Well

Buckeye Ditchers are so simply constructed that anyone can quickly and easily learn to operate them. Write for free book of facts telling what others have done and earned with Buckeyes. Describe your soil conditions and size ditches you wish to cut. We will gladly outline the machine best adapted. This advice and assistance is free.

Fat in Cookery.

Food materials differ in price with place and with season, and when a housekeeper wishes to follow a recipe she often finds that some of the ingredients called for are either too expensive, or are very difficult to obtain. If she understands the composition of foods, she can often, under these circumstances, substitute some other material with good results. In order to do this, the housekeeper needs at least a general knowledge of the composition and properties of foods and is greatly helped by experience. In the main, it is knowledge of foods and experience which free the cook from slavery to a recipe.

Experts in home economics at the United States Department of Agriculture have studied the matter recently with respect, especially, to the uses of fat in cookery.

For example, chicken fat or sour cream can often be substituted for part or all of the butter in cake making, but if this is to be done successfully the cook must know how much of either one it takes to supply the fat contained in the amount of butter for which the recipe calls. Cream contains more water than butter does, and rendered chicken fat usually far less, because it has been heated and the water which it originally contained driven off.

Egg yolks, which are rich in fat and which are often left over from cake making, may be used to enrich soups, or may be combined with milk to make custards, which resemble the cream in composition, and can be used as cream is on desserts. Cheese is often added to soups or milk sauces to flavor them and also to make them richer in protein, but one should remember that it adds greatly to the fat also, and so the amount of butter should either be lessened or left out entirely, according to the amount of cheese used. It is convenient in these cases to know just how much fat is contained in an egg yolk or in a given amount of cheese.

Sometimes chopped nuts, which contain much fat, are added to recipes which did not originally call for them, with the idea of making the dish more appetizing. In this case also the nut fat should be taken into account, and the amount of butter or other shortening should be reduced accordingly; otherwise the dish is almost sure to be overfat.

It is easy to find out from bulletins published by the United States Department of Agriculture the percentage of fat in different food materials, and one can then compute the amount in a given weight of milk, cream, cheese, and so on. But the home cook does not usually weigh all her food materials, and still less does she like to do problems in arithmetic as a part of her baking. She measures her materials, using level teaspoonfuls, tablespoonfuls, and cupfuls, and uses them as her recipe or her general knowledge of cookery suggests. The more reliable data she has, the better results can she count on.

With these facts in mind, the table given above has been made, which shows in housekeepers' terms the volume of fat in several commonly used food materials. An illustration of how the facts in the table may be used is given below. The proportions for a good cup cake, in which fat is supplied by butter and milk, are as follows:

Two-thirds cup butter, two cups sugar, four eggs, one cup milk (containing two teaspoons fat), three and one-fourth cups flour, four teaspoons baking powder.

In this recipe a cupful of sour cream (18 per cent) can be substituted for the cupful of milk. It contains, as the table shows, a little more than two tablespoonfuls more fat and, of course, correspondingly less water. The two tablespoonfuls of fat can be taken from the butter, which will reduce the butter to one-half cupful, and two tablespoonfuls of water can be added. The regular allowance of soda, one-half teaspoonful for a cupful of sour milk or cream, should be used and the baking powder reduced to three and one-half teaspoonfuls.

This illustration will serve to show how a knowledge of facts will help housekeepers to use fats economically in cookery.

AMOUNT OF FAT IN VARIOUS COMMON FOOD MATERIALS.*

Food material	Quantity	Fat content.
Whole milk	1 cup	About 2 level teaspoons
Ordinary cream (18 per cent)	1 cup	About 3 level tablespoons
Double or whipping cream (40 per cent)	1 cup	About 6 level tablespoons
Butter	1 cup	14 level tablespoons
English walnut meats (finely chopped)	1 cup, or 8 oz.	Nearly two-thirds cup
Peanuts (finely chopped)	1 cup, or 8 oz.	A little more than 1-3 cup
Chocolate	1 sq. or 1 oz.	1 scant tablespoon
Cheese (grated)	1 cup or 4 oz.	2½ level tablespoons
Egg	1	A little more than 1 level teaspoon
Egg yolk	1	A little more than 1 level teaspoon
Egg white	1	Only a trace
Egg yolks	1 cup	About 5 level tablespoons
Egg whites	1 cup	One-fourth level teaspoon
Vegetable oil or lard or drippings from which all water has been driven off by heat	1 cup	1 cup

*In making these estimates it is assumed that three level teasp ns make one level tablespoon, and sixteen level tablespoons one cup.

Tatted Ecru Trimming.

To the Editor:—I am sending you a sample of tatted trimming that I think is very pretty for use on plaid ginghams. It is easy to make, and I think some of your readers may like it.

Only half the pattern is made, as many yards as is needed, and then tat back on the strip.

With the shuttle thread make ring of 6 d. s. 1 p. 6 d. s. close. Join spool thread and chain 4 d. s, 3 p.'s separated by 2 d. s. With spool thread make small ring 6 d. s., join to p. of other ring d. s., close. Leave no thread. Make ring of 6 d. s., 1 p. 6 d. s., close. Shuttle thread made 4 d. s., 3 p.'s separated by 2 d. s., 4 d. s. Shuttle thread make ring of 6 d. s., join to last ring 6 d. s. and close. Repeat until you have as many yards as desired, then turn and do the same back, so there are four rings in the same picot. Mother D.

TRIMMING FOR GINGHAMS, TO BE USED AS INSERTION.

Recipes.

Baked Indian Pudding With Sweet Apples.—Mix four tablespoonfuls of Indian meal with a cup of cold water and stir into two cups of milk scalded over hot water; continue to stir until the mixture thickens, then add one cup of molasses, two eggs beaten light, half a teaspoonful of salt, half a teaspoonful of ginger and a teaspoonful of cinnamon. In a buttered pudding dish lay four sweet apples, pared, cut in quarters and cored; over these pour the hot mixture and let bake in a moderate oven half an hour, then pour on half a cup of cold milk and bake without stirring two hours. Serve with cream or hard sauce.

Chicken Soup.—Simmer one quart of chicken broth, the bones of the chicken, two tablespoonfuls each of onion and carrot, a sprig of parsley, a stalk of celery, half a teaspoonful of sweet herbs and a teaspoonful of salt one hour. Strain into a double boiler; add two cups of milk and when scalded, two tablespoonfuls of tapioca; stir occasionally until the tapioca is transparent. Beat the yolks of two eggs, add half a cup of cream and stir into the soup. Beat the whites of the eggs with a few grains of salt until light; put, by spoonfuls, into hot water, dip the water over the egg, and remove with a skimmer, one portion to each cup of soup.

Delicious Hot Cakes.—One cup graham flour, two cups wheat flour, two level teaspoonfuls soda, one teaspoonful salt, enough buttermilk to make batter. Sour milk or sour cream may be used with equally good results.—Mrs. P. J. A.

Buttermilk Bran Muffins.—Three-quarters pint buttermilk, two cups bran, one cup white flour, one teaspoonful salt, one teaspoonful soda, one-quarter cup molasses, one-half cup of dates. Stir the bran and white flour into the buttermilk, add salt, soda, molasses and finely chopped dates, which have been thoroughly dredged with flour. Bake forty-five minutes in greased muffin rings or gem pans. Dissolve soda in a tablespoonful of hot water.

Spanish Cream.—Dissolve one-half a box of granulated gelatine in one pint of milk. When thoroughly dissolved add the yolks of two eggs beaten with one-half cup of sugar. When it comes just to a boil, remove from the fire, and add the whites of the eggs beaten to a froth. Flavor to taste. Turn into a mold and set in a cool place. Serve with cream.

Christmas Ladder Instead of Tree

Dear Young Folks:—I live on a 200-acre farm. I have one brother and three sisters. My brother and I go to school. We take our sleds and have many a good time sliding down hill. There are twenty-one pupils at our school. I am ten years old and am in the fourth grade. There are seven pupils in my grade.

We had a Christmas ladder at our school and we thought it was prettier than a tree. We had two dialogues and six songs. My brother and I sang one song and we also spoke a piece. We had a candy sale at Christmas and made over $19. —Ruth.

Lines to Be Remembered.

Oh who will walk a mile with me
Along life's merry way?
A comrade blithe and full of glee,
Who dares to laugh out loud and free,
And let his frolic fancy play,
Like a happy child, through the flowers gay
That fill the field and fringe the way
Where he walks a mile with me.
—Henry Van Dyke.

Bought Her Own Piano.

Dear Young Folks:—Have you forgotten me? I wrote a long time ago and now I am writing again. You will remember me as the girl who was going to grow potatoes and earn her own piano.

Well, I have my piano now and I do not think you could find a happier girl. The piano is finished in mahogany and is very beautiful.

I have won a lot of prizes with my potatoes at county and state fairs and potato shows. I sold some potatoes to a man in St. Louis, some to a man in Madison, and some were to go on a demonstration train through Iowa. I have sent my story to the state club leader of my state, so some of you may see it in print.

I would certainly like to read the stories of some of the young folks who are growing potatoes or something else and see how much good it did them.

I still have some money in the bank which I am saving for use when I go to a conservatory of music.

Probably some of the girls can play these pieces: "Dying Poet," "Mis-

souri Waltz," "Woodland Echoes," "Humoresque," "First Heart Throbs," "Perfect Day" and "Mother Machree." I have all of them and many more.

The last time I wrote my letter was not printed for a long time, but one day, to my delight, I saw it in print. I wonder if all who write have that delightful feeling.

I am thirteen years old and in the eighth grade now. I take arithmetic, United States history, literature, agriculture, grammar, spelling, penmanship and geography. I did take civil government, but have finished that and after three months of geography will take physiology. The eighth grade is the hardest of all grades. Every night I take books home to study.

Florence.

International Sunday School Lesson.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for January 28, 1917.

Reverence of Jesus For His Followers' House.

LESSON TEXT—John 2:13-22.

GOLDEN TEXT—My house shall be called a house of prayer.—Matt. 21:13.

Skipping the details of geneology, birth and boyhood, John plunges into the work and ministry of our Lord. Our previous lessons have taken up the matter of his eternal Godhead, the word made flesh, the witness of John, Jesus and John the Baptist, his first disciples and the wedding at Canaan. Some of these events have been skipped over without much consideration, yet the teacher should review them briefly. The wedding at Canaan probably occurred in March A. D. 27, and the events of this lesson in April of the Passover week of that year, both events occurring early in the first year of the ministry of our Lord. Jesus went to the wedding, for he had many things to teach by means of it. The story is familiar, and yet God is performing the same miracle every year except by somewhat slower process. John lays strong emphasis upon the "signs" which Jesus performed as evidence of his office. This miracle is an allegory. It also throws light upon Jesus' relation to the home.

I. Jesus Applies the Word of God (vv. 12-17). As the "Son of the Law" Jesus observed all of its requirements and, therefore, went to the Passover (Deut. 16:16; Luke 2:41). We would suggest the reading of Edersheim's "Life of Christ" at this point, especially his description of the feast. Jesus found much of interest, and also saw that which filled his spirit with indignation as he entered the temple (v. 14). Great numbers of oxen and sheep and doves were required for the sacrifices. Every family must bring for sacrifice a lamb, the sacrifices being lain in the inner court near the great altar. Those living nearer the city could bring their own sacrifices, but those who came from far distant points found it more convenient to purchase their sacrifices nearer the temple. Thus a business had grown up within the courts, which gave rise to an immense amount of covetousness and selfishness. The yearly tax due from every Jew could not be received except in the native coin; hence the money changers within the courts. The result was that the temple had become a "den of thieves" (Mark 11:17). This had undermined the power of religion, and turned men away from the truth. This place, made to be a house of prayer (Jer. 7:11; Isa. 56:7) had become a vanity fair; a show, and the very object of the temple was sacrificed to the greed of gain. The defense often made in our day, of buying and selling in the house of God that it has to do with the cause of worship will not bear scrutiny in the light of this passage. Into these surroundings this young reformer enters, and places his finger upon the heart of the matter when he quotes the scripture. The reason of his action was what the scripture said about the house of God. Present day followers of Jesus can learn a lesson from these words.

II. Jesus Fulfills the Word of God (vv. 18-22). Jesus spake as one having authority, and these merchants knew they were in the wrong. He embodied in himself, as prophet, the moral sentiment of the nation, and exerted his authority. It looked like high-handed usurpation unless Jesus were a prophet sent from God; therefore, the demand for his credentials (v. 18). Jesus gave a sign, a sign which they did not understand at the time (v. 19; Matt. 12:38-40; 16:1-4). The resurrection of Jesus is God's seal to all of the claims of Jesus. He also speaks of his body as a symbol and type of what is to take place in their national temple, an event which occurred some forty years later, though they at the time did not understand it. Jesus foresaw that these leaders would destroy his body on the cross, and that for the same reason they were at the present time opposing him in what he had done. The Jews, thinking only of their temple, in whose courts they were standing, referred to the time spent in the erection of the building (v. 20), and thought that their argument was invincible, but they did not know what was to take place. Not even the disciples of Jesus understood his words at the time, but after his resurrection they remembered them and their fulfillment. The death and resurrection of Jesus was in accordance with the word of God. His whole life, birth and works can be traced in the Old Testament in type and prophecy.

Our Fashion Department.

All Patterns, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want, and inclose 10c for each number. We agree to fill all orders promptly and guarantee safe delivery.

Catalog of Fall and Winter Fashions

P&O

LIGHT DRAFT PLOWS

Built for the Field Test.

Three-Quarters of a Century of "Knowing How" Hammered Into Every One of Them.

The product of the Parlin & Orendorff Co. has always been noted for simplicity of construction, great strength and ease of operation. It was upon such a basis that the founders of this business made their implements, established their reputation, and built their factory. It is upon the same foundation that the business has been carried on to this day, and in 1917 we celebrate our Diamond Jubilee; 75 years of practical experience gained through constantly striving to provide for the exacting requirements of three generations of American farmers.

For an even three-quarters of a century we have met the demand, and today we operate the largest and oldest permanently established plow factory in the whole world. "It's the way we build them."

P&O

Light Draft Plows, Harrows, Planters and Cultivators are made in all types and sizes, to meet the conditions in all sections, and are Backed by an Unqualified Guarantee.

We also make the most complete line of Traction Engine Plows produced, and we have a special catalog devoted to these famous plows.

The P&O Little Genius Engine Gang Plow

was the most popular plow shown at all points on the 1916 National Tractor Demonstration.

We will send P & O Catalogs to any address. While P & O Implements are sold only through established implement dealers, we welcome correspondence from farmers in all sections.

Ask Your Dealer or Write Us.

TOLD IN THE HILLS

By Marah Ellis Ryan

Author of "That Girl Montana," "The Bondwoman," "My Quaker Maid," Etc., Etc.

(Copyright Rand McNally & Co.)

PART IV.---One Squaw Man.

CHAPTER III—Continued.

"The Sqauw Who Rides."

"Good gracious! Do you folks go to bed with the sun? I have a magazine for him, but he can wait for it, then, until tomorrow. Tell him I will expect him over."

"Yes, Miss."

Just then from along the avenue sauntered a soldierly figure, who drew near at the sound of voices.

"There comes Sergeant Kelp," remarked the sentry. "He's on night duty in Kennedy's place."

Instantly the girl turned to the officer in charge.

"Well, I'm glad to find someone up and awake," she said, leaning over to shake hands with him. "It helps to keep me from seeming altogether a night-prowler. I came over to get the returns, if there were any. The folks are getting anxious at the ranch."

"Naturally," answered the young fellow. "I would have called this evening, but am on duty. Don't let the ladies worry if you can help it. We are likely to hear from the men before morning. Every scout we had went with them, and without horses we can't do much but just stay here and wait; all the boys find it mighty hard work, too."

"You remind me of half my mission, Sergeant, when you speak of your scouts. I brought over some mail, and everyone I wanted to see is either away or asleep. How about your chief of scouts—is he asleep, too?"

It seemed to her that her heart ceased beating, the wind ceased blowing, and the stars ceased twinkling above the snow, as she waited for his disgusted reply.

"No; not by a good deal. I never saw such a crank as that fellow! When everything was smooth sailing, that man would skulk around camp without a work to speak to anyone, the surliest white man I want to see; but now that he's jailed for horse stealing, tied up and watched in the shack, I'm blest if he doesn't put in the time singing. Yes, he does; been at it ever since taps. I threatened to have him gagged if he disturbed the boys; but they say he don't. Roberts is the only one who has to listen to it; says he never heard so many Indian songs in his life. But it's a mighty queer streak of luck for a man to be musical over."

Rachel laughed, and agreed. "I have a letter for him, too," she added. "Look, here; I'd like to take it to him myself, and get to hear some of those songs. Can I? I know it's rather late, but if he is awake, it doesn't matter, I suppose; or is no one allowed to see him?"

"Indians only are tabooed, but none of them have shown up, not even his runner, and I guess you can speak to him if you want to; it isn't a thing most ladies would like to do, though," he added.

"I suppose not," she said good-humoredly; "but then, I've known the man for something over a year, and am not at all afraid—in fact, I'd rather like to do it and have something to horrify the ladies at the ranch with. Think of it! An interview with a horse thief—perhaps a duet with him all alone in the middle of the night. Oh, yes, that's too good to miss. But I must hurry up, or they will be sending someone after me."

At the door of the shack, however, she paused a moment in what might be trepidation, her hand laid hesitatingly on the saddle, as if in doubt whether to remount or enter the shanty, from which she could hear the low refrain of a song of their cultus corrie —"Tsolo, tso-lo!"

"The guard will not leave the door?" she whispered; and Sergeant Kelp concluded that, after all, she was pretending to greater nerve than she possessed.

"Never fear," he returned; "I will call him out to hold your horse, and he won't stir from the door. By the way, I'll have someone to see you home when you're ready to go. Goodnight."

Then the guard was called out, and a moment later the visitor slipped in, the prisoner never turning his head or noticing the exchange until she spoke.

"Jack!"

He turned quickly enough.

"My gracious, girl! What are you doing here?"

She thought of the ears, possibly listening ears, on the other side of the door, and her tone was guarded and careless, as it had been with the Sergeant, as she laughed and answered in Chinook:

"To pay a visit; what else?"

She noticed with exultation that it was only rope he was tied with—his hands and his feet, as he sat on the bunk—a plaited rope of rawhide; strong enough when strengthened by a guard opposite and a loaded gun; but without the guard and with a keen knife! She checked him in the midst of a passionate protest against her coming.

"I am here, so that fact is settled," she said quietly. "I didn't come for fun, and we haven't any time to lose. I brought you a letter; it is in this," she said.

"You have seen Kalitan?"

He took from her the rubber case and extracted the letter from it, but scarcely noticed it, his eyes were turned so anxiously to her face.

"Yes; and you had better read it," she advised, walking back to the door.

"Rachel—"

"Read it; let them see you!" and she opened the door wide and stepped out as if to make sure of the guard's presence.

"It's all right, Miss, I'm here," he whispered, looking past her to the prisoner opening the letter and throwing the envelope in the fire. "I'll not stir from here with the beast. Don't be uneasy;" and then she turned back and closed the door. She had seen he was not close enough to listen.

"Jack," she said, coming back to him, "you must get out of this. Mowitza is at the door; I have brought the things you will need. Can you make a dash for it and get away?"

He looked at her in utter amazement.

"I didn't know it until tonight," she continued; "this is your chance, before the others get back—if they ever do get back! God help them!"

"What do you mean? Where are they?" And his hand, tied as it was, caught her own quickly.

"They are in a death trap, in that gully back of the Tamahnous ground. You know where—right over the peak from the old mine. They've been there since dark, hedged in by the Kootenais, who are only waiting for daylight to come. Heaven help our men when it does come!"

"The Kootenais? It can't be them. They are not hostile."

"Not yesterday," she agreed bitterly, "but they are today. They sent a messenger of good will to camp this morning, the grandson of Grey Eagle. He was shot down, almost in sight of camp, by one of the soldiers, and the braves he had brought, the best in the tribe, attempted a rescue. Our cavalry pursued them, and were led into that ravine. The Indians knew the ground, and our men didn't. At the end of the narrow pass, the reds rolled boulders down the mountain and closed it up, and then cut off retreat; and there they are, waiting for daylight or starvation—God knows what!"

"Who told you this?"

"Kalitan; he met an Indian trapper who had passed the gulch but a little while before. He came directly to me. The whites here blame you for helping the trouble—the beginning it, the—"

"You mean the horse stealing?" he said, looking at her curiously.

The Things That You Want the Most

A Wonderful Collection of Magnificent Premiums

Annual Premium List of The People's Home Journal

This Book Tells You How To Get Them

IS it not a fact that the things you want the most seem the hardest to get? Have you wished and waited, oh, so long, for some little luxury that you wanted very much, yet hesitated to buy? A tasteful set of Rogers Silver Ware for your table? Or a pretty brooch; a nice book, a pair of gloves; a shopping bag, or any one of a hundred other nice things that you did not wish to spend money for?

You Can Get What You Want Without Cost

Do not hesitate another moment. Send right away for the book that will tell you how to get the things that you want the most without a cent of expense to you. THE PEOPLE'S HOME JOURNAL premium plan will enable any person to obtain innumerable beautiful and useful articles without cost. By this plan can be obtained wearing apparel, household articles, jewelry and the many other things of practical and ornamental utility that you so frequently require for yourself or family.

Thousands Of Beautiful and Useful Presents Given Away

The character of the articles that we are distributing is attractively varied, and in the assortment there is something that will appeal to everyone. Among other things are.

Bound Books	Pillow Shams
Bracelets	Scarfs
Waist Sets	Shawls
Towels	Centerpieces
Scissors	Toilet Sets
Fancywork Outfits	Bed Spreads
Birthstone Rings	Pocket Books
Silver Thimble	Salt Shakers
Aprons	Lace Curtains
Locket and Chain	Gloves
Dinner Sets	Leather Bags
Gold Clocks	Food Chopper
Dressing Sets	Game Boards
Pillow Slips	Dolls
Tea Spoons	Handkerchiefs
Birth Spoons	Petticoats
Rugs	Teddy Bears
Glassware	Novels

and many other nice things for the home and family.

Sent Free Upon Request

This comprehensive 44 page book, illustrating and describing hundreds of attractive and valuable articles, all of which can be obtained without one cent of expense, will be sent free to any reader of this paper upon request. Our premium plan offers an unusual opportunity to those of our friends who are interested in obtaining, without cost, beautiful and useful things for the home and for personal adornment. The book will tell you exactly what to do to obtain the premiums. Send a post card to-day asking for a free copy of this fine illustrated catalogue, showing all the beautiful things we are giving away.

In and Around Wisconsin.

(Continued form page 13.)

vember, 24½ cents; December, 22¾ cents.

Steele county, Minnesota, is to have a county agent financed by the Journal-Chronicle, a very live and popular newspaper. This is a new wrinkle. The publisher of the paper expects to increase his business among farmers and also to get a larger advertising patronage from the rural districts.

The Wisconsin Farmer has a letter from a laundryman, three years with one of the large state institutions of Wisconsin, who is anxious to communicate with any creamery manager who thinks of installing a co-operative laundry in connection with his business. If this notice attracts the attention of any creamery man so interested, please communicate with us and we will put you in touch with the laundryman referred to.

The Bloomer, Chippewa county, creamery was recently sold for $35,000 to C. E. Blodgett, of Marshfield. Mr. Blodgett intends to erect a condensery plant at Bloomer at a cost of $150,000. The creamery plant will also be used. When completed and in operation the new plant will give employment to seventy-five to 100 people and will be a big addition to Bloomer. It will also be a stimulus to the dairy business in Barron county, a county which has already taken many state honors in the dairy line.

The annual meeting of the Welcome Holstein-Friesian Association in Outagamie county will be held January 20th, in the village of Bear Creek. This association has been doing splendid work and the stock in this section is of high standard. There is no doubt that the country is adapted to dairying and the raising of good stock for breeding purposes, and we expect to see this association branching out into larger fields in the near future. Mr. George Philippi, president of the association, is a well-known stockman who has been making a success in the Welcome district.

Southern breeders have been looking toward Wisconsin for live stock and quite a lively trade has grown up with Texas, Louisiana and even Florida. This is almost exclusively in dairy stock, though some pigs have been shipped. The Wisconsin Live Stock Breeders' Association has heard of a few shipments to the south which have been unsatisfactory. As a result of these shipments some southern states are demanding shipment of stock on approval. When buyers will ship almost a thousand miles they want nothing but the best and they are usually willing to pay for it. Wisconsin cannot afford to send any other than good stuff, as we have a reputation to maintain, to insure our share of the business in the future.

Considerable complaint is heard that farmers have stored a large part of the 1916 potato supply. It is even predicted that potatoes will go lower in price when the surplus stock is unloaded in the spring. As a matter of fact, it is highly improbable that there is any great amount of surplus stock on hand in this section of the country. Farmers are saving a considerable amount of stock for seed and they certainly cannot be blamed for that. The production in this state last year on potatoes was cut from a normal crop of 30,000,000 bushels or more to 13,000,000 bushels. This is where the real trouble arises. Furthermore, growers expect that next year will be a good price year and they are saving more than the usual amount for seed. It is our own view that no relief of any consequence need be expected by reason of Wisconsin potato growers unloading their hoardings later in the winter.

The month of February will be a very busy one for farmers' institute workers. W. C. Bradley will conduct the following: Bonduel, February 1st-2d; Juda, February 13th-15th; Albany, February 15th-16th; Windsor, February 20th-21st; Lodi, February 22d-23d; Dalton, February 27th-28th. David Imrie's institutes will be as follows: Big Suamizco, February 1st-2d; Rockfield, February 13th-14th; Edwards, February 15th-16th; Blackhawk, 20th-21st; Ithica, February 22d-23d; Elroy, February 27th-28th. H. D. Griswold's institute dates are: Schleisingerville, February 1st-2d; Neward, February 13th-14th; Magnolia, February 15th-16th; Wonewoc, February 20th-21st; Fairfield, February 22d-23d; Coon Valley, February 27th-28th. E. C. Jacob's institute dates are: Cedar Grove, February 1st-2d; Argyle, February 13th-14th; Fayette, February 15th-16th; Rockdale, February 20th-21st; Dousman, February 22d-23d; Sussex, February 22d-23d. W. H. Clark's institute dates are: Casco, February 1st-2d; Pilsen, February 13th-14th; Norman, February 15th-16th; Eagle, February 20th-21st; Genesee Depot, February 22d-23d; Watertown, February 27th-28th.

Get Good Ventilation Without Paying for Experiments

WE have removed many unsatisfactory ventilating systems which cost considerably more than the King System later installed in the same building. No one guaranteed these unsatisfactory systems. In most instances they were simply the result of somebody's untried idea.

When you get a King System you are sure of not only proper results, but getting results at lowest cost. We assume the responsibility—and protect you with a money-back guarantee. Write us and learn more about the service which you get with a

KING System of Ventilation

Each King System is formed from three units. The King Aerators on the roof form the first unit—the foul air flues and fresh air intakes form the other two. Our engineers study the conditions in your building and then plan the system with these units in the right sizes and right locations to accurately fit the conditions of your building.

Write for This Book

Written from our years of experience in solving thousands of ventilation problems in barns and creameries.

You can install the King System in any new or old barn. King Aerators can be installed with or without the system. Write for our book on barn ventilation.

King Ventilating Co.
1144 Cedar Street Owatonna, Minn.

Faultless Stump Puller

At a Special Low Price

The Faultless actually pulls from 50 to 100 percent more stumps at less cost of time and labor than any other stump puller. The cable winds onto the drum at the bottom all the time and the idle coils slide toward the top. This keeps the pull down and in a direct line with the anchor, and increases power. The machine cannot tip. Drum accommodates all of the cable, and it goes on only one layer deep. This prevents wear and relieves the strain on team and machine.

Machine and Cable are Guaranteed

against breakage for one year. Machines in use 15 years and longer are still in service.

Pull Stumps for 10 Days---Free

Clear from 10 to 50 acres. If not then satisfied that the Faultless Stump Puller will do more than we claim, return it to us at our expense.

The superiority of the Faultless is recognized by hundreds of farmers and railroads. It received highest awards at both the World's Fair at St. Louis and the Lewis & Clark Exposition at Portland in competitive demonstrations.

Write for special low price on our complete outfit, and our free book on clearing stump land.

Faultless Stump Puller Company, Dept. W. Cresco, Iowa.

Don't Forget Young's Great Poland Sale.

IF YOU miss the P. W. Young sale of big-type Poland Chinas at Prosper, Minn., Tuesday, February 6th, you'll miss one of the Poland events of the season. Mr. Young has the goods for this sale and they are safe in pig to three of the best herd boars in the Northwest. We will mention a few of the attractions that will be sold. Miss Wonder B. is a two year old by B. Wonder by A Wonder, dam by Long King's Best. This sow is big, has wonderful feet and bone, a great top line, in fact she is one of the best sows on the Young farm. The owner didn't intend to sell her, but another one didn't get with pig so he substituted this sow—a better one. She is bred for an early litter to Young's Big Joe. Big Lady A. is a daughter of the 1,100-pound Long Jumbo out of a daughter of the noted Grand Master. One fine yearling bred for early March to Orange Wonder. Edna Expansion traces to old Expansion and the Hadleys, bred for March to the Big Joe boar. Three choice gilts sired by a good son of Master's Giant and out of a Pawnee Defender dam will please you. Choice Expansion, the grandam of these gilts, is a litter sister to Meese's Choice, grand champion at Nebraska in 1915. Two more of the good gilts are sired by Orange Wonder out of a daughter of Big Knox, the sire of the Iowa and Wisconsin grand champion sow. Three summer yearlings are included. They are sired by Master's Giant Jr. and their dam is Miss Wonder B., included in the sale. Alma Wonder A., is sired by Orange Wonder out of a Master's Giant sow and bred to Young's Big Joe for an early March litter. This last mentioned is an ideal mating; Orange Wonder on Master's Giant sows, then bred to the Big Joe boar. It that doesn't produce good Poland Chinas, we are at a loss to know what cross would be desirable. Wisconsin breeders can well afford to attend this sale and secure some of this breeding. No herd has better blood lines or three better boars. Those that wish to attend the sale at Madison on the 7th can make good connections from Prosper and arrive at Madison early Wednesday morning. If it is impossible for you to attend send bids to T. P. Shreve who will represent this paper at the sale. If you haven't received a catalog, get one at once. After you see the illustrations you will want to attend. Please mention this publication when writing. See page 28.—Adv.

Some Chester White Sale.

THE only sale of Chester Whites so far scheduled for Wisconsin this season is the Cook-Scheibe-Vaughn sale to be held in Burlington Wis., on Monday, February 5th. This is one of the reasons why Chester White breeders should plan to attend this sale. Another reason is that you will find good animals when you get there. The offering in this sale is one of the best ever made in the state. There will be forty head of the top gilts from the herds of Cook Bros., W. C. Scheibe and W. W. Vaughn & Son. When you get the tops of these herds you have a mighty good looking lot of animals. An evidence of the quality of these herds is shown by the winnings they made at the leading fairs in Wisconsin the past season. Animals from these three herds won forty-seven first, thirty-five second, seventeen third and seven fourth prizes; two sweepstakes and two grand championships. The large number of first and second prizes and the small number of fourth prizes speaks volumes for the quality of the animals, as they competed with the best herds in many sections of the state, including the state fair. The breeding of the animals is, as you would expect, of the same high quality. There will be daughters of the following boars: Great Wonder 29377 and Eagle Chief, a son of the noted boar, White Eagle Chief, of Doolittle breeding; Wildwood Prince 2d 32953 by Wildwood Prince, grand champion at the 1915 Iowa State Fair; Highland John 28133, that won second at the Minnesota State Fair; Model Price 30329 by Scherer's noted herd sire, a son of the champion boar, Don Raymore; Right Kind 27479 by Elmo Jr., that won four grand champions including the Illinois State Fair. When writing kindly mention The Wisconsin Farmer. See page 25.—Adv.

Go to Janesville From Madison.

EVERY live Duroc Jersey breeder of the state should be at Madison, Wednesday, February 7th. The day following, there will be a Duroc Jersey sale at Janesville that all Duroc men should attend. E. H. Parker & Son, John L. Fisher and three other Duroc Jersey breeders of Rock county will contribute to this sale. This will be the first sale held in Rock county and those interested are sparing neither time nor money to make this sale a success. The individuals going into this sale will justify your attendance. Good sows and gilts bred to two of the best boars of the state will be offered for your approval on February 8th. The sale will be held in a heated building and the day will be well spent. Inasmuch as you are away from home attending Swine Week at Madison, one more day will make no material difference. The catalog contains the pedigrees of some of the most noted sires of the breed. Some of the best breeding to be found in the state can be found in the Duroc Jersey herds around Janesville. Write to P. V. Kuhn, Secy., Janesville, Wis., for a catalog and don't fail to mention The Wisconsin Farmer when writing. T. P. Shreve will represent this publication at the sale and buying instructions should be sent to him in care of the secretary. See this page.—Adv.

Some Great Polands to Be Sold at Lancaster.

DURING the past year a great deal has been written about Grant county, Wis., as the headquarters for Poland Chinas. This county has come into prominence very fast the past year, owing to the strong organization they have. In the first place, there are more good Poland China herds in Grant county than in any other county in Wisconsin, and when forty head of bred sows are drawn from these good herds for their sale, which will be held in Lancaster, February 13th, the public can rest assured that there will be a grand offering. We recently saw several of the sows and gilts that go in this sale and we will say that there will be gilts consigned to this sale, as good as will be sold this winter. Several of the gilts will weigh right at 400 pounds and are bred to excellent big-type boars. Big Ben H. is a big, long, high-backed boar sired by the noted Big Ben, out of Great Lady C Again, that goes back to that great brood sow, Great Lady C. This is one of the best young boars in Wisconsin. Another boar is Big Type Jim 2d, a spring boar that was a winner at Wisconsin, sired by Jim Crow by Crow's Kind, out of a Hadley-A Wonder dam. A boar that the big-type breeders will like is, Big Mint, one of the largest spring boars in the state of Wisconsin. Sired by Big Jumbo 2d. Several of the good gilts in the sale have been bred to this boar—make a note of this fact and look for them sale day. Some will be bred to Big Ben Jr., another son of the great breeding boar, Big Ben. A couple of the best gilts in the sale have been bred to Sunrise Price, a son of the good Smooth Price, well known to northern Poland China men. Now, anyone interested in good Poland Chinas should attend this sale, staged by the Grant County Poland China Breeders' Association. They have the goods and every breeder guarantees his sows to be in pig to the service given in the catalog. Some good yearlings will be sold and the spring gilts will appeal to the man that wants Polands better than his neighbor has. The catalogs are now ready and you should get one at once. Don't forget the date, Tuesday February 13th. E. W. Hendricks sells the following, attend both sales. Write to Burlie Dobson, secretary, Lancaster, Wis., for a catalog and please mention The Wisconsin Farmer. See page 39.—Adv.

Some Great Breeding at Kartman's.

THE fourth and last day of the Grant county Poland China sale circuit will be at Chris Kartman, Friday, February 16th, and it will be a "grand finale" for Chris is going to sell a bunch of Poland Chinas that he need not be ashamed of. In the first place this breeder is a critical buyer and when he buys a herd boar it must be a top notcher. Last summer he traveled through several states in search of a boar that he thought would be suitable to head his herd and he finally secured a son of the noted Fessy's Timm and this spring boar is the largest boar of his age that we have seen in Wisconsin. He is sure a 1,100-pound prospect. The breeding of this boar appears in the advertisement on page 24. Another boar that has been used heavily is Giant Wonder a 500-pound yearling. This boar won second at the Wisconsin State Fair and the general opinion was that he should have headed the class. He is a boar with scale, combined with great quality. The big noise, until he died, was Monster Big Bone, and many of the gilts in this sale are sired by this good boar. His sire, Black Big Bone, is the sire of Long Big Bone, the grand champion Poland China boar at the National Swine Show. There is not very much of this breeding in Wisconsin and it is very popular just at this time, owing to the fact that this strain has been winning at Iowa for the past three years. There are three outstanding gilts that will be sold sired by this boar out of a dam tracing to Big Bone. They have been bred for early farrow and are worth bidding on. You will realize the value of Monster Big Bone, as a sire, when you see his get and especially some of the fall sows that sell. The fact that some of the spring gilts will weigh right at 400 pounds goes to show that Mr. Kartman has the big kind that combine the easy feeding qualities. Plan to attend this sale. The day before, J. C. Hendricks sells at Hazel Green and you can make good connections to the Kartman sale on the day following. Write at once for the catalog and if you appreciate popular blood lines you can get your fill by reading this catalog. Don't forget to mention The Wisconsin Farmer when writing. Send bids to T. P. Shreve in care of Mr. Kartman.—Adv.

Percherons For Sale.

IT WILL soon be time to think about buying that stallion for your own use or to place on the stand. For those that are going to want a Percheron stallion, L. P. Martiny, Chippewa Falls, Wis., has a three year old that is a good one. He was first in class at the Northern Wisconsin Fair last fall, is a dark gray, will weigh right at 1,900 pounds with heavy bone and a draft conformation. An outstanding colt in every respect. Mr. Martiny also has a five-year-old black horse that will appeal to a horseman. He weighs about 1,900 pounds, is clean and sound and was used last season. These horses are broke to work and are nice to handle. Write for prices and further description. See page 27.—Adv.

John L. Fisher's Consignment to the Janesville Sale.

JOHN L. FISHER is one of the breeders that will consign to the Duroc Jersey sale to be held in Janesville, February 8th, the day following the Madison sale. Mr. Fisher will have some attractions in that sale. Among them will be the tried sow, A.'s Model a litter mate to Lee's Defender. She is a great brood sow. There will be a daughter of the great King the Col. An attraction will be Chief's Col. Duchess, a daughter of the noted sire and show boar, Chief's Col. Her dam was by The Professor, a son of Ohio Chief. Fisher will sell gilts out of daughters of Joe Orion 2d, Pal's Col. and Volunteer. The feature is the fact that they will be bred to King Defender, the 1,000-pound grand champion Duroc Jersey boar of Wisconsin. Keep your eye on this sale and in the meantime write to Mr. Fisher and have him send you one of the catalogs. E. H. Parker & Son will also consign some good sows to this sale, bred to a son of Orion Cherry King Jr. See this page.—Adv.

Schultz's Holstein Bulls.

SOME fine registered Holstein bulls out of large record A. R. O. cows are offered for sale by Ed M. Schultz, Hartford, Wis. These bulls are splendid young animals, from one to eleven months old. The lot includes a number of sons of King Artis Pontiac. Mr. Schultz's senior herd sire, which he recently sold to Nelson Bros., Stromsburg, Neb., who have one of the record

CONSIGNMENT SALE

TO BE HELD AT 7 P. M. AT

Madison, Wis., Wednesday, Feb. 7, '17

ABOUT 45 BIG-TYPE BRED SOWS AND GILTS

THIS will be the greatest variety of breeding ever placed before the buying public. There never was a greater lot of sows and gilts sired by and bred to as great a lot of famous boars as will be included in this offering. There will be tried sows, fall sows and an array of spring gilts that are hard to fault. A great many of them have been state fair winners and others trace back to the purple. The sale of Poland Chinas will be held on the University Farm at Madison, Wis., and will be held in the evening following a sale of Durocs which will be held in the afternoon. The Poland China sale will be conducted by Colonel Cottingham, assisted by Colonel Seely. Clerk, Burlie Dobson. Write for catalog and plan to be with us February 7th. Address

R. F. SMILEY, Pres., ALBANY, WIS. OR J. F. DILEY, Sec'y, RUSH LAKE, WIS.

herds of the stae. See Mr. Schultz's advertisement on page 31 and write to him for further particulars about these fine young bulls.—Adv.

E. W. Hendricks' Big-Type Poland Sale.

ONE can ride a long way and visit the good herds of big-type Poland Chinas and you will not find many herds better, and few the equal of the E. W. Hendricks' Poland Chinas at Hazel Green, Wis. E. W. comes from a "Poland China family," for his father was one of the oldest breeders in the Northwest. Mr. Hendricks held his first sale of bred sows last winter and sold a meritorious lot of big Polands and those that attended the sale last year will have some idea of the offering that will be sold February 14th, when we say that a better bunch will be sold this year. We have attended many sales of bred sows but very few of them contained thirty spring gilts the equal to those that will be sold on the above date. They represent the best blood lines known to the breed. They are big, yet have not been overdone by feeding. Some breeders still advocate the medium-type Poland, saying that the big types do not take on meat, or do not have quality until they are matured. If you will attend the Hendricks sale you will be convinced that one can raise the big ones and still retain the quality and feeding value. A great deal of the success of this herd is due to the senior herd boar, Black Jumbo—a boar that is very deep, with excellent feet and bone, a good head and ear and a great top. A boar with quality, yet one that could be made to weigh 1,100 pounds. The best gilts in the sale are sired by Black Jumbo. Those not sired by him have been bred to this boar. The Black Jumbo gilts have been bred to Model Major 2d. In our estimation the last mentioned boar is the largest boar of his age in the state two years old last April. A boar of great length, a "rainbow" back, heavy bone, good feet and pasterns and we believe he will cross well on Black Jumbo gilts. The entire offering has been bred to these two tried boars, sires that have proven their value in the breeding pen. Anyone wishing to improve his herd can find material in this sale. The catalog is very interesting and contains some great pedigrees. Write for one at once and please mention The Wisconsin Farmer. T. P. Shreve will represent this publication at the sale. See advertisement on page 27.—Adv.

Tell Them to Meet You at Madison, February 7th.

THE prospects now are for big doings in Madison, Wis., during swine week, and if you miss that you will miss one of the interesting events of the year. The Poland China sale that will be held in the evening of February 7th is going to be one of the features of the week. We have just been advised by Robt. Smiley who has been compiling the catalog, that he has received entries for fifty-three head of Poland Chinas which insures a great sale offering. The representative breeders of the state will have Polands in this sale and it will be a grand opportunity to inspect the entries from the various herds. We don't believe it necessary to go into detail about this sale, for in traveling over the country we find a great deal of interest being taken in this sale and we sincerely believe that all farmers and breeders interested in this good breed of swine are going to be on the job, February 7th to lend a hand and boost this good breed in Wisconsin. The catalogs are now ready for distribution and you can write any one of the following men, who have had this sale in charge: J. F. Diley, Rush Iake; Robt. Smiley, Albany, or Burlie Dobson, Lancaster. Be sure and attend this sale and bring one or more of your neighbors with you. You should attend in person, but if that is impossible send buying instructions to T. P. Shreve, care of Wisconsin Farmer or any of the above breeders. Write for one of the catalogs and mention The Wisconsin Farmer. See this page.—Adv.

Madson & Sons During Swine Week.

TELL them to meet you at Madison, Wis., during "Swine Week" February 5th to 7th. On the 6th, Madson & Sons, Poland China breeders of Madison, Wis., will sell forty head of bred sows and this will be a sale that all men interested in pure-bred swine should attend, and especially those that are followers of the Poland Chinas. Madson & Sons are too well known to Wisconsin breeders and farmers that they need very little introduction at this time. The offering that they will put up for your appraisal on the above date is the best that ever came from this good herd. There will be five tried yearlings and three fall yearlings. By the way, the junior champion at Milwaukee will be sold and she is some sow and bred for an early litter. The thirty-five gilts that go into this sale are real toppers, that have size and quality and are bred to boars of the most noted big-type breeding, which was explained in our previous issue. A yearling sow that is an attraction is sired by Hidestretcher, a boar that has been producing winners in Minnesota for several years. Now you will not be disappointed with this sale offering—they will offer you more size than they ever had before and are bred to boars that are sired by 1,000-pound boars. No doubt Madsons will have their boars on exhibition and we are anvious for you to see these young boars, for we believe they have a couple that will be heard from. Get their catalog at once and study the line of breeding that will go to make up this sale offering. Address M. Madson & Sons Madison, Wis., and please mention The Wisconsin Farmer. See page 22.—Adv.

The Durocs at Madison, February 7th.

IT would be difficult to find a better offering of Duroc Jerseys than will be sold at Madison, February 7th, during swine week, and if you want to boost the swine game in Wisconsin be in Madison that week, If you want to boost the Durocs be at the sale in the afternoon of February 7th. It will not be necessary for the breeders that want the best to go out of their own state to buy Duroc sows, for there will be sows in this sale as good as will be sold in any sale of the winter. They are well bred and individually, some of them are good enough to show next fall. Now it's up to the Duroc breeders of the state to make this sale a success. There must be more co-operation among the breeders of Durocs in the state of Wisconsin, before they are going to get very far. There is too much "knocking" going on between breeders, for the good of the breed, in the state. It's time to "bury the hammer" and all pull together for the success of this sale. There never was a time when good sows were more in demand. The breeders of Wisconsin have the goods, so put your shoulder to the wheel and boost from now until after the sale, then you will have the habit and it will be easier for you. Remember, the Durocs will be sold in the afternoon and the Polands at night. If you haven't received your catalog, write to J. D. Gant, Delavan, Wis., he has one for you, and he has been the "man behind the gun" getting up this sale. If you want to send bids, mail your instructions to T. P. Shreve in care of The Wisconsin Farmer. When writing for catalog please mention The Wisconsin Farmer. See page 26.—Adv.

Do You Want Holstein Heifers.

WE HAVE just had a letter from the Silver Spring Farm Co., Eau Claire, Wis., sending in change of copy for their advertisement. They advise that most of the bulls are sold and at the present time they offer a few heifers. These heifers are out of dams with large productions, in fact their average for the past year—three months dry—was 9,120 pounds of milk. The dams of the heifers offered have A. R. O. records. We are glad to recommend this herd of cattle, for we know that the owners will sell you Holsteins that will make good. Notice their advertisement on page 30 and when writing please mention The Wisconsin Farmer. Adv.

Good Demand For Bred Durocs.

MICHAEL STOEHR, Viroqua, Wis., one of the old-time breeders of that section advises that he has had a good demand for bred Duroc Jerseys, He says he only has ten of the best ones

POLAND CHINA SWINE.

OPPORTUNITY

OFFERING March gilts out of my big sows, bred for March and April farrow. Sired by JIM CROW, the sire of my WINNERS. At Cassville, Wisconsin, Friday, Feb. 16, '17

Poland Chinas

31 Gilts, 5 Fall Sows, 3 Tried Sows

at Wis., Timm Wonder by Fessy's Timm, dam by A Wonder. Omaha grand champion. Bred to Giant Wonder, 2d-prize boar at Wis., Timm Wonder by Fessy's Timm, dam by A Wonder.

Notice the Popular Blood Lines

MOST of the spring gilts are by **Monster Big Bone,** a son of Black Big Bone, the sire of Lone Big Bone, the grand champion at Omaha. Some by **King Joseph,** he by Big Joe, others by **Big Crushader 2d.** One tried sow by **Big Ben,** one by **Big Orange,** one sow by son of **Mouw's Jumbo.**

Bred to Excellent Boars

Timm Wonder is the largest spring boar in the state. Sired by Fessy's Timm, junior champion at Neb., by Big Timm, grand champion at Neb. Dam by A Wonder. **Giant Wonder** was the 2d-prize under-year boar at Wisconsin State Fair, 1916. He combines the blood of Heavy Bone, Chief Price, A Wonder and Giantess. Will show you gilts weighing 400—fall yearlings weighing over 500. **You get individuality and breeding combined.** Cassville is on the Burlington between East Dubuque and Prairie du Chien, in Grant county. If you can't attend, let Shreve buy a sow for you; I'll guarantee his buy. Write at once for one of the catalogs and mention The Wisconsin Farmer. Col. W. H. Cooper, auctioneer. T. P. Shreve, field man. Address

Chris Kartman - - - - Cassville, Wisconsin

This sale follows J. C. Hendricks, Hazel Green. Good connection.

left. They are well bred and have been well grown and if you are going to want a few gilts bred for early farrow, write Mr. Stoehr for description of what he has. His advertisement appears on page 26.—Adv.

The West Demanding Short-horns.

NEVER in the history of the Short-horn breeding business has there been such a general demand through the West for Short-horn breeding cattle. Buyers from California, Washington, Oregon, Utah, Montana, in fa t all of the western states have had representatives through the central states in quest of breeding stock during the past year and the demand is on the increase. A good many western ranchmen and breeders have availed themselves of the field services provided by the American Short-horn Breeders' Association, Chicago, and have obtained their supply of cattle through the representatives of the association. The demand is for better standards and the success of the sales held at Portland and elsewhere clearly demonstrates the call for Short-horn breeding stock throughout the mountain and coast states. The moving picture film showing all of the Short-horn winners at the recent International Exposition, Chicago, is being displayed in the picture houses in various parts of the country. It is a remarkable film and has created unusual interest wherever shown. It conveys a definite idea of the type that is held in favor by skilled judges in the show ring. It has an informing and instructive value.—Adv.

Martiny's Poland Bargains.

JUST at the present time L. P. Martiny, Chippewa Falls, one of the leading Poland China breeders of Wisconsin, is offering March and April gilts bred for April farrow. These gilts are sired by Chief Price, the first-prize senior yearling boar at Milwaukee last fall and Select Major 2d the first-prize junior at the same fair. The gilts have been bred so as to farrow in April. They are in pig to Golden Gate Giant a good son of the noted Goldengate King and to Long Black Jumbo a Poland China boar that will be heard from next fall. Mr. Martiny has a good herd of this breed and he will quote you prices on these good spring gilts, that will appeal to you. Write for details and mention this publication. See page 23.—Adv.

Dunbar's Dispersion Sale.

BUYERS in attendance at the dispersion sale to be held on January 30th, of the Oak Lodge Holstein-Friesian cattle owned by Harry D. Dunbar at Elkhorn, Wis., will have an opportunity to secure some of the best offerings made in a public sale in Wisconsin, cattle with both show ring and A. R. O. records at your own price. Knight Errant Queen, a big, square show cow with a seven-day and a yearly record, and her four daughters are in the lot. In the fair circuit in 1916 these cows took eight firsts, eight seconds, two thirds and two fourths at five fairs. Six yearly record cows, five bulls and nine heifers from yearly record dams are in the herd which will be dispersed. Read Mr. Dunbar's advertisement on page 25 and write him for catalog mentioning that you saw his advertisement in The Wisconsin Farmer.—Adv.

Kirkpatrick's Fine Stock.

KIRKPATRICK BROS., Reedsburg, Wis., have an unusually fine lot of live stock for sale this year. They have been building up their Holstein herd for ten years adding a few good cows each year, so that they now have a herd of sixty head, of which twenty-three have A. R. O. records. They have been using the best sires obtainable, testing every year and exhibiting at fairs with excellent results. Kirkpatrick Brothers also have a fine herd of Chester White swine. Read their advertisement on page 30 and write them for further particulars about their Holsteins and Chester Whites.—Adv.

Hart Bros.' Stallions.

ON page 25 Hart Bros., Osceola, Iowa, start their Percheron and Belgian advertisement and they are now offering some splendid stallions and mares for sale. They are now in position to offer you stallions from yearlings to matured horses and some good mares. They have both imported and home-bred. They now have the best bunch of stallions and mares that have ever been quartered in their barns. It will pay you to stop off at Osceola and see these horses. Their barns are located just one block from the C., B. & Q. depot. When writing Hart Bros. kindly mention this paper.—Adv.

THIS is our last opportunity to call your attention to the Duroc bred-sow sale to be held at Alexandria, Neb., on January 31st by J. H. Proett & Son and H. J. Nachtigall & Son. The attraction of the sale is the large number of sows going in bred to Big Lincoln Valley Chief, the Ohio Chief bred boar doing service in the herds. He is a great boar himself and his dam is Missouri Lady, one of the most valuable breeding sows, of the breed. Outstanding sows by Col. Sensation, King's Col., May Watt's Model, Kelley's Defender, King Illuminator, King the Col. and many others of such good breeding. Big Lincoln Valley Chief is a real 1,000-pound boar and you will be pleased with his get. Make your arrangements to attend the sale and buy some of the choice sows selling. They will add prestige to your herd and are the kind you can sell. Address J. H. Proett & Son, or H. J. Nachtigall & Son, Alexandria, Neb.—Adv.

Write to W. C. Scheibe, Burlington, for catalog. Mention The Wisconsin Farmer when writing.

UPPER WISCONSIN

Raising Swine up North.

Lawmakers and lobby interests are not the only ones with whom the pork barrel is a vital question. Settlers in northern Wisconsin should find swine raising highly profitable, both as a means of furnishing a home meat supply, and for commercial purposes.

Farmers of foreign birth, who are helping to develop the resources of the empire in north Wisconsin counties, are especially interested in pork production, which works in splendidly with general farming and with dairying as well. As the corn belt is pushed farther north, so will the advantages in pork production become more firmly established.

There are plenty of examples at hand to show that immigrants can succeed in this line of animal industry. One of the most inspiring careers to encourage the farmer of foreign parentage is afforded by the accomplishments of Mace Madson, a Dane county hogman, who has attained independence and a wide reputation through careful breeding and wise management of swine.

Coming to this country in 1872, unacquainted with the language or customs of his adopted land, and without funds, he began work as a hired hand on a Dane county farm. During ten years devoted to serving his farm apprenticeship, Mr. Madson saved money with which to start a business of his own. When he finally got his start, grade hogs started with him, and have been gradually improved, until since 1905 he has had nothing but pure stock on his farm.

Industry, brains and perseverance have enabled Mr. Madson to establish a herd that has won enviable prizes at many state fairs and national shows. What he has done other farmers of foreign birth, who are located on good land, and have native ability and an inclination to learn improved methods, can accomplish fully as well.

The ins and outs of the swine business will receive careful consideration at the first state swine conference, demonstration and public sales to be held at the College of Agriculture, Madison, during Farmers' Week, February 5th-10th.

Expenses for attendance at this meeting include only car fare, board and lodging. All the programs and demonstrations, as well as the big swine exposition, are free.

Helps and hints to hog raisers, given by men who have devoted years in experience and experiment, will make the event worth much to the man who wants to specialize in pork production.

Some of the special speakers for this conference include George B. Van Norman, commission man, Chicago; James Fisher, Eastman, Wisconsin, a practical hogman and market authority; L. P. Martiny, Chippewa Falls, who will discuss forage crops for swine; and F. B. Morrison, assistant director of the State Experiment Station, whose subject will be dairy by-products and forage-crop feed for hogs.

Live stock of all classes will have innings at the conference. Special days for beef, dairy cattle, sheep and horses have been arranged, with excellent speakers and demonstrators.

Other attractions of the week include a grain show of the State Experiment Association, a country life conference, a woman's course in home economics, a cow testers' meeting, a fruit school, and a course for creamery and cheese factory operators and managers.

Wisconsin leads all states in the number of silos, the latest estimate of the department of agriculture being 58,000. This is about one to every third farm, showing that a third of our farmers are alive on the value of silage for feed. But what about the other two-thirds. Still room for a good deal of missionary work.

Dairy Program, Farmers' Week.

There will be no let up on discussion of dairy topics at Farmers' Week, Madison, February 5th-10th, notwithstanding this week has been designated as Swine Week this year. The following special dairy program has been arranged:

Monday, February 5th—10 a. m. to 12 m., Conference in Dairy Building and Inspection of Equipment; 2 to 4 p. m., Starter Making at Dairy Building; 7:30 p. m., Address: Illustrated with motion pictures in the Auditorium, Agricultural Hall, Dr. A. S. Alexander.

Tuesday, February 6th—8 a. m., Inspection of Starters made previous day; 9 a. m., Buttermaking in Creamery from Sweet Cream, A. C. Dahlberg; 10 a. m., Conference on the Value of Skim Milk to Patrons, E. H. Farrington; 11 a. m., The Value of Milk in Nutrition, E. B. Hart; 2 to 4 p. m. Manufacture of casein and soft cheese from skim milk and buttermilk, J. L. Sammis; 6:30 p. m., Banquet for visitors.

Wednesday, February 7th—8 to 10 a. m., Milk Testing at the Cheese Factory, Cream Testing at the Creamery, E. H. Farrington; 10 a. m. to 12 m., Buttermaking in Creamery from Pasteurized Cream, A. C. Dahlberg, Cheesemaking in Cheese Factory from Pasteurized Milk, J. L. Sammis; Ice Cream Making in Factory from Pasteurized Cream, D. F. Mattson; 2 to 4 p. m., Butter and Cheese Scoring of entries received for the month, G. H. Benkendorf, Cheesemaking and Ice Cream Making continued from morning session, Testing Cheese Samples for Moisture, J. L. Sammis; 7:30 p. m., Swine Show in Stock Pavilion.

Thursday, February 8th—8 to 10 a. m., Care and Use of Farm Separators, G. H. Benkendorf; 10 a. m., The Breeding of Dairy Cattle, C. H. Eckles, Columbia, Mo.; 11 a. m., Increasing Production through Cow-Testing Associations, N. A. Negley; 2 to 4 p. m., Buttermaking in Creamery, A. C. Dahlberg, Regulating Moisture Content of Butter, Cheesemaking in Cheese Factory, J. L. Sammis, The Use and Tests of Pepsin, Ice Cream Making in Factory, The Use of the Emulser, D. F. Mattson; 7:30 p. m., Address, M. D. Munn, President National Dairy Council.

Friday, February 9th—8 a. m., Calculating Creamery Dividends and Cost of Manufacturing Butter, G. H. Benkendorf; 9 a. m., Methods of payment of Cheese Factory Milk, J. L. Sammis; 10 a. m., Disposal of Creamery and Cheese Factory Drainage by the septic tank and other methods, E. H. Farrington; 11 a. m., Butter Moisture Regulation at the Present Time, G. H. Benkendorf; 2 to 4 p. m., Buttermaking in Creamery, A. C. Dahlberg, Leaky Butter, Prevention of Mold and other losses in Packing, Cheesemaking in Cheese Factory, J. L. Sammis, Branding Cheese and Soft Cheese Making, Ice Cream Making in Factory, D. F. Mattson, Increasing solids in ice cream mix; 7:30 p. m., Address, W. M. Hays, formerly assistant secretary United State Department of Agriculture.

SHORT-HORNS The get of Rosebud Champion, winning 2d at the International; Highland Sultan, winning 3d; Buchan Marshall, he from winners on both sides at same show. Can show you ton cows and 2,400-lb. sires. If you want size and milk come or write W. J. Bernd, New Richmond, Wisconsin.

HART BROS., OSCEOLA, IOWA

IMPORTERS and breeders of **Percheron** and **Belgian stallions** and **mares.** We have the best lot of horses ever in our barns. Write or come and see us.

Dependable—That's the Word

Just describes Capewell horse nails. When you drive your horse—if shod with Capewell nails—you don't have to worry about losing shoes. These nails can be depended on to hold the shoes. They hold even under severe and unusual strains. Not the cheapest nail regardless of quality but best in the world at a fair price.

BIG POLANDS **E. W. HENDRICKS** **HAZEL GREEN, WISCONSIN** BIG POLANDS

HORSES.

PROPRIETORS OF THE WHITE CITY STOCK FARM.

WE have never offered to our trade a more superior lot of Percheron and Belgian stallions, in both imported and American bred stock, than we can now show. Our imported horses are young and thoroughly acclimated, many of them having made seasons in 1915 and 1916 and are tried and tested sires. Our American bred horses were selected from the best breeders in America and are out of noted sires and dams and are horses of great quality in every respect. We have especially selected ten black and dark gray 2 and 3 year old Percheron stallions weighing 10 tons. These are all outstanding horses and should be purchased by those who need a sire for full-blooded mares. Among them is Coco, 1st prize 2 year old and reserve champion at the Wis. State Fair. This colt is black in color and weighs a ton. To the early buyer we offer one of the greatest collections of ton stallions to be seen in any importing barn this winter. We have no old, worn out, picked over stallions on hand. Let us know your wants, or better still, come and spend a day or two. A hearty welcome awaits you. Send 25 cents in stamps for large horse hanger, which shows the picture of a number of stallions now on hand, our main farm and sales stable and our firm's picture. Will sell several of our choice Iowa farms on easy terms.

FRANK P. SHEKLETON & SONS **LAWLER, CHICKASAW CO., IOWA**

☞ We are 50 miles west of Prairie du Chien, Wis., on the Milwaukee R. R., making direct connections for Lawler.

HOLSTEIN-FRIESIAN CATTLE.

Purebred Registered
HOLSTEIN CATTLE

Fifteen thousand dollars in prize money, for milk and butterfat production, was distributed among breeders of registered Holstein-Friesian cattle during the year ending April 30, 1916. The official supervision, by the Advanced Registry Office of the Holstein-Friesian Association, of all regularly conducted tests, and the award of liberal prize money have proven a mighty stimulus and an educational factor of great value, in the promotion of interest and progress in the breeding of Holstein cattle.

Send for FREE Illustrated Descriptive Booklet.

WELL GROWN, WELL MARKED HOLSTEIN BULL

BORN December 1, 1915. Ready for immediate service. Sire, Crown Pontiac Korndyke, a richly bred son of Pontiac Butter Boy, that has 59 A. R. O. daughters, 4 above 30 pounds, and that is a half brother of Hengerveld De Kol and out of the same dam as Pontiac Clothilde De Kol. Dam, Stellaris Burke Pontiac 3d 255567, a big, roomy heifer with a fine large udder and good teats. She will be tested when she freshens again. Her dam is a 24.44-pound granddaughter of Hengerveld De Kol. Good type and high production have been bred into him in every line of his pedigree. Buy him now. He will soon be worth twice what we ask now. Send for pedigree. Address
NORTON FARMS RACINE, WISCONSIN

HOLSTEIN BULL FOR SALE

Ready For Service

BORN January 1, 1916, sired by a proven son of King Segis De Kol Korndyke, sire of the first 40-lb. heifer and brother to the sire of the $50,000 bull and the $35,000 bull. Records of his dam and two nearest dams of his sire average butter, 7 days, 29.44 pounds. He is a good individual, a trifle more black than white. Priced right for immediate sale. Address
PINEHURST DAIRY SHEBOYGAN FALLS, WISCONSIN

HEAD YOUR HERD WITH A WINNER

GET INDIVIDUALITY WITH BREEDING. Would you like to head your herd with a brother to the junior champion Holstein bull at the Minnesota State Fair, 1916, or the junior champion bull at the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of that blood that won for us the Premier Breedership at the Southwestern Dairy Show and the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of the blood that enabled us to win the Wisconsin Farm Management Contest, 1915? DO YOU want to breed individuality and production into your herd? If so, NOW is your chance. We offer some 20 choice young bulls from 1 to 15 months old bred in these lines. They are sired by our senior herd sire, Bairdland Segis Sir Prize, and out of daughters of Sir Urmagel Burke, a 31-lb. bull, with a 35-lb. sister. These daughters are making from 18 to 25 lbs. as 3 and 4 year olds. WHAT would one of these youngsters be worth to you? Write us your wants or come and see them. Herd tuberculin tested. Each animal guaranteed to be a breeder.

Holstein Calves For Sale
KING Segis Pontiac Beauty 112516, at head of herd, three years old, ten A. R. O. sisters. All bulls one year old sold. A few bull calves for sale, two heifers, one one-year-old, one three months, dark in color. Address Henry Walsh, Sheboygan, Falls, Wisconsin.

FOUR REG. HOLSTEIN BULLS FOR SALE

TWO of them old enough for service. Sired by the 29-lb. bull, Fairmont Pietje Ormsby, whose dam is a sister to the 41-lb. cow, Sadie Vale Concordia 4th. Fine individuals and price reasonable. **L. Lindauer, Kaukauna, Wis.**

30-POUND YEARLING HOLSTEIN BULL

READY for service for sale; also a yearling bull from a 23-pound dam. Younger bulls from dams with records up to 30 pounds. Prices from $85 up, depending on breeding and age. When you want a herd header write
W. H. S. Rhoda Watertown, Wis.

HOLSTEIN CALVES

WE offer for sale choice, beautifully marked, 15-16 pure-bred heifer or male calves 1 to 2 weeks old, out of heavy-milking dams, $15 each, crated f. o. b. cars. First check takes them. Write
W. C. Kenyon & Sons Elgin, Illinois

A 31.02 POUND BULL FOR SALE

RACINE JOHANNA PIEBE MERCEDES 188460. Born December 8, 1915. Well marked, of excellent conformation and well grown. His dam, **Ella Mercedes of Elm Court,** made **31.02 pounds butter** in seven days; **130.47** in thirty days and **829.78** in a year. She is a big cow weighing over 1,600 pounds; her dam weighs over 1,700. His sire, **Racine Sir Johanna Piebe,** is a show bull. His dam is a show cow and weighs close to 1,600 pounds. In seven days she made 24.49 and 808.82 pounds butter in a year. Send for his complete pedigree and picture. **Large size, good, straight type** and **heavy production ability** have been bred into this bull for generations. Come to our farm and see his dam, grandam and sisters. They are the type you will want in your calves. Am also offering a straight, well-grown heifer, born May 15, 1916, out of Lady Johanna of Elm Court, a half sister to Colantha Piebe of Elm Court; calf is sired by Count of the Pontiacs.
Reuben Klofanda R. 1, Racine, Wis.

Guaranteed Holstein Bulls

FROM 1 to 11 months of age, out of large record A. R. O. cows. They are sired by the great bulls, King Artis Pontiac and King Korndyke Veeman, that have records in their pedigree from 30 to 41 lbs. butter in 7 days. They are priced to sell.
Wisconsin Star Stock Farms Ed M. Schultz, Hartford, Wis.

TWO SONS OF THE 27.56-POUND BULL
Sir Johanna De Colantha De Kol

THESE bulls are good individuals, well marked, more white than black, well grown. They are both from A. R. O. daughters of the bull, Oakburst Milk and Butter King. Price reasonable. Send for extended pedigrees. Address
B. F. Winckler & Sons Medina, Wis.

WALCOWIS FARMS

OFFER grandson of King of the Pontiacs, born March 10, 1916, nicely marked, well grown, a good individual and tuberculin tested. His sire Cornucopia Pontiac Johanna Lad, a full brother to world's yearly record senior 2 year old, and the sire of most of our state fair winners. His dam is a 16-lb. 2-year-old daughter of a 33-lb. bull. Seven nearest dams average 22.89 butter. Write now for reasonable price, pedigree and photo to
N. Dickinson & Son Lake Geneva, Wis.

HIGH grade Holstein heifer calves, well marked, sired by registered bulls and out of heavy producing cows, $16.00 crated. Registered bull calves, $40. Paul McFarland, Watertown, Wis.

Buy Your Home Wholesale

GUARANTEED PRICES NO EXTRAS

OUR **wholesale, "direct-to-you" prices** include **everything**—lumber, millwork, hardware, paints, shingles, glass, nails, etc., with **complete working blue-prints** and specifications. **We save you $200 to $500 on your home.** All qualities **standardized** by **official gradings**—shipped **anywhere** and costs **absolutely guaranteed** no matter **where** you live. Material supplied **Ready-cut** reducing construction costs and labor problems. Or **not** Ready-cut—as **you** prefer. We **alone** price houses **both** ways.

Remember, you run no risk. Everything must be right **to your own satisfaction.** You are the sole judge. Money back on request if everything is not right. That's the **Gordon-Van Tine way** of doing business. That is what won us 100,000 delighted customers, all of whom buy by mail. Customers in every State. **Many near you.** We will refer you to them if you ask.

Barns

Barns are 95% lumber. As America's largest Lumber house, we give lowest prices. We supply all the material for complete barns from $200 up. Send today for our big, new Barn Plan Book, just published January 1, showing this barn pictured above in 26 different sizes. Also shows many other plans of Barns and Farm Buildings of all kinds. **Sent Free.**

Write For Our FREE Plan Book

Our new book, "Gordon-Van Tine Homes," shows plans, photos, color ideas, Guaranteed Wholesale Prices. Over 200 homes shown. Model Farm Houses with **big kitchens, entry-wash-rooms,** etc., shown in plans Nos. 311, 312, 306, 171, 181, 169, 168. See these. Plans **proven;** built in **every** State—some near you. **Local references** given. Remember, this valuable book is FREE to home-builders. Send for it **today. Use the coupon.**

Vouched for by 3 Strong Banks and 100,000 Satisfied Customers.

Shingles

Washington Red Cedar. Made under official grading rules, Extra clears, 5 to 2, per 1000, $3.60. Extra Star A Star, 6 to 2, per 1000 **$3.10**

Screens

Made of Soft White Pine. Best wire screen cloth. No shoddy screens. All sizes. Door screens, $1.90 up. Window screens as low as - - **62c**

Hardware

Quality the highest, backed by our ironclad guarantee. Everything you need at wholesale. Front door locks as low as - - **$1.90**

Windows

Plain and fancy in all Standard sizes. Plain rail, glazed 90c up. Transoms, 45c each. 8 x 10 window glass 5½c per light. Safe guaranteed. Check rail windows as low as - - **75c**

Doors

Immediate shipment. Glazed or unglazed. Oak, White and Yellow Pine, Fir, Cypress, Oak Veneer, Solid Yellow Pine, Interior and Front Doors. Prices run as low as - **$1.49**

Roofing

Jap-a-Top Slate Surfaced Shingles. In Red or Green. Permanent and beautiful—Also roll roofings with straight ($2.25) or diamond point edge ($3.00). Jap-a-Top Shingles. per square - - **$5.00**

Highest Grade Lumber At Lowest Prices SHIPPED ANYWHERE

Lumber is the backbone of all buildings. **Your building costs are in proportion to the lumber prices you pay.** Buy direct! Pocket the 25% to 50% savings you make through our "wholesale to consumer" prices. It is impossible to equal our quality at the prices without lowering standards. We ship anywhere that railroads go. Get your shipments from **the biggest lumber stock in America. All graded in accordance with the rules of the Lumbermen's Association.** All standard, bright, clean, new. Kept protected from the weather. Write today for our **big Wholesale Lumber Price List Free!** Combines price list and order blank. Contains full descriptions, weights, freight rates, shipping instructions, etc. Quick shipments. **Send coupon for Free Catalog.**

Sample wholesale prices at which we are selling STANDARD LUMBER to the home builders of America

2 x 4—14 and 16 ft. No. 1 Yellow Pine	$25.50 per M. Ft.
2 x 8—14 and 16 ft. No. 1 Yellow Pine	$25.00 per M. Ft.
1 x 8—No. 2 Yellow Pine Shiplap	$24.50 per M. Ft.

THE WISCONSIN FARMER

VOL. XLVI. NO. 5. THURSDAY, FEBRUARY 1, 1917. WHOLE NO. 1827

Poultry For Profit—Not For Fun.

HENRY FIGGE, of Milwaukee county, is not exclusively a poultryman. His main interests are tied up in a wholesale house in Milwaukee, but he manages nevertheless to sell a few hundred thousand eggs every year as a side line, and our readers may well profit by his experiences. Producing eggs by the hundred thousand necessitates an establishment of considerable size, the proper kind of chickens and a long head to run the business. Mr. Figge is fortunate in having all these points in his favor. His farm, called the Greenwood Poultry and Egg Farm, consists of forty acres of fertile land a few miles out of Milwaukee. As the proper kind of chickens, Mr. Figge has the Single Comb White Leghorns. Open-air houses and colony houses, some thirty odd, dot the place. The colony houses are used in summer for the young chicks. They are moved from place to place on the twelve acres of natural timber, which is part of the farm. There are 1,500 layers on the job at Greenwood all the time. They are kept in flocks of 500 to 600 in the open-air houses. Constant selection and careful study of individuals has brought the flock to a standard of perfection that is hard to beat. One flock of 600, which was closely watched for a whole year, averaged 167 eggs per bird. From this flock 400 birds have been mated to the best of the Greenwood cockerels, all backed by records well above the 200 mark. This method of careful mating and mating with knowledge of the records behind the birds is the secret of Mr. Figge's success. Sanitation and ability to handle the business are important, but the stock itself must be there to start with.

Only the eggs from two-year-old hens are used for hatching, as a rule. The pullets in Mr. Figge's estimation do not give their eggs the necessary size and vigor which insures a healthy and growing chick. Considerable success with eggs from a few three-year-old hens has induced Mr. Figge to try a larger number of settings this year. Previous losses with such eggs were as low as 1 per cent, and less.

While show points are not neglected, the main object of all breeding operations is to increase egg production. In what he calls the Greenwood strain, Mr. Figge thinks he has a strain of Leghorns which have all the qualities of this famous breed intensified to a marked degree.

The best of each flock are mated about this time of the year—January. In February a battery of incubators with a capacity of 2,500 eggs are started to work. A brooder house, equipped with a standard hot-water brooding system, brings the chicks to proper growth. From here they are transferred to the colony houses.

A certain number of eggs and day-old chicks are offered for sale each year, about March, and Mr. Figge's policy of giving satisfaction has brought business his way. The surplus stock of cockerels is disposed of to breeders. Culls do not find their way into breeders' hands in this manner, but are sold as such on the market.

Mr. Figge contracts all his eggs at a fancy price, and the attractiveness of the product plays no small part here. Leghorn eggs, naturally large in size and a pure white, bring a premium over brown shelled eggs in this case. Last year the contract stipulated that this season's eggs must be contracted for three months in advance. A little over four months before the time set, a satisfactory price was offered for this year's production. And the 1,600 Leghorns at Greenwood are doing their best.

The feature that strikes one as especially outstanding is the absolute cleanliness at Greenwood. Everything is ship-shape all the time. As soon as a bucket has been used, it is put away. The incubators not in use at present had scarcely a coat of dust. All farm machinery was stored inside. The henhouses, though there had been damp weather for a week, had a fresh smell about them seldom met with. The brooder house, also not in use, was as clean as the front parlor. "We have not had a mite on the place for years," said Mr. Figge. "We can't afford to. The roosts in the houses are cleaned every other day and the boards and floors sprinkled with a light coating of slaked lime. The straw is changed regularly; during damp weather more frequently than at other times. I can't remember having even a sick chicken."

Most of the feed for the flocks is raised on the farm. Corn, oats, wheat, barley and alfalfa are the main crops. The barn contains a power-room, where the feed is ground and chopped for the chickens. A 175-foot well, worked by an engine, supplies the entire place with running water. Mr. Figge is very careful in his methods of feeding.

He says feeding is an important factor in raising chickens and he takes great care to supply his flocks with all they need, but no more. Each night the water is taken out of the feeding tanks in the houses and the tank rinsed out and left empty till morning. The first thing in the morning fresh water is supplied, and then the hens are given a light breakfast of cracked corn and barley. They have to scratch for this in the scratching pen, as the exercise keeps them healthy and working. At noon a milk mash is fed; also light. In the evening the biggest feed of the day is given and the hens are sent then to bed with a full crop, which is, according to Mr. Figge's notion, the only way. Feeding them too heavy during the day makes them lazy, and that means a falling off in laying. The eggs are shipped every day, so that there is not an egg in the house for more than twenty-four hours.

Mr. Figge has in Greenwood an excellent location and has built up a paying egg farm in the short time of five years. Careful methods, however, will do more towards success than big investments. While the average farmer would not go into the poultry business so extensively, he may well profit by the experience which this big egg producer has had.

There is an increasing demand for eggs for consumption, and while eggs have been selling at big prices, it has been demonstrated that some hens with poor treatment will not even earn their board. But the farmer who will pick a good laying strain, and pay sufficient attention to the sanitary conditions around his poultry yard and houses, and in addition give thought to the matter of feeding for egg production, may well expect to reap rich rewards, especially during the season when eggs sell at such high prices. Good eggs, marketed daily, will bring 30 to 50 cents a dozen in the months of January and February, and at that rate they will pay big, provided the hens will lay in sufficient quantities. In Wisconsin farmers are close to market and they can in many cases market their own eggs direct, and this usually means added profits. Now that the egg market is a cash market, it certainly is worth while for us to look into the matter of higher egg production.

1—A crop of healthy Greenwood Leghorns which will be used for breeding purposes this year. 2—Henry Figge, West Allis, Wis., who is intensely interested in egg production. 3—The brooder house at Greenwood Poultry Farm, near West Allis, Wis., will accommodate about 2,500 chicks.

NEW DE LAVAL

A Bigger and Better Cream Separator for the Same Money

THE FARMER who buys a [illegible] year will get [illegible] and better value for [illegible] money than ever before.

Not only will he get a better machine, a simpler machine, a machine that will skim even closer than any previous De Laval, but he will get a machine of larger capacity.

And the price has not been increased one cent.

Just think what that means to cow owners in the face of rising prices on almost everything else the farmer has to buy, including other cream separators.

Only the tremendous volume of De Laval sales makes it possible to give the farmer more for his money when others are giving less.

The NEW De Laval is the culmination of nearly forty years of experience and development by the largest and oldest cream separator concern in the world. It represents

The greatest improvement in separator construction in the last thirty years

If you are trying to get along without a cream separator, or with a half-worn-out or unreliable machine, why not get a NEW De Laval NOW and stop your cream waste? You don't need to count the cost, because the De Laval will soon pay for itself.

There is a De Laval agent near you who will be glad to explain all the improvements and advantages of the NEW De Laval, and who will set and start a machine for you on your farm and let you try it for yourself.

If you haven't the spare cash right now, that need not stand in the way of your having the use of a NEW De Laval the rest of the winter. We have an arrangement with De Laval agents which makes it possible for any reputable farmer to secure a De Laval on the partial payment plan—a small payment at the time of purchase and the balance in several installments—so that your De Laval will actually pay for itself while you are using it and getting the benefit from it.

Why not see the nearest De Laval agent at once? If you do not know him, write to the nearest office for any desired information.

Every NEW DE LAVAL is now equipped with a Bell Speed-Indicator

The "Warning Signal" which insures proper speed and uniform cream

Because nine people out of ten turn the separator handle too slowly and because this always means loss of cream and cream of uneven thickness, every cream separator should be equipped with a reliable speed indicator.

Every NEW De Laval is now so equipped. The De Laval Bell Speed-Indicator is simple. It is accurate. It is reliable. There is nothing to wear out or get out of order. No matter who runs your De Laval, the "warning signal" will tell you when the speed is not right. You hear it and do not need to see it.

THE NEW SELF-CENTERING DE LAVAL BOWL

Some of the points of superiority of the NEW DE LAVAL

The New De Laval bowl design and the new method of delivering the milk into the discs give increased capacity without increasing the weight or size of the bowl or increasing its speed. The incoming whole milk is delivered beyond the cream wall, and this, in conjunction with the improved design of the bowl, makes possible closer skimming than ever before, especially under the more difficult conditions of separation, such as skimming a very heavy cream or separating milk below usual temperature.

The much lower speed of the De Laval than other cream separators (in most cases from one-half to one-third less) insures minimum wear of gears and much longer life of the machine.

The New De Laval concave-bottom, self-centering bowl is so designed and so supported by the detached spindle that it will run true and do perfect work even after long wear, the great importance of which every separator user will appreciate.

There are fewer discs in the New De Laval bowl, and all discs are unnumbered and are interchangeable.

By reason of its simpler construction and the fewer number of discs, the New De Laval bowl is more easily washed and cleansed.

All New De Lavals are automatically oiled, every moving part of the machine being bathed in a constant film of oil. There are no oil holes anywhere on the machine, and the sight feed oil cup on the top of the frame provides for a constant supply of fresh oil.

The gears, pinions and other moving parts of the De Laval are exceedingly simple in arrangement, substantial in dimensions and always interchangeable.

The De Laval tinware is sturdy and heavily tinned, well suited for long and hard wear, and easy to clean.

The low speed of the De Laval bowl, in combination with greater capacity for a given size and weight of bowl than is found in other separators and the automatic De Laval oiling system, make the De Laval the easiest cream separator to turn.

New Catalog will be mailed upon request

FAMILY CIRCLE TALKS
BY THE PUBLISHER

THE HIGH PRICE OF FARMING IN WISCONSIN.

NOTHING is more offensive to me than to hear some city man remark, with an air of knowing it all: "The farmers are responsible for the high price of living; they're the ones to blame." Nothing could be further from the truth. Notwithstanding the fact that the farmers of Wisconsin are enjoying the greatest prosperity they have ever known, the existing high prices for our farm products do not necessarily mean greater farm profits all along the line.

According to the December Crop Report, issued by the United States Department of Agriculture, the farmers of Wisconsin are receiving considerable above the average for the nation for their farm products. Thus, we find the price for Wisconsin corn given at 24 cents above the price at the corresponding time last year; Wisconsin oats, 15 cents a bushel higher; Wisconsin wheat, 65 cents higher; Wisconsin hay, $1.70 a ton more; Wisconsin potatoes, $1.02 a bushel more. In the large quantities in which these crops are raised in our state, these increases mean an immense sum in the aggregate. But it is wrong to hold the idea that the farmers of Wisconsin are to blame for the high prices which the consumer has to pay. The farmer, in due turn, is obliged to pay much more than he paid a few years ago for what he buys, even more than he paid last year.

I called attention, in these columns, a few weeks ago to the fact that the Wisconsin farmer, who is obliged to buy a new set of harness this spring, will have to pay from $15 to $35 more than he would have paid last fall. Nor is the harness manufacturer altogether to blame, for the same grade of leather for which he paid 38 cents a pound, two years ago, is now costing him 72 cents a pound. Here is a considerable increase which the farmer must shoulder in the increased price charged for harness, boots, shoes and other leather products.

But this is not all. The farmers of Wisconsin spend on an average about $3,000,000 a year for new machinery, which does not include the amount spent for new automobiles. I am advised by the leading agricultural implement men of Milwaukee and Madison that farm machinery (particularly tilling and harvesting machinery) will cost from 10 to 25 per cent more this year than last, on account of the condition of the steel market. Here is another burden for the farmers of Wisconsin to shoulder and to be considered when they are charged with taking unfair advantage of the poor consumer.

Nor is this all. The farmers of Wisconsin are obliged to pay more for practically everything they buy nowadays, and the advance is continuing steadily. A few days ago the Western Retail Implement, Vehicle and Hardware Association held its annual convention. One of the important subjects up for discussion was the attitude of the sisal trust, which controls the binding twine market and prices. It was estimated that the grain farmers of America will be compelled to pay from $12,000,000 to $15,000,000 more this year than last for their binding twine. This is an important item here in Wisconsin, where grain is such a big factor in our annual field-crop production. It gives point most emphatically to the plea of these implement men that the farmers sign petitions and send them to congress, praying for relief from the exorbitant prices imposed upon them by the sisal trust. In order that my readers may understand the situation thoroughly, I am going to print a portion of the resolutions adopted by the implement men, as follows:

On behalf of the users of binder twine, we urge the department of justice and the department of state to act immediately in accordance with the recommendations of the senate committee. We deprecate the fact that under existing conditions our farmers must continue to submit to the extortion of the sisal trust, so far as their twine requirements for 1917 are concerned, and we demand that the necessary steps be taken by those in authority to prevent the continuance of the hold up. We deplore the failure of the government to proceed against the monopoly when it first began to advance prices without warrant, for we believe that prompt action would have prevented the enormous advances that have been made during the past few months applicable to fiber purchased for 1917 twine requirements, and which advances will force the farmers of the United States to pay from $12,000,000 to $15,000,000 more for their twine this year than they paid last year; and we demand of the authorities such action as will reduce the price to a normal basis for 1918 and subsequent years.

We heartily approve the efforts being made by the United States Department of Agriculture to develop fiber growing in our own possessions and the efforts of twine manufacturers to obtain a fiber which will release our farmers from the grip of the Yucatan sisal trust, and we pledge them our support in these efforts

Wisconsin being one of the leading small-grain states, this is an important matter here. It should be investigated and relief secured, if at all possible. I urge upon all readers of The Wisconsin Farmer that they talk this matter over with their local implement dealers and sign the petitions which are presented to them, if they find the situation to be as I have pointed out here. The farmers of Wisconsin, who are making their acres yield so abundantly, by the hardest and most efficient labor, should reap every possible reward and not be held up by any agency or person. But to hold Wisconsin farmers responsible for the high price of living, and argue that they, in turn, pay no toll to the Robin Hoods of commerce today, is altogether wrong. The high price of living is affecting the producer just as well as the consumer.

AGRICULTURAL CONTEST IN WISCONSIN.

THE spirit of friendly rivalry is a splendid incentive to improvement in every line of human endeavor, but in nothing more than in farming in Wisconsin. Agricultural exhibits and contests of all kinds, in which the competition to excel is keen but clean, stimulate the raising of better crops and better stock, the production of better dairy products and better farm management of every kind.

I doubt if there is a state in the Union which has profited more by the ambition to lead one's neighbors, which has grown up as a result of these contests, than has Wisconsin. Reports come to me of hog-fattening contests in Winnebago county, where, among 120 entries, the world's record for increase in weight during thirty days was surpassed; of 800 farmers all over the state working feverishly to complete all the necessary reports and records for the farm-management contests; of the local trials in stock judging, now being held among school boys in twenty-five sections of the state for places on the three-man teams, which will meet in the live stock judging tournament, to be held during Farmers' Week at the State Agricultural College, in February, and of dozens of similar events being held all over Wisconsin.

The best feature about such contests is that everybody wins and nobody loses. I do not know which one profits the most, the man who carries off the blue ribbon or the man who is at the bottom of the list. The former knows the joys of victory and the reward for the efforts which he has put forth, but the fact that he was able to excel may mean that he did not need the stimulus which the desire for achieving the prize the next time gives to the latter. Then there is the mental and moral discipline, which such events develop and in which the good winner and the good loser are both worthy of honor.

There are just two things which must be kept in mind in such competitive efforts. The first is that only fair means shall be used toward securing the coveted prize, and the second is that it shall all be treated in a friendly, generous spirit. When the victor can look all the other contestants in the eye and accept their congratulations, with the knowledge that they are deserved through merit alone, and when the losers can congratulate the winners with the sincere acknowledgment that the award was well deserved, then the keener the competition the better for all concerned.

I hope that these agricultural contests may grow in number and in quality throughout the Badger state, and especially that the young boys and girls may feel the impulses to farm betterment and obtain the added strength of character and the feeling of increased power that comes "when you can meet with triumph or disaster and treat those twin imposters just the same."

ORGANIZING TO IMPROVE WISCONSIN LIVE STOCK.

I AM tremendously inteested in the splendid work which is being done in Wisconsin in organizing the supporters of the various breeds of live stock. It has been my privilege in the past twenty-five years to be intimately connected with the advancement of the live stock industry. From personal interviews with a large number of successful farmers in Wisconsin and other surrounding states, I have been convinced that in a majority of cases it is safe to say that the most successful farmer is the one who devotes at least a portion of his energies to the development of live stock upon his farm. I am well aware that here in Wisconsin many of our breeders specialize in grains, potatoes, fruits or garden crops, but I do not think that any of our people can afford to neglect the live stock end of farming operations.

In the early days of live stock breeding in this country it was a case of every man for himself. I think that Wisconsin has made more progress in the line of organization and co-operation in the live stock industry than any other state. I have before me a little pamphlet which I have just received from Mr. Math. Michels, of Peebles. Mr. Michels is president of the Fond du Lac County Guernsey Breeders' Association. I am certainly pleased to note the large number of representative farmers of Fond du Lac county who are members of this association and who are co-operating to advance the interests of this good breed of dairy cattle in their neighborhood. Of course, I take this only as an illustration. The Holstein breeders of the same county have also organized, and they are doing their best to advance the interests of another splendid breed of dairy cow. Within the past two weeks representatives of The Wisconsin Farmer write me that they have had an opportunity to attend Holstein and Guernsey Breeders' Associations in Waukesha county. I have before me a statement of the business transacted by the Waukesha County Guernsey Breeders' Association within the past year, and I note that it totals almost $50,000. Just a few days ago the Short-horn breeders met in Janesville and decided to push the interests of the dual-purpose or milking strain of Short-horns. I have heard a great deal about the activity of the hog men in various counties in southern Wisconsin, and I know that the breeders are accomplishing a great deal by these co-operative efforts.

I should like to have every one of my readers understand that I am heartily in sympathy with the work which is being done by all of the breed organizations of the state. I do not know of any state where this organization work is carried on more systematically than in Wisconsin. In this connection I want to call the attention of my readers to the following announcement of special breed meetings which will be held in Madison during Farmers' Week.

February 5th, 3:30 p. m.—Wisconsin Sheep Breeders' Association, Wisconsin Aberdeen Angus Breeders' Association, Wisconsin Hereford Breeders' Association, Wisconsin Short-horn Breeders' Association, Wisconsin Red Polled Cattle Club.

February 6th, 4 p. m.—Wisconsin Berkshire Breeders' Association, Wisconsin Chester White Breeders' Association, Wisconsin Duroc Jersey Breeders' Association, Wisconsin Hampshire Breeders' Association, Wisconsin Poland China Breeders' Association.

February 7th, 11:30 a. m.—Wisconsin Horse Breeders' Association.

February 8th, 3 p. m.—Wisconsin Ayrshire Breeders' Association, Wisconsin Brown Swiss Breeders' Association, Western Guernsey Breeders' Association, Wisconsin Holstein Breeders' Association, Wisconsin Jersey Breeders' Association.

I strongly recommend to the breeders of Wisconsin that they identify themselves with some branch of the live stock association work represented in the above program. It may be that not every one of these organizations has accomplished everything that it should have accomplished, but shall we not say that this is more the fault of those who stay out than those who are on the inside? The men who are intimately connected with the work of these organizations are striving determinedly to better the standard of live stock in this state. Their ambition is to help Wisconsin to get rid of the poor animals and supplant them with more profitable stock. This is a worthy ambition, and I should like to see every one of my readers support such efforts with all his might.

WISCONSIN SINGING "AMERICA."

IT PLEASES me greatly that so many readers of The Wisconsin Farmer have written to me, asking for the copies of "America," which I offered to send to all who desired them. Do not hesitate to ask for them; they are at your disposal. I should be glad, indeed, if the inspiring words of "My Country, 'Tis of Thee" were to ring out from every corner and quarter of our beloved state. After all, has any state done more than Wisconsin to make America great, and to take the advanced position it now occupies? I say "No!" Should we not be duly grateful for the privilege which has been ours and thank the Giver of all good things, "our fathers' God," for the pleasures and opportunities which are ours in such abundant measure? Write to me for printed slips containing all the stanzas of "America." They will be sent to you free of charge.

The Wisconsin Farmer Madison, Wis.

Magnitude of the Poultry Industry.

There were nearly 300,000,000 birds in the poultry yards of the United States when the last census was taken. Of this tremendous total, 95 per cent was made up of chickens, a little over 1 per cent turkeys, approximately 1 per cent ducks and 1½ per cent geese. Then, of course, there were pigeons, guinea fowls, etc. The census revealed the fact that poultry was raised on eighty-eight out of every hundred farms, so that it may be taken for granted that the great majority of farm incomes are enhanced more or less by the diligence of old biddy. Her cackles are not in vain, as the department of agriculture estimates that the annual revenue from farm poultry flocks amounts to three-fourths of a billion dollars. You would have to add together the value of the gold, the silver, the coal and the iron mined in one year to approximate this grand total. The average income from farms upon which poultry is raised and reported in the census was $104.98 per farm. This does not include the value of the poultry products consumed in the home, which would be twice this amount. This conclusion may be arrived at when it is considered that the census reports the total annual income from the sale of eggs and carcasses to be only $256,000,000, whereas investigation by the department of agriculture into the total value of the eggs and carcasses sold as well as those consumed revealed the fact that these products are worth $750,000,000.

Those of our readers who are engaged in some phase of poultry production belong to one of three classes; they are either breeders, fanciers or producers. The breeder is defined by Lippincott as "one who seeks to raise the food manufacturing efficiency of a standard breed or variety." In some instances this may have to do with increasing the egg-laying ability of certain strains so that cockerels from the breeders' flocks when mated with grade flocks tend to increase production with a corresponding increase in the profits. This class of poultry producers is doing a most important work and unquestionably one result of their skill shows up in a greater margin of profit from those flocks where improved cockerels are used.

It may not be easy to distinguish at all times between the breeder and the fancier, though the latter is one who carries the work of a breeder to its final issue. Out of his work has grown the show system whereby one flock is pitted against another for premiums. Strong emphasis is placed on beauty points and utility ends are not always attained by the types that dominate the show ring. It may be said that the fancier leads the way for the breeder and the work of the fancier finally reaches the producer through the hands of the breeder.

To the third class belong the producers and here we find anywhere from 90 to 98 per cent of the poultry raisers of the country. They are engaged in this line of production only in a secondary way, their main efforts being devoted to crop growing and the raising of farm animals. On these farms the revenue derived from the poultry yards is largely net profit because to a considerable extent waste products are used for feed during most of the year. Only in one respect may it be said that special skill is used in handling these flocks and this is shown in the tendency to work improvement by using breeding stock from the flocks of the breeder and the fancier. Here we have the great outlet for surplus pure-bred stock, which creates a stable market for those who use skill in breeding operations and who adopt sensible means of bringing their record as breeders to the attention of producers to a sufficient extent so that their surplus stock is disposed of.

Poultry production is on the in- [illegible] this being partly due to the [illegible] on that has resulted from in- [illegible] prices and partly to the improvement brought about in the farm flocks by the use of better blood. It is scarcely necessary to say that the future looks bright. All meat products are high because they are scarce, and, as poultry products can be increased much more quickly than any other class of meat it follows that poultry breeders should be able to reap a large harvest during the next few years or until the supply of meats more nearly catches up with the demand. Considerable attention is given in this issue of The Wisconsin Farmer to the discussion of poultry problems. Experts have been called upon to give instruction on various branches and this is designed to meet the needs primarily of the producer, though the exchange of views will unquestionably be beneficial to those who may be classed as "breeders," or, in other words, to producers of pure-bred stock.

The Egg Case Now Has the Center of the Stage.

Wisconsin Ayrshire Interests.

The Wisconsin Farmer is in receipt of a good letter from Frank T. Stare, of Ladysmith, secretary of the Wisconsin Ayrshire Breeders' Association, in which Mr. Stare reviews to some extent the activities of the supporters of this breed of dairy cattle in this state the past year. Mr. Stare writes as follows:

Probably the one thing that has done most to bring the breed to the attention of the public during the last year is the magnificent exhibit made at the state fairs and dairy shows during the past year. Three Wisconsin herds and one Iowa herd made the complete western circuit. In addition local herds, sometimes as many as half a dozen, were exhibited. At some of the fairs there were more Ayrshire cattle exhibited than any other dairy breed. The exhibits were uniformly good and attracted a good deal of attention.

Much interest was manifested at the Southwestern Dairy Show at Kansas City and the Missouri State Fair. There were probably more Ayrshire cattle sold at these two shows than all of the other dairy breeds combined. Great interest was also manifest in the Northwest, particularly at the two North Dakota shows at Fargo and Grand Forks. Exhibitors report very satisfactory sales at both of these shows.

The breed in general has made more progress during the last few years than any other dairy breed. One record after another has been smashed. The 25,000-pound mark has been passed in the mature form and new world's records have been made in two and three-year-old forms. While no world's records have been claimed by a Wisconsin cow during the last year, Wisconsin breeders are showing increased interest in advanced registry work, and if reports are true, Wisconsin will soon be heard from along these lines.

Farmers and dairymen are beginning to realize that the Ayrshire cow is preeminently adapted to the climatic conditions of Wisconsin and the Northwest. She is a rugged individual which by environment and breeding is fitted to withstand the extreme temperature of the Northwest. This perhaps as much as any one thing, is the cause for her greatly increased popularity throughout this section of the country.

Mr. Stare has been a very faithful supporter of the Ayrshire breed and he has been ably supported by such men as Dr. David Roberts, of Waukesha; A. J. McNab, of Black River Falls; A. G. Austin, of Janesville; Adam Seitz, of Waukesha; James Van Etta, of Lima Center; Fred Tschudy, of Monroe, and others who might be mentioned. Included in the list of Ayrshire breeders of the state are men who have been very successful in the show ring. It is quite generally conceded that Mr. Seitz is one of the best dairymen in the country when it comes to handling show cattle. We are glad to see this good breed of dairy cattle taking its place in the live stock industry of the state.

Some Results of the "Snug" Winter.

This has been a "snug" winter in Wisconsin and our subscription department has felt the effect of it. The Wisconsin farmer likes to get indoors when the weather is away down below zero and the snow heavy on the ground. It is at such a time that he most enjoys looking over his farm paper. It is because of these facts that the subscription department of The Wisconsin Farmer has been literally swamped the past few weeks, that we know The Wisconsin Farmer is growing in popularity in this state. Never in the history of this publication has there been such an avalanche of subscriptions coming in direct from the farmers, a big majority of whom are old subscribers, and have been looking it over carefully these cold winter evenings and deciding, with the approval of other members of their family, that they want the paper to continue.

If any reader has been disturbed by the failure of the subscription department to get the label on his paper changed at once we trust that the tardiness on our part will be overlooked. It has become custom on the part of our readers to renew every winter, and the cold months are the ones when we get the most renewals on our subscription lists. If all these renewals were distributed evenly through the year it would be no trouble for our large force of clerks to handle everything promptly. But coming as they do, a large per cent within two or three months, and in so much larger numbers this year than ever before, it has been found impossible to get enough experienced help on short notice to give the subscription orders the attention which they should have. This is written so that subscribers, new or old, who have had any delays or trouble about getting their papers, will understand that we are working our very best to get all the subscriptions properly entered and the papers started. No one will get any less number of issues than we have contracted to send.

The publisher of The Wisconsin Farmer appreciates the hearty response of our readers to our suggestion that they renew early, and if we had realized that so many would answer this suggestion and in such a substantial way, we might have been better prepared to handle the vast volume of business.

We still have room on the subscription lists for Wisconsin farmers who are interested in a weekly agricultural paper, which strives to aid the farmer in every possible way. Special features on farm and home life, on dairying, the culture of fruits and gardens, beef and hog raising, sheep raising and many other subjects are planned for the coming year, and we are confident that those who join The Wisconsin Farmer family will feel that the money they send us for the paper is well spent.

Expect Big Week at Madison.

This is the last issue in which The Wisconsin Farmer will have an opportunity to call attention to the Swine Week program at the college of agriculture, Madison, February 5th-10th. Every department of agricultural activity in Wisconsin is to be represented at this series of conferences and the station workers have drawn upon many states for help in presenting problems which the everyday farmer has to meet. While the humble hog is to be exalted and given a position of greatest prominence, this does not mean that the other conferences which have proved so helpful in the past will be in any sense minimized. It is called "Swine Week," but there will be more than the usual number of meetings covering everything which will be of interest to the farmers of our state.

The Wisconsin Farmer believes that it pays to attend these meetings. This paper will be represented by members of its staff and reports of some of the more important conferences and utterances will be given, but it will not

It's Up to You

When Your Animals Get "Off Feed" and Do Not Thrive

I'll Save Your Veterinary Bills

When you have a sick or injured animal, write me, telling symptoms. Enclose two-cent stamp for reply and I will send you prescription and letter of advice free of charge.

Dr. Hess Stock Tonic

Gets Rid of Worms Makes Stock Healthy

We are now in the dead of winter. Animals are closely stabled and on dry feed. You are crowding them. You want them to eat well and turn their feed to good account. Remember, your animals are not out on pasture. It is up to you to supply the laxatives and tonics and blood purifiers. Dr. Hess Stock Tonic will

Condition Your Animals

It cleans out the worms and improves the appetite. They will then eat their feed with a relish because worms will not be distressing them. They will be free to digest, assimilate and get the good out of their feed. Dr. Hess Stock Tonic is not a secret preparation. Here are some of the ingredients and what they do—the same for animals as for the human family. Ask any doctor, consult any medical work:

Nux Vomica, nerve tonic, aids digestion.
Quassia, tonic and worm expeller.
Sulphate of Iron, blood builder, worm expeller.
Charcoal, prevents unhealthy fermentation.
Sulphate of Soda, a laxative and liver tonic.
Epsom Salts, a laxative.
Nitrate of Potash, acts on the kidneys.
Foenugreek, a flavor.

You will be well repaid for this special care of your live stock. Horses will be in condition for spring work, cows for heavy milking, sheep will fatten up, hogs will be free from worms and make larger growth.

Why Pay the Peddler Twice My Price?

My Stock Tonic is never peddled. It is sold only by reputable dealers—28,000 dealers in the United States and Canada. You buy it from the dealer in your town, a man with whom you trade every week, at rock-bottom prices.

25-lb. pail, $2.00; 100-lb. drum, $6.50

Smaller packages as low as 50c (except in Canada and the far West and the South).

So sure am I that Dr. Hess Stock Tonic will put your animals in a thriving condition, make the ailing ones healthy and expel the worms, that I have authorized my dealer in your town to supply you with enough for your stock, and if it does not do as I claim, return the empty packages and my dealer will refund your money.

Dr. Hess Poultry Pan-a-ce-a

This is just the time you should be giving your poultry this splendid tonic. It will put them in fine condition, make your hens lay, insure fertile hatching eggs and strong, vigorous chicks. Very economical—a penny's worth is enough for 30 fowl per day. Sold only by reliable dealers—1½ lbs. 25c; 5 lbs. 60c; 12 lbs. $1.25; 25-lb. pail, $2.50 (except in Canada and the far West). Guaranteed.

Dr. Hess Instant Louse Killer

Kills lice on poultry and farm stock. Provide your hens with a dust bath, to which add Dr. Hess Instant Louse Killer occasionally. The hens will do the rest. For lice on stock, with one hand rub against the hair and with the other sift the Louse Killer. Rub thoroughly into the skin. 1 lb. 25c; 3 lbs. 60c (except in Canada).

96-page Veterinary Book free for the asking

DR. HESS & CLARK, Ashland, Ohio

be possible to get all the good out of Swine Week by reading the paper. It is much better to be on the ground.

Madison will be crowded Swine Week, and there will probably be a larger number of live stock breeders in the city than ever in the history of Farmers' Week programs. The city has a large number of good hotels and all who come will be cared for.

Our readers will not forget the two big hog sales at Madison, Wednesday, February 7th. There will be offered a choice collection of Duroc Jersey and Poland sows, under the auspices of the Wisconsin Duroc Jersey Breeders' Association and the Wisconsin Poland China Breeders' Association, respectively. It will pay to take a trip to the stock pavilion Wednesday afternoon and evening, February 7th, and look over these offerings.

Special features of Farmers' Week include a practical gas engine and farm [illegible] by N. A. Negley, home[illegible]g programs directed by Miss A. L. Marlatt; high school judging contests, directed by T. L. Bewick; country life conferences, directed by C. J. Galpin; fruit school, directed by J. G. Moore, and special work on soils problems, directed by university experiment workers. The Wisconsin Experiment Association and the Wisconsin Alfalfa Order will hold their annual grain show and discussion of best methods for growing pedigreed grains. The grain show will be the largest exhibit of pure-bred grains ever gathered in Wisconsin.

Inoculating Soils For Alfalfa.

It is uphill work to undertake to grow alfalfa on soils that are lacking in certain forms of low organic life. In the absence of these germs or microbes, or whatever they may be called, alfalfa will take on a pale, sickly look and it will not grow vigorously. The crop will make poor headway against weed encroachment and when it is cut for hay the product will in all probability be made up largely of weeds, even though there is a fair stand of alfalfa. The character of the growth can usually be entirely changed if the soil is sweet by the introduction of the kind of infection needed by alfalfa roots. This matter is referred to in the last quarterly report of the Kansas State Board of Agriculture by Prof. H. F. Roberts. He points out that any kind of land that will grow a luxuriant crop of sweet clover, showing tubercles on its roots, is then already properly inoculated for alfalfa. In the case of soil that needs inoculation, two methods are possible—the soil method and the pure-culture method.

The soil method has been found by most of the experiment stations to be the more certain and satisfactory. By this method not less than 400 to 500 pounds of soil per acre is recommended. This may be broadcasted, or sifted, and applied with a fertilizer drill. If the inoculated soil has to be brought from a long distance, then 200 to 300 pounds may be used, mixed with a large quantity of the soil from the field to be inoculated, and applied as before stated. The inoculated soil should be kept in a cool, shady place until ready for use. If the inoculated soil is broadcasted, it is best to put it on in the late afternoon of a cloudy day, since the sun's rays soon kill the bacteria. Immediately after broadcasting the soil should be well harrowed.

Another method, recommended by the California Experiment Station, is to take soil from an alfalfa or sweet clover field in which the roots show an abundance of nodules. To this volume of soil two or three times its volume of water is added. The mixture is then stirred vigorously several times a day for two days and the soil is then allowed to settle. The alfalfa seed to be inoculated is then dipped into the water, which is now more or less filled with the nodule-forming bacteria. The seed is then dried in the shade sufficiently to enable it to run through the drill easily, and it is then planted. If preferred, the inoculated soil may be puddled, the seed mixed with it and the whole mixed with dry soil and planted.

The only objection to the use of the soil method of inoculation is the risk of bringing in weed seeds.

The pure-culture method of inoculation consists in the use of a liquid culture of the root-tubercle germs. This may be obtained free, in small quantities for experiment, from the United States Department of Agriculture.

Big Demand For Short-horn Cattle.

Complying very kindly with a request from The Wisconsin Farmer, Mr. John L. Tormey, secretary of the Wisconsin Short-horn Breeders' Association, has written us the following concerning the Short-horn cattle situation at this time in the state:

Our association has not done anything remarkable during the past year. In fact our breeders have all they can do to take care of the active demand for Short-horn breeding cattle. There [illegible] what might be called a dearth of [illegible]ort-horn breeding bulls, and a Short[illegible]n cow for sale is practically an un[illegible]wn quantity. There has been a [illegible]d call, not only for Short-horns of the beef type, but an extremely active demand for Short-horns of milking strain. The demand for the utility Short-horns has been active, not only in Wisconsin, but has been widespread throughout the United States. An instance of widespread interest and recognition of Wisconsin as a breeding state might be shown from the fact that calls have come to this state from the Pacific coast for good milking Short-horn cows. These orders, however, could not be filled. Local demand for these cattle has been too strong and breeders could not part with their good animals.

During the past year, Wisconsin has sent some excellent Short-horns to the Argentine trade, and this state furnished breeding cattle to practically every part of the Union, and we had in the state of Wisconsin during 1916 the highest-priced Short-horn calf sale ever recorded in the United States. We now have in the state of Wisconsin four county breeders' associations; three of which were formed the past year. This shows active community interest, which is one of the real tests of the popularity of any breed.

The producer of commercial material is the hope for the future of any breed of live stock. The prices which breeders are now receiving for breeding cattle are remunerative and are due in no small part to the high prices r[illegible]ived for provisions, foodstuffs and other materials of commerce. We expect that these high prices will obtain even after the European war closes. We naturally look for some readjustment of values, but do not feel that the readjust[illegible]ent will take the nature of a slump. It will take some years before complete repletion of the European breeding herds can come to pass, and in this country high prices have caused people to sell short of breeding stock so that there is every indication that good prices will prevail for some time, even after the war.

Short-horn breeders of the state, we believe, are better satisfied with their position now than at any time since the introduction of the breed into Wisconsin territory. Short-horn breeders are still talking about the wonderful Short-horn show at the International in December and believe they will profit by this showing. Mr. Tormey has stated the situation very aptly and his remarks are the more pertinent because he has close association with the best breeders of the state and is in a position to know whereof he speaks.

PRESIDENT WILSON AT A HOG SHOW.

The president thought his time well spent in attending the National Swine Show. Can't Wisconsin farmers afford to attend the Swine Week show and exhibition at Madison, February 5th to 10th?

The Tractor in Spring Work.

It is not difficult to find individuals who look with distrust and disfavor on the farm tractor for no other reason than that this form of power encroaches on the domain of the draft horse. Fear is created in the hearts of horse breeders that their industry will be menaced, and to thwart this outcome the tractor must of necessity be opposed. The whole trouble is due to the fact that the problem is not viewed in the light of the general welfare of society, including producers and consumers alike. It will be found in the end that the tractor supplements rather than displaces horse power, and as thousands have already been put into operation in the corn belt, enough data has been accumulated to prove beyond doubt that there is a place for them.

Even the smaller types of tractors will plow anywhere from six to ten acres of stalk or stubble ground in a day and disk anywhere from thirty to forty acres. One instance was called to our attention last year where an 8-16 tractor was harrowing eighty acres of plowed land in a single day. In this case one man was doing as much work with the tractor as could be done by two men with two five-horse outfits. While performing this enormous amount of labor the daily expense for fuel and lubricating oil was no greater than the cost of horse feed required in performing the same amount of labor. On the other hand, when this tractor stopped the expense was at an end, whereas even a maintenance ration of the work horse is no inconsiderable item.

There is no gainsaying the fact that there is a clearly defined advantage in performing certain kinds of farm labor in a hurry. Of necessity our seasons for preparing land for crops are short, and our best crops are raised by those who are equipped with good machinery and good power to handle it, so that the seed bed can be prepared not only quickly, but when it is in good condition. The tractor meets this situation ideally, and while those who oppose its introduction are free to point out the tractor's helplessness in wet weather, they must not lose sight of the fact that most of our soils ought to be let alone when they are soaking wet, because tillage at such a time leaves the soil in a physically unfit condition for crop production. In most cases following heavy rains one can afford to wait until the soil has become fairly well dried out, and tractor owners are well fortified against emergencies of this kind. Every corn grower knows that crop production would be enhanced if, for example, stalk ground on a given farm could all be plowed in a week or ten days, and so much the better if the work could be done early in the season. Weeds would grow and, in turn, be destroyed before corn planting, so that the labor of tending the corn is lessened and in the end the yield is increased.

Those who are debating whether they can use a tractor to advantage or not can well afford to consider the extent to which the tractor reduces the labor of choring. We stated before that when the tractor stops, the expense is at an end, and so is the labor, whereas the attention required by a five or six-horse team means at least two hours a day of one man's time. But cutting out this superfluous labor, time is made available for productive tasks; that is, tasks that earn something, such as those involved in the feeding of live stock, the care of poultry, or to some phase of dairying.

The Real Dual-Purpose Animal.

An interesting communication has recently appeared in a Canadian publication, the Farmer's Advocate, dealing with the question of dual-purpose animals, from which communication we beg leave to quote at this time:

A few years ago, when certain breeders of Short-horn cattle commenced to lay emphasis on milk production in the breed, breeders of the specialized dairy breeds smiled awhile and then emphatically proclaimed that there could be no such thing as a dual-purpose cow. Thinking breeders of Short-horns recognized that it was a difficult task to breed up and establish the dual-purpose type, which if it means anything, should stand for meat and milk, both in fair amount and neither to excess. In Great Britain considerable success has been attained. In Canada and America may be found at the present time a considerable number of cows carrying fairly good Short-horn type and a reasonable amount of mellow fleshing, which at the same time produced in a single lactation period anywhere from 7,000 to 10,000 pounds of milk. Some go much higher, but the majority of these latter are bordering on the specialized dairy cow type, and we have always held that the breeder of dual-purpose cattle was getting on dangerous ground when he shoved milk production beyond 10,000 pounds, and he is much safer to average around 7,000 pounds. Our contentions are borne out by the appearance of the calves from many of these heavy producers.

But this is not what we started out to discuss. Previous to the time Short-horn men began to boost milk in their breed, a little or nothing was heard of the milking qualities of the Hereford, the Aberdeen Angus, or the Scotch Short-horn, and no one took very seriously the man who boasted about the beef qualities of the Holstein, the Jersey, the Guernsey, or the Ayrshire, although the last-named breed, being a hardy, rustling sort, produced some fairly good, light-weight steers. Everything is changed now. There are Holstein men who call their breed the real dual-purpose breed; there are Ayrshire men who see dual-purpose characteristics in their breed; and no doubt some Guernsey and Jersey breeders could be found to praise their respective breeds for their dual-purpose value. We have heard Hereford men talk about their cows being good milkers and Aberdeen Angus breeders do likewise. There seems to be no good reason why breeders of the specialized dairy breeds which have been brought to the present high standard of perfection should attempt to lead themselves or others to believe that their breeds are dual-purpose cattle.

It would be a mistake to make, or attempt to make, dual-purpose animals out of Holstein herds which will average upwards of 15,000 pounds of milk per animal per year. The same is true to a certain extent of Ayrshire cattle. The Jersey, small, economical and efficient, is essentially a butter cow. The Hereford is a great grazer, a good feeder, a maker of big gains, and essentially a beef animal. True, breeders may require their cows to give a fair amount of milk, but they should not emphasize the dual-purpose nature of the breed. The Aberdeen Angus, winner of the strongest competition in the big tests, like Smithfield and Chicago International, is essentially and must remain a butcher's beast. The Scotch Short-horn, a successful competitor on many occasions in the beef ring, must not be ruined by a dangerous infusion of strictly dairy-bred Short-horn blood. There is a dual-purpose Short-horn; there is also a danger of there being a dairy-bred Short-horn, which has no place in view of the excellence of present-day specialized dairy breeds. Why run the risk of spoiling other breeds which are essentially milk breeds or beef breeds?

It is unquestionably true that the policy of pushing too far the characteristic of milk production in these so-called dual-purpose breeds can only end in the establishment of another breed of dairy cattle. Whether the limit in milk production should be 7,000 or 10,000 pounds a year depends upon the extent to which the breeder proposes to carry his program of specialization. Our best breeders of all the beef breeds are retaining in their herds the cows with well-developed udders and it will not be surprising if in the future our best herds of Short-horns, Herefords and Angus are entitled to the "dual-purpose" designation. We would be glad, indeed, to have the comments of some of our readers on the practicability of giving attention to milk production in pure-bred beef herds. How important is this matter, anyway?

The Farmers' Open Forum
WITH CONTRIBUTIONS FROM READERS OF THE WISCONSIN FARMER

[Editor's Note.—Several of our readers have written us their experience in growing potatoes. This is a most important subject especially in the counties where potatoes are grown for commercial purposes. The standard of commercial stock is the table standard—that is, what the housewife likes best to cook is really the best potato—hence the methods used in potato growing sections are applicable to farms everywhere in the state. The next Wisconsin State Potato Growers' Convention, we are advised, is to be held in Madison, and we hope to see this convention arouse our southern and central Wisconsin farmers to the point of better potato culture.]

Fifteen Years of Potato Growing.

To the Editor:—I will try to give you some of my experiences in raising potatoes here in Langlade county, Wisconsin. In the first place, I am very careful in selecting seed. I always cut the potato seed if possible so that I get one or two eyes to a piece for the Rural New Yorkers and three or four for the Triumphs. These are the only two varieties that I grow. I have raised stock from which I started. Some people say that the seed will run out in three or four years, but those are the people who take their seed stock out of the bin in the spring after the choice tubers have been used for table stock all winter. I always dip my potatoes in formaldehyde before planting. The Rurals I plant about twelve inches apart in the rows and the rows about three feet and six inches apart. The Triumphs I plant a little closer, about ten inches apart in rows three feet apart. The first ten years I cleaned up a piece of new land each year to plant the potatoes in, but the last five years I have turned over clover sod in the fall of the year and in the spring I disk and drag it good to get a good seed bed. I use a cultivator until the vines are about six or eight inches in height. Then I run the shovel plow through to hill them up a little, not too much, as I like the hills flat on top. Then we keep busy with the hoe to keep the weeds down. I spray with Pyros and find that it answers the purpose very well. At digging time we dig with the fork so as to have ample opportunity to select the seed for next year's planting as we go along. When we find a hill with five or six nice potatoes all about the same size, we set them all aside for seed. If possible we prefer to get all the seed in this manner. But if we cannot get enough of the hill-selected seed we pick the best of the tubers as they come. My potatoes get better every year under this system. At the Antigo show this year I took first on Triumphs and second on Rural New Yorkers and at the state show at Eau Claire, second on Triumphs and seventh on Rurals. J. W. Smith.
Langlade Co., Wisconsin.

From Barron County.

To the Editor:—I have raised fifty to seventy-five acres of spuds each year beginning in 1911. Last season, however, I did not have the land in shape to raise more than fifteen acres. So I got mostly certified seed. I planted these on new breaking and had a good crop for the year, as in this county the crop was generally short. I kept these potatoes very clean and kept the bugs down the best I could, though it was a bad year for bugs. I did not use anything for blight or scab and still my crop was about as clean as I have ever raised. As I have not used the remedies suggested for these things it is hard for me to tell you what I think of their value. J. S. Crisler.
Barron Co., Wisconsin.

Used Truck Garden Fertilizer.

To the Editor:—The year recently closed was our first experience in raising certified potatoes. We planted these on new land and the planting was very late, June 27th and 28th. We used land plaster with arsenate of lead for killing bugs. We found it necessary to use this only once. As our potatoes were planted so late we did not expect much of a crop. The 1st of September our potatoes were not much larger than beans, but from that time on they did fine and we dug about 100 bushels to the acre about October 15th. We used about 800 pounds of truck and vegetable fertilizer to the acre. Everything considered we were certainly well pleased with the yield and expect to put in a larger acreage next season.
Oconto Co., Wis. J. N. Bassett.

A Young Woman's Experience.

To the Editor:—This was my first year in potato growing. I got my seed from the county agent, Mr. Griffith Richards, but we have also two other kinds of seeds from La Crosse, one kind being a Burbank, a white potato, and the other an Early Ohio, a red potato. The Early Ohios did not do well for us, but the Burbanks were just fine. I selected for seed only the middle-sized ones with the most eyes. I cut them so as to have two or three eyes on each piece. I used a common table knife for the cutting. I planted them in furrows about a foot apart. When they were about four to six inches in height I cultivated them for the first time. After they were about ten or twelve inches in height I cultivated them again and about two or three weeks later did it again. Then in a week or so I took the potato hiller and hilled them. After that I left them alone. I did not have many bugs, so I did not have to worry about what to use for them. Some of our neighbors use Paris green. I dug all my potatoes with a garden hoe, brushed them off after selecting the middle-sized ones, and prepared to market them. When the potatoes are selected for seed they should be selected in the field and the middle-sized ones are, as a rule, the best ones. Potatoes should not be washed off before they are put in a cellar or warehouse, as that is liable to cause spots on them. They should only be brushed off. I believe that white potatoes like the sandy soil the best. They should be planted about the middle of May. We have not lived on the farm very long.
Price Co., Wis. Anna Schiessl.

Has Escaped Potato Diseases.

To the Editor:—In reply to your letter of January 3d will say that I don't use treatment of any kind on my potatoes. I select good, sound seed (White Mammoth or Green Mountain); I think that is very important and I plow up clover sod and prepare same in May and plant as soon as ground gets warm enough. I don't use treatment on the vines, only Paris green and water for bugs. I never had any potato disease that I know of.
Sawyer Co., Wis. Oluf Cook.

There were 2,700,000 hogs averaging about 200 pounds each slaughtered in Wisconsin in 1915. Dressing about 70 per cent this means 324,000,000 pounds of pork ready for consumers.

No Other Six Resembles Hudson Super-Six

Don't Be Misled—It Is a Hudson Invention

Sixes have come into renewed popularity since the Super-Six won the top place. But the Super-Six invention—controlled by our patents—added 80 per cent to the six-type efficiency. And that 80 per cent is what gave it supremacy, when the V-types threatened to displace the Six.

Late in 1915, remember, the Six was a waning type. Even the Light Six, which Hudson gave first rank, had revealed some vital engineering limitations.

It had not solved the problem of motor vibration. It had not minimized friction and wear. Its endurance had proved disappointing.

Sixes at that time held hardly a single record. They were mostly held by Fours.

And leading engineers, including the Hudson, were seeking a remedy in Eights and Twelves. At that time the Six, for high-grade cars, seemed verging on displacement.

What Saved the Day

It was the Super-Six invention, remember, which then saved the day for the Six.

Hudson engineers discovered the shortcoming. By a basic invention they corrected the fault. They ended nearly all the vibration. They doubled the motor's endurance. Thus they created a motor which has since won all the worth-while records.

But that doesn't mean that the old-type Six is any better than it was.

'Twas the Super-Six That Won

The Super-Six, in a hundred tests, has out-performed all other motor types. It has not merely broken records. It has made new records which, a year ago, no man considered possible.

It broke the 24-hour endurance record by 52 per cent. It broke the transcontinental record twice in one round trip. A Super-Six touring car went from San Francisco to New York and back in 10 days and 21 hours.

It beat twenty famous rivals up Pike's Peak. It broke all stock-car speed records, and all for quick acceleration.

Then, after 7,000 record-breaking miles, it showed itself in new condition. Not a part or bearing showed evidence of wear.

No other motor ever built has shown anywhere near such endurance.

All By Saving Waste

The Super-Six develops no more power than other like-size motors. It simply delivers more. It almost eliminates motor friction and wear by ending nearly all the vibration.

That vibration, which wasted power, was the great fault of the Six. It is that which led to the Eight and Twelve as a possible solution. Any motor in which that fault remains can't compare with the Super-Six.

A New Gasoline Saver

The Hudson Super-Six, in endurance and performance, stands foremost in the world. The new style bodies which we have created make the car look its supremacy. A new exclusive feature—a gasoline saver—gives it this year another advantage.

It now outsells any other front-rank car. It has 25,000 enthusiastic owners, who know that no rival can match them.

You can prove in one hour, at any Hudson showroom, that this car deserves its place. And that no other car, at any price, can be classed with it. Do that before the spring demand overwhelms us.

"I'm Here to Stay!"
says the Grouchy Bull:

"I've been up against this Peerless Fence, but it's the toughest proposition I've ever rammed my bony skull into. Fence bends a little, yes, but it comes right back like a steel trap. I give it up—guess my pasture isn't such a bad place, after all."

The grouchy Bull or the inquisitive Porker are equally safe behind
PEERLESS FENCING

That stiff one-piece cross bar, fastened with the famous Peerless Tie, puts an end to roaming. The Bull can't get over and the Pig can't get under.

Peerless Fencing Lasts

Those big open hearth steel, extra heavily galvanized wires will give you the best kind of service. It will give you more dollar for dollar, year after year, and all around satisfaction than any fence you ever put up.

And a good fence deserves a good gate. Peerless Gates are designed to match the Fencing. Big, heavy, high-carbon steel frames, filling of all No. 9 Wire Peerless close-woven fabric, put long life and all kinds of resistance in these gates.

Send for your copy of our big, free Fence Book showing a hundred styles of fencing and several types of gates. We can fit both your ideas and pocketbook.

The Peerless Self-Raising Gate

IS one of the best selling styles in our entire line. It is no longer necessary to lug around the old-fashioned sagging, dragging, heavy gates. The Peerless lifts automatically and swings over all obstructions, snow, ice, grass, and rubbish.

In addition to being self-raising, it is extra heavy in both frame and filling Big, massive frames of 1⅝-inch tubing and close woven all No. 9 wire, close mesh filling, insures long life.

Every part heavily electro-galvanized—no paint to wash or wear off in a year or two.

PEERLESS WIRE FENCE CO., 216 Michigan St., ADRIAN, MICH.

Cow-Testing Reports.

Good Record in Sauk County.

To the Editor:—In this, the ninth month of our testing work, there were 307 cows on our list and fifty-five of these produced forty pounds of butter fat or over. Twenty-four of these produced forty-five pounds of butter fat or over.

The best cow was a grade Holstein owned by William Von der Ohe and she produced 1,745 pounds of milk which made 69.8 pounds of fat. Her feed cost us $8.91, leaving a profit of $19.71 or a return of $3.21 for every dollar expended for feed. She was fed alfalfa, silage, ajax, flax oats and oil meal. Seven herds totaling eighty-five cows averaged over thirty pounds of butter fat per cow. William J. Hahn's herd of six grade Holsteins averaged 1,172 pounds of milk and 46.1 pounds of fat. The William Von de Ohe herd of grade Holsteins averaged 1,129 pounds of milk and 41.1 pounds of fat. The James Carroll herd averaged 1,089 pounds of milk and forty-one pounds of fat.

We believe these records indicate that there are some fine dairymen in Sauk county and men who do not believe in underfeeding cows. We rely greatly on good grade, proper feeding and system and regularity in feeding and milking. Sauk county has four associations, namely: Reedsburg, Baraboo, Prairie du Sac, and Witwen. We expect to have two more before long.

Below is a list of all cows producing forty-five pounds of butter fat or over for the month ending January 6, 1917:

Holstein Has Best Record.

To the Editor:—The Medford Association has just completed its second month of work with some very fine records. There were eighteen cows which produced forty pounds of butter fat and over. A grade Holstein owned by Rudolph Baehler produced 62.37 pounds of butter fat from 1,386 pounds of 4.5 per cent milk.

The following table gives the names and records of cows in our association which produced forty-five pounds of butter fat or over during the thirty-day period ending January 15, 1917:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
R. Baehler					
No. 7, G. H.....	6	Nov.	1386	4.5	62.37
No. 4, G. H.....	8	Nov.	1380	4.4	60.72
No. 3, G. H.....	9	Nov.	1140	4.2	46.3

A. F. Zeddies,
Official Tester Medford Association.

Good Records in Columbus Association.

To the Editor:—A pure-bred Jersey, Sister Empress, owned by Mr Leffingwell made 521.4 pounds of fat or 651.75 pounds of butter in the year ending November 27, 1916. His grade Jersey, Jennie May, made 378.9 pounds of fat in the year ending February 1, 1917, at two years and nine months. Mr. J. E. Barstow, one of our members, cut down his gain to one pound for every three pounds of milk. His cows did just as well and he saved in feed, $100.52. Three more cows have come in, however. R. F. Roberts fed a balanced ration this month in place of bran and whole oats and increased the milk for the month 1,344 pounds, and increased profit of $20.29. A. F. Barstow had the best herd in our association, being an average of 33.4 pounds of fat and 983.4 pounds of milk.

Records of forty pounds for the month were made in the Hutchinson and Burback herds in twenty-two, twenty-seven and seventeen days respectively. The following table gives the names and records of cows in our association which produced forty-five pounds of butter fat or over during the thirty-day period ending January 12, 1917:

Official Tester Colur bus, Wis., Assn.

Importance of Inspecting Cream Separators.

To the Editor:—The Baraboo Cow-Testing Association finished its first six months' work December 23d, last. There were thirty-one members in the association with a total of 480 cows. There are twelve Holstein, ten Guernsey and eight Jersey herds; also one pure-bred herd of milking Short-horns. Thirty-three cows made forty pounds of fat or over last month. The highest record in the association was 71.2 pounds of fat by a grade Jersey. The best cow in the association for six-month period is a registered Guernsey, belonging to Henry Winke, of Portage, Wis. During the first six months she gave 5,754 pounds of milk, testing 4.81, making 277 pounds of fat. The value of her product was $89.99; cost of feed, $27.95, leaving a profit of $62.04. This cow was fed some grain all summer and the grain

Square Deal Fence

This famous fence won't sag or bag. Wires cannot spread. Hogs can't lift it up or crawl under. Knots are smooth and self-draining. All wires heavily galvanized. Requires fewer posts. Costs less to put up. Lasts longer—looks better. Write for the free book. Address

KEYSTONE STEEL & WIRE CO.
8551 Industrial St., Peoria, Ill.

was increased as the pasture grew shorter. Every farmer in our association has his separator tested to see whether the cream is all taken out of the milk. A separator doing good work should not leave more than .03 per cent of fat. Not long ago I saw one losing 9 per cent of fat. This man was getting 594 pounds of milk daily. That milk made a loss of 5.3 pounds of fat daily. Butter fat last month was 44 cents per pound and 5.3 pounds was worth $2.33. This was his loss in one day, and so far as I know he had been running along this way for a month or more. That would have meant a loss of $69.90 for the month. The following is our list of cows producing forty-five pounds of butter fat or over for December:

Grade Guernsey Heads List.

To the Editor:—Forty-two cows in this association produced over forty pounds of butter fat in the month ending January 5, 1917. There were 600 cows enrolled. Silage, hay and a grain mixture of dried brewers' grains, bran and oats is the feed most commonly used. A grade Guernsey belonging to Mrs. A. N. Woodruff heads the list with 1,025 pounds of milk, testing 5.3 per cent and producing fifty-eight pounds of butter fat. The herd of B. L. Snyder had an average butter fat production of 34.8. Frank Lebeis had ten cows in his herd which completed the year's work with an average of 292.3 pounds of butter fat and an average income of $102.31. The average feed cost of these ten cows was $37.80 and the average profit $64.83.

The following table gives the names and records of cows in our association which produced forty-five pounds of butter fat or over during the thirty-day period ending January 5, 1917:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat

R. A. Boyd,
Official Tester Eagle Point and Bloomer Association.

H. V. Bartlett, Secretay.

In Winnebago County.

To the Editor:—I appreciate the space which you devote to cow-testing reports in your valuable paper. The members of our association are always on the look-out for these reports.

On account of shortage and poor quality of roughage our cows are not doing so well as usual.

The following table gives the names and records of cows in our association which produced forty-five pounds of butter fat or over during the thirty-day period ending December 31, 1916:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat

Official Tester Winnebago Association.
Levi Brunson, Secretary.

The trap nest is the only way of telling what each hen in your flock is doing. The trap nest is to the poultryman what the Babcock tester is to the dairyman.

TRY HOG-TONE

60 Days FREE Treatment

FOR ALL YOUR HOGS

Mr. W. O. Gandy, President Avalon Farms Company

IF I don't make your hogs make **you more money**—produce more pounds of pork for you from the same amount of feed—I don't want your money! I am giving you the same opportunity to prove this that I gave Jno. W. Crane, hog raiser near South Whitley, Indiana. He writes: "I selected four pigs out of my bunch—three were runts. I weighed them and they averaged 85 pounds. I fed them Hog-Tone for four weeks. Then sold them eight weeks from time I weighed them and they averaged 221 pounds per hog."

You Can't Pass This By! **Avalon Farms Hog-Tone** is the only Veterinary Remedy ever sold with a guarantee to produce a definite percentage of profit. I guarantee it to produce 400% profit on the cost of the medicine on any hogs **no matter how healthy they appear to be,** and prove it to your own satisfaction. If it doesn't do it I don't ask you to pay a cent.

I know I am safe in making this guarantee. **I know** what Hog-Tone has done and is doing for the herds of other hog raisers. I also know that the market price of hogs is going higher every day—and is **bound** to go higher from now on. There is a **serious** hog-shortage. Especially a shortage of high-grade porkers **—hogs absolutely free from worms—big hogs with sound, clean flesh!** Worms are killing off the hogs!

"More hogs may be lost from worms this year than from hog cholera, and many cases of apparent cholera are only worms," says Dr. J. T. Dinwoodie, Veterinary Specialist of the South Dakota State College. "Nearly every hog is infested with worms," declares the U. S. Dept. of Agriculture. The malignant Thorn Head Worms—Stomach Worms—Liver Worms—Lung and Bronchial Worms weaken the Hogs—affect every sow's litter—make million of hogs easy victims of cholera, scours, thumps, rheumatism, enteritis, gastritis—rob surviving hogs of nourishment their food should bring, cut down their weight and quality at marketing time. Grasp this opportunity to try

AVALON FARMS HOG-TONE

The Liquid Worm Killer and Hog Conditioner
To Treat All Your Hogs for 60 Days—FREE—At My Risk!

Avalon Farms Hog-Tone Costs Very Little

I will ship you one $1.00 bottle of Hog-Tone for each eight hogs in your herd—the day the coupon below, filled in, reaches this office. That will be sufficient to treat your hogs 60 days or more, according to size. This will mean just 12½ cents per hog for all the treatment—and that treatment is guaranteed by me to give you a 400 per cent profit over and above the cost of the Hog-Tone treatment, at marketing time. This is the same opportunity that these men grasped—and made money by doing so.

M. S. McFadden, Poland China Editor of Swine World (who feeds about 1000 hogs annually near Flossmoor, Illinois) advises: "I received Hog-Tone and gave it a test on five pigs. Our farm manager says that it is the best worm-expeller he ever used. **The pigs fed on Hog-Tone have made 25 per cent larger gains than those not fed on Hog-Tone."**

John Heinman, R. F. D. No. 5, Decatur, Ind., states: "I fed the Hog-Tone to a lot of hogs that had the scours. **Some of my pigs had their backs turned up like a rainbow.** In less than two weeks I could not get to the trough to feed them. I do not know exactly what the gain on this lot of hogs was, but I could see a great change in them."

Avalon Farms Hog-Tone is a highly concentrated liquid medicine FOR HOGS ONLY. It contains highly important medical ingredients which are liquids and which cannot be combined in Medicated Salts, Stock Foods or Condition Powders of any kind.

Avalon Farms Hog-Tone is safe. It is very easy to treat your hogs with Avalon Farms Hog-Tone. IT IS EASILY MIXED WITH ANY KIND OF SLOPS, WITH THE DRINKING WATER OR DAMPENED FEED. It is only given every third day for the first six weeks and after that only once a week. 100 per cent strong.

Thoroughly proved on Avalon Farms, near Fort Wayne, Indiana. Cleans out every kind of worms that infest hogs. By doing so, it gives **protection** to your hogs from easily contracting Cholera, Rheumatism, Scours, Thumps, caused by worms and indigestion. Enteritis, Indigestion and other diseases that destroy literally millions of hogs. A simply **wonderful** tonic and conditioner—gives hogs voracious appetites, aids digestion, helps them thrive, grow and put on fast increases of flesh. Makes hogs eager for their feed.

Avalon Farms Hog-Tone is the best known tonic for sows during gestation. Its use insures strong healthy pigs. It is the **reliable** worm expeller which is safe to use at this time.

Don't Send a Penny! Just Mail Me FREE Coupon

Simply tell me how many head of hogs you have—write down your name and address—and mail to me. I will immediately ship you enough **Avalon Farms Hog-Tone** to treat your hogs for 60 days! You simply pay transportation charges. Treat your hogs according to directions. If at the end of the treatment you are not **completely** satisfied—simply return the labels to me and you don't owe me a cent.

Grasp This Opportunity—Mail the Coupon to Me Today!

School Consolidation Pro and Con

What Some of Our State Educators and Farmers Say About This Topic Which Has Assumed Considerable Importance

A SUBSCRIBER from Price county asks us for information regarding consolidated schools. This is rather a big subject, but one which is getting more attention in the state each year, and the arguments for and against the consolidated district are being threshed out as usual this winter. There is a growing tendency to improve the school properties of the state and some patrons feel that several districts joined together can afford a better schoolhouse and better facilities than each could have in separate districts.

OLD AND NEW SCHOOLHOUSES IN DISTRICT NO. 6, BROWN COUNTY, WISCONSIN.

The state of Wisconsin, through the department of public instruction, is putting a premium on the consolidated school by offering state aid. W. E. Larsen and A. A. Thomson, of Madison, Wisconsin, care state capitol, are in charge of rural school work, and a letter addressed to either of them or direct to Mr. C. P. Cary, state superintendent of schools, will receive prompt reply with copies of our laws telling how to consolidate and the propositions which are made on state aid. In the past two years there have been more than 300 meetings in the state to discuss the subject of consolidation and fifty-six counties out of seventy-two had some sort of school transportation in the year 1915. This has been increased and there is still more interest. It must be admitted, however, that there is opposition in many quarters to consolidation. Mr. A. A. Thomson, above referred to as a rural school supervisor, has summed up the arguments for and against consolidation of school districts in a very comprehensive manner and we are indebted to him for much of the information pro and con contained in this article.

OLD AND NEW SCHOOLHOUSES IN SHARON CORNERS DISTRICT, WALWORTH COUNTY, WISCONSIN.

It is argued in favor of consolidation that the cost of instruction is less in a larger district. More pupils may be taught by one teacher. One building may be maintained cheaper than four or five or even three. The salary of several se s of school officers is cut off. By clubbing together several districts united can afford better equipment. One library of books will do for a large school as well as a small one and by combining district funds the libraries may be made of much greater service. Another claim is set up that cost of wear and tear on children's clothes is less where they are transported back and forth to school. This item would probably be so small that it need not be considered as a factor in so important a matter as consolidating school districts.

The second big point argued by the consolidation is that better teachers can be secured. Better teachers prefer larger schools with associate teachers, close to better churches and where in all probability they can get better board and enjoy better social conditions. It is argued that the subjects taught in a larger school are more to the teacher's liking, there are better sanitary arrangements, a janitor does the cleaning and building fires, and the state and pupils rank a teacher higher if she teaches in a graded school. Hence it is claimed that she will like the consolidated school better and will remain longer at one school. It is further argued that the consolidated school offers more competition and interest in common school subjects, games, sports and home project work. Each teacher has more time to devote to classes. She has longer recitations on interesting subjects and few changes of classes. Teachers especially prepared for certain lines of work will be secured for the graded school. There will be enough children to grade them in departments. Classes may be formed in subjects which could not be taken up by one teacher in a one-room school. Better classification and graduation is possible.

GARDNER CONSOLIDATED DISTRICT SCHOOL, DOOR COUNTY, WIS. FINE TYPE OF NEW CONSOLIDATED SCHOOL DISTRICT BUILDINGS IN THIS STATE.

A strong argument for consolidation is that it offers social life which will not be had in the smaller school. There will likely be more pride in the school, it will be the center of social life, of club and contest work, will become a greater object of interest on the part of the parents and the young people just out of school and will have a generally higher appreciation because of its size, and better teachers. Then another argument is that land values will be increased because the neighborhood has a better school, because it may have a high school developing from the graded school and because of the improved social conditions. That the physician as well as the social life of the pupils is safeguarded is the final claim. Pupils are transported in warm, dry conveyances, are taken directly home after school, are at home nights with parents while attending upper grades, and because of less loss in time in getting to and from school have more time for social enjoyment.

There are those who feel that arguments presented on the other side of the case are just as important and who believe that the consolidated district is not really the thing after all. They say in the first place that the teachers in the consolidated school will require more pay. Janitor service will be an added cost, because the "better teachers" will not want to do this class of work in the fine, new

(Concluded on page 29.)

"The Bull Gang with the Bull"

The Tractor That Does Things

Here's what a Big Bull Tractor did for J. H. Algard, Watertown, S. D.

Plowed 22½ acres in 26½ hours.

Hulled clover for 36 days at a total expense of $7 per day, including hired help. Mr. Algard received $50 a day, leaving him a net profit of $43 a day or $1,548 in all.

Hauled a forty-inch separator, weighing 8,000 lbs., 14 miles into the country and returned with another the same day.

Dragged 100 miles of road for which the County Road Commissioner paid Mr. Algard $50.00.

Ran the whole season, doing many different kinds of work, without costing a penny for repairs.

Kerosene or Gasoline

You get, in the "Big Bull," a sturdy light-weight, self-steering tractor that delivers full 10 H. P. at the draw-bar and 20 H. P. at the belt, that is most economical in fuel and upkeep cost and is backed by a real service.

Don't wait till you "simply have to have" a "Big Bull". **Order it Now.** There is a distributor at your farm implement trade center.

FREE! Our new book on **Subsoiling**—relating the profitable crop-increasing experience of several hundred Bull Tractor owners—or three months' subscription to the Monthly Tractor Bulletin. **WHICH DO YOU WANT?**

No Money In Advance

Wonderful Engine Offer!

Only Hartman's with their $12,000,000 capital and over two million customers, can make such an offer as this. Order any size or style Majestic Engine you want—no deposit—no C. O. D.—no security. When the engine comes, work it 30 days, and if you are fully satisfied with it, pay a small deposit 60 days after arrival, and balance in small payments every two months, which gives you a full year to pay, or return engine at our expense.

Great Majestic Engines

For Gasoline or Kerosene

The simplest, most durable, most powerful for its H. P. rating and most economical-to-operate gasoline engine. Not a bit like old style, over-heavy types of gasoline engines which consume enormous amounts of fuel and are, therefore, expensive to operate. Or like others that are so light they literally jerk and tear themselves to pieces. The Majestic is the "happy medium"—neither too heavy nor too light. Perfectly balanced—just the right weight for the power it is designed to develop. Big improvements in all vital points.

Wonderful Engine Book FREE

Gives inside facts on engines; helps you decide the size to buy for your particular needs. Don't fail to get this book. Besides telling you all about Farm Engines, it explains the HARTMAN Selling Plan whereby you can order any Majestic Engine you want without a cent in advance and take a full year to pay—without interest. Mail coupon or postal now.

30 Days FREE

A Full Year To Pay

The Great Majestic Cream Separator

100% Efficient

Built For a Lifetime of Service

Made In Four Sizes: 375, 500, 750, 1,000 lbs. Capacity

Has all latest improvements including remarkable inside oiling device and improved separable disc bowl

Grand Separator Bargain

Order any size Majestic Cream Separator you want—no deposit—no C. O. D.—no security. When the separator comes, work it 30 days and if you are not fully satisfied with it, send it back at our expense and you will not be out one cent. If you are convinced that the "Majestic" is a wonderful bargain and just the separator you want, then you may keep it, making a first small payment 60 days after arrival and balance in 5 equal payments at intervals of 2 months each—giving you a full year to pay.

We make this remarkable No-Money-In-Advance, Year-To-Pay Offer because we want you to learn from your own experience that here, at last, in the "Majestic" is a perfect separator—a masterpiece of mechanical skill and ingenuity—an amazing triumph achieved in Cream Separator construction.

Test it on warm or cold milk and find out by actual results how the "Majestic" skims down to the last drop—note fine condition of the cream—how much quicker and easier it skims than any other you have ever seen. You will find it just the separator you want. Our free trial without money or security offer proves it.

Send For Free Separator Book

Don't buy a separator of any kind or make until you get all the facts about the "Majestic" plainly set forth in our Separator Book. We want you to learn all about this wonderful Separator and compare our low price with prices of cheaply constructed, inferior makes. The "Majestic" on our year-to-pay easy credit terms costs no more than others ask all cash for. Get the proof. It's in this book. If you want it write your name and address in the coupon, place a mark against the name of book and mail today. Book and full particulars of our remarkable selling plan will be sent to you promptly. No obligation on your part whatever. Write now—sure.

Sensational Bargains In Paint and Roofing

Never before such wonderful bargains in Rex-Kote Guaranteed Paints and Hercules Flint-Surfaced Roofing. Write postal or send coupon and get our remarkable Bargain Prices and details of the most liberal credit terms ever devised. Order as much as you want—supply all your needs without sending a cent in advance, without deposit, security, mortgage or red tape of any kind. Just your request brings it to you and after you're convinced that you have the finest paint or roofing—and well worth the prices we ask, you can take a full year to pay without interest.

Think what confidence we must have in the quality of Rex-Kote Paint and Hercules Roofing when we're willing to send it out on such amazing terms. We will ship as much as you want on approval. If satisfied—you make your first payment in 60 days after arrival.

HERCULES Flint-Surfaced Roofing

is exceptionally durable and efficient for every purpose. Heat and cold do not affect it. Is positively proof against all kinds of weather. Made from high quality, long-fibre roofing felt thoroughly saturated with pure asphalt. Both sides thickly coated with very fine sharp particles of crystal, which are firmly imbedded under enormous pressure. Free book shows prices and samples. Send for it now. Coupon or postal brings it.

Rex-Kote Guaranteed Paints

Made of high quality pure ingredients. Guaranteed against peeling, blistering, chalking or rubbing off. Will cover more surface, make a better finish and give long lasting service. Mixed by machinery, pigments and oil ground together until every particle is thoroughly impregnated with and absorbed by the others. This insures greater spreading qualities and more uniform color. You can order as much as you need without sending a cent in advance. When paint arrives, put it on your buildings—if you're satisfied—you can take a full year to pay—without interest.

Wonderful Paint and Roofing Book FREE

ALSO SAMPLES AND COLOR CHART

FARM POULTRY FOR PROFIT.

How a Farmer's Wife Has Increased Her Income From Poultry Through Systematic and Intelligent Methods of Feeding and Breeding.

MISSOURI farmers annually produce and market more eggs than those of any other state. At least such was the case six years ago, according to the federal census report. For a number of years unusual interest has been displayed by Missourians in poultry culture along scientific lines and the chances are that Missouri as a state still leads in this important branch of farming. Until recently poultry raising on the farm has been carried on in a very slipshod manner, and it still is in the great majority of cases; on the other hand, a great many people have come to realize that intelligent [illegible] business on [illegible] is produced by women and that is one reason why such rapid strides in better methods of production are being made, for as a class women are less conservative about adopting new methods than men. Then, too, no great amount of capital is required to raise a flock of high-producing birds, while at the same time such a flock can be built up in a remarkably short time. With cattle the process is a slow one unless one has unlimited means, and that is one of the reasons why so many farmers fail to make as rapid progress in cattle improvement as do their wives in the improvement of poultry.

In these days of high-priced poultry and eggs it is but natural that there should be an unusually strong demand for improved poultry and a desire on the part of thousands upon thousands of farm women to raise the standard of their flocks for producing purposes. However, in spite of the fact that this is a comparatively simple thing to do, a great many women are in doubt as to how to proceed and at the same time a little fearful about the outcome. In view of this we believe that we can do our readers no greater service than to call their attention to the achievements of one woman in building up a highly profitable flock under farm conditions during the past four years.

Seven years ago F. W. Spicer moved from one of the eastern states to Marshall, Saline county, Missouri, where he purchased a quarter-section farm of good qaulity, but with very few improvements. Mrs. Spicer had lived in town for six or eight years and had never raised poultry, except as she had helped her mother on the farm during her girlhood days. In other words, she didn't know much about chickens or any other kind of poultry. However, she was ambitious to raise chickens, so her mother gave her forty White Wyandotte hens and five cockerels. Since possession could not be obtained of the farm purchased the first year, a place was rented, and Mrs. Spicer's chicken quarters were exceedingly poor that year. However, she managed to raise 350 chicks the first summer.

The following year when the Spicers moved onto their own farm, on which there were no chicken quarters, Mrs. Spicer thought she would try Rhode Island Reds and bought several settings of eggs. The year after that some Brown Leghorn eggs were purchased, this under the impression that Leghorns would produce more eggs because of being a special-purpose breed.

We are not mentioning this start as an ideal one, but rather to call attention to the fact that Mrs. Spicer had practically no knowledge of chickens when she began in the poultry business, and, therefore, did not know what breed she wanted to raise. During those three years of getting acquainted with hens and breeds she did a good deal of reading and studying. A number of books on poultry were read and digested; bulletins on various phases of poultry culture were received from the Missouri Experiment Station at Columbia and from the Missouri State Poultry Experiment Station at Mountain Grove. From these publications she learned how a poultry house should be built, how a hen should be fed, what was meant by a balanced ration for egg production, and why it was necessary to supply the hen with food of a certain composition in order to get the largest number of eggs from her that she was capable of laying.

ONE OF MRS. SPICER'S PRIZE-WINNING COCKERELS.

The knowledge which Mrs. Spicer acquired from books and bulletins during the first three years of what might be called "experimenting with poultry" is the basis of her success today. She began, not on the assumption that she knew all about how to raise chickens, nor with the idea that there was nothing to learn about the business that would require study on her part, but rather with a conviction that the men at the experiment station, who had spent years in studying poultry culture, could tell her many things about the business and thus be of incalculable assistance to her. She didn't assume that the feeding of a balanced ration was theoretical, impractical nonsense, or that it was something to be read about, but not to be put into practice. On the other hand, she started to feed according to the formulas the experiment stations recommended and with the utmost confidence in the results that would follow, and she wasn't disappointed. Feeding according to definite rules in regard to feed mixtures materially increased the average number of eggs from her hens; in fact, the closer she followed directions, not only with respect to feeding but also in regard to housing, sanitation, culling out of inferior birds, etc., the larger her egg checks became.

A 20x80-FOOT HOUSE WITH ROOM FOR 400 HENS—FOUR COMPARTMENTS.

This preliminary work resulted in Mrs. Spicer gradually disposing of all her colored chickens and early in 1912 buying 100 S. C. White Leghorn eggs, which became the foundation for her present flock. This change was made because she had come to the conclusion that White Leghorn hens laid standard weight eggs, the color of eggs she liked best, and which command the highest market price—2 cents more per dozen than brown eggs on western markets. And by getting into the largest strain of this breed she would get large eggs that in her opinion would always find a ready market at a premium. She liked chalk white eggs and white birds and why not raise the kind she liked best so long as she was going to give them the very best possible care and attention that she knew how to give? Why not, also, buy eggs from the very best stock of the variety she had chosen? It made comparatively little difference whether she paid $10 or $40 for the first 100 eggs from which she was to lay the foundation of her flock so long as she got her money's worth, and this she had no doubt about getting by buying from a well-known breeder who had been recommended to her by someone who knew all about the man.

A TYPICAL 20x40 HOUSE WITH TWO COMPARTMENTS AND ROOM FOR HOUSING 200 HENS COMFORTABLY.

If you were to visit Mrs. Spicer's flock of pullets and hens, of which she now has 750 head, as we did a short time ago, you would agree with her that it pays to start with the best foundation stock obtainable and then keep it up to standard by introducing superior males. Mrs. Spicer has laid down two rules for her own guidance as a poultry raiser which are never changed or violated. They are: First, always feed liberally of the right kind of feed, regardless of price; second, always buy the best obtainable males with which to mate the breeding hens and never let price interfere with carrying out that plan. Given first-class stock to start with, it can readily be seen that by following these two rules to the letter her flock is bound to be a good one and that it must improve from year to year. This is exactly what has happened. Her birds are uniform in size, shape and quality and each year's pullets are a little better egg layers than the old hens they replace, because they are bred to lay large, uniform, chalk white eggs.

To show what her 450 hens did in the way of egg-laying from January 1, 1916, to September 30, 1916, Mrs. Spicer kindly gave us the following record from her ledger showing the number of eggs laid per month: January, 2,583; February, 5,589; March, 8,880; April, 10,687; May, 9,504; June, 7,260; July, 4,572; August, 4,022; September, 3,336. Total, 56,433 or 125 eggs per hen. This is 10.43 dozens per hen for nine months.

While Mrs. Spicer's chickens have come from bred-to-lay stock of the highest order one must not overlook the fact that feeding is just as essential to egg-laying as breeding. No matter how well bred a hen may be, unless she is properly fed and cared for she will not lay up to her capacity. For this reason we wish to speak of Mrs. Spicer's method of feeding, which, as has been stated before, however, is not original with her, but is based upon the recommendations of the Missouri Experiment Station. Roughly speaking, the plan is to feed one-third of the grain ration in the form of a dry mash and the remainder as whole or cracked grain—scratch feed. During the winter season the dry mash consists of the following mixture: 100 pounds wheat bran, 100 pounds shorts, 100 pounds finely ground corn, 50 pounds meat scraps and 3.5 pounds of salt and charcoal. The scratch grain is composed of one-half wheat and one-half cracked corn. The latter is fed in litter, half in the morning and half at night, just before the birds are ready to go to roost. The dry mash is fed from hoppers to which the hens have constant access. Grit, oyster shell or lime is kept before the birds at all times. A hen will consume approximately fifty pounds of scratch feed and twenty-five pounds of dry mash a year.

Mrs. Spicer invariably has excellent success in rearing chicks notwithstanding that she hatches her chicks very early in the season. This is partially due to the method of handling the hens that are used for breeding purposes. Her breeding flock this year will consist of five pens of fifteen hens each picked from second-year birds, not from the pullets. The most vigorous birds showing the best egg-laying qualities are selected and mated with strong, vigorous males. They are then given special attention with a view of maintaining them in

Are *You* Living on the Chickens?

By H. H. Johnson

H. H. Johnson
"The Incubator Man"

AN odd confession came to light the other day. One of our nearby customers came into the office and among other things said, "Do you know it just dawned on me that during the five years we lived in Texas the wife kept me and the children? She raised chickens and always seemed to have money. The children were never without good clothes, and grocery and meat bills were always paid. I cannot recall of having taken care of these things, and I really believe that her poultry kept us while I kept myself busy farming."

I wouldn't doubt this. I have received many letters from farmers who admitted that their wives made more dollars from poultry than they made dimes farming. This is no reflection on grain and stock raising but it shows what poultry can do when put to the test.

Of late years, more farmers are taking to poultry raising. Instead of leaving it all to the women folks and cussing every time the hens roost on the buggy or farm machinery, they are providing for poultry houses and giving the chickens a place to stay. They find that it pays. Maybe the chickens require a little grain. But so do the hogs. And what farmer couldn't raise a few hundred chickens for the time and expense put in on raising half a dozen hogs?

The old order of things is changing. The poultry farmer has found it profitable to look at his chickens in the same light that the dairy farmer looks at his cows. That is so far as the money-making possibilities are concerned. But instead of having to buy feed for his poultry, the chickens can be fed the scraps from the table, and the waste from the feed bins and feeding that cattle and hogs tramp into the mud.

You Can Live Well on Poultry Profits

No one is too poor to raise poultry profitably. And it takes less expense, less work, and less management to make farm poultry pay than any other kind of poultry. By farm poultry I do not necessarily mean mongrels. I am of the opinion that most poultry is now pure or cross breeds of two pure varieties which should not be classed as mongrels.

There is not much capital needed for starting. Some unused shed can do for the chicken house, hence no expense in that direction. About the only equipment needed is a good incubator, a brooder and the eggs. If the incubator is built right, no special room or cave is needed for it. It supplies its own protection from the weather. The same can be said for the brooder, although it is always well to set the brooder in a big box, such as a piano box, so that the little chicks can run around with comfort.

The best farm incubator is the one that runs itself and that can be depended upon to hold the heat even in cold weather. Lots of times argument is made on one or two special advantages. Usually these are real advantages but they are played up to make the reader overlook defects in some vital point which cannot be corrected because others hold exclusive patents, as for example our Old Trusty heating system. We have exclusive patents on this system.

This year as eggs and poultry are high, there is a tendency on the part of small town folks to get into the business. We make an Old Trusty in 100 to 120 size with a California redwood case that is adaptable for such folks. Also it's less expensive. With 120 eggs and this little Old Trusty "Special" you can start in the poultry business and in seven months time have a good sized flock of layers. The cost would be about $15 to $17 for pure bred eggs and the incubator.

A flock of only 50 laying pullets this fall should be worth $50.00 at $1.00 each, or if kept for layers should bring twice the amount in income. In most families, some member makes the incubator their special care and it does not interfere with the work. The spring fries are welcome to the family table or bring big market prices.

It has been our experience that an investment of a few dollars to start early hatching means 200 to 400% profit. On a bigger scale it wouldn't do it, of course. In fact the money in poultry is in carrying it on in a small way. I am not, you see, offering you a proposition that means a fortune or bankruptcy, but just a plain business proposition and it makes me less than $1.00 and you from $40.00 up according to the attention you want to give it.

At this writing we have a little over 700,000 customers. We have dealt with more poultry raisers and sold three or four times as many incubators as any other concern that I know of. I believe this success is due, first to our practical common sense incubators and brooders; second to our knowledge of poultry raising as 95 per cent of the people have to raise it; third to our plan of facing the proposition fairly, striking the average without playing head lines of sensational and unusual successes, of which we have our share; and fourth to our settling down to business here in Clay Center, Neb., among the people who bought our first machines.

We built from the ground up, and have grown year by year. We stuck hard and fast to making incubators and brooders, built with a construction that was right in the first place and that did not call for changes every year, or new faddish frills to help them sell.

We have always tried to give a well-rounded value, a proposition with meat on the bone, so to speak. Yet we do not sell anything for less than it costs. Our profit is a fair one, about seven per cent, so that it is not necessary to ask two profits to make up losses somewhere else.

Are You Selling Eggs or Buying Them?

Now, Reader, it would not be good business for me to urge you to take up something that you could not make money on. So whether you decide to do business with us or not, let me give you this one point. There's good money to be made in poultry raising. This year is a year of opportunity—meat prices are high and it looks as though they will be higher. With the increasing cost of living everywhere, poultry could prove more than handy to help square off the table expenses.

Our new annual catalog deals with profitable poultry raising and we are always glad to send a copy free. Also we like to write letters. If you have any poultry troubles, tell us and maybe we can offer a suggestion or two that would fit. Write for our book anyway and let's get acquainted.

Table Scraps Make Good Feed

No incubator is better than its heating system, H. H. Johnson, "the Incubator Man."

Big oil drawer can be removed instantly but does not require removing to be filled. Holds 5 to 6 quarts.

1917 Conveniences
Make Big Hatches Easier Than Ever
Old Trusty

EASIER hatches, but not *bigger* hatches, because no feature could improve Old Trusty's present record for higher average hatches year in and out, even in coldest winter weather. I call these new conveniences work savers. And they are big work savers, too.

Note the big oil drawer. It slides away in under the case—big enough to hold five or six quarts. Saves filling the lamp bowl every day.

Next, note the handy thermometer holder on the door. I don't want to be accused of saying this would make bigger hatches, but if easier watching means better watching and correct temperature then this device helps for bigger hatches. Open the door and the thermometer comes out. Instantly in view. No fumbling over the eggs—saves stooping and delay.

M. M. Johnson
Inventor of "Old Trusty"

Write for Catalog

Of course these new work savers are not the big things to look at in Old Trusty. No one part of Old Trusty is any more important than another. We make *each* part of Old Trusty as though your entire hatch depended on that one part.

For example, note the heating system, the part I am holding in my hand. I won't attempt to describe it, except to say that it's all copper and lock jointed and built on a plan that puts even heat all over the eggs. Note the shape of the discharge pipe in center and return pipes on the outside. Allows no cold corners nor hot centers.

Only **$9.60** Buys this redwood cover Old Trusty—freight paid east of Rocky Mountains—a trifle more farther west.

Quick shipment from factory at Clay Center or warehouse at St. Joseph, Mo., or Seattle, Wash.

Here's the money-saving sensation of 1917. It's Old Trusty through and through—same as we sold in 1908, which machines are still in good service. This is 120 egg size.

Quick Shipment—Mail the Coupon

In spite of OLD TRUSTY'S unbeatable construction it is not expensive. It's made in the largest exclusive incubator and brooder factory in the world. That's why we can give you such a big value for your dollar in OLD TRUSTY Incubators and Brooders. Write for our catalog telling all about them and giving you the "know how" on poultry raising.

Have fat broilers to sell at high prices in June and July and laying pullets in October and November. It's easy—thousands are doing it—let me show you how. Write today for our book if convenient, and tell us your poultry troubles. Yours truly, H. H. Johnson.

Address _____

Town _____ State _____

Write a letter if convenient and tell us your poultry troubles. Mention how many chickens you keep, whether hens lay in fall and winter, whether you have used an incubator and have been successful.

strong condition. The result of this is apparent in the young chicks as soon as they are hatched. All chicks are hatched in incubators and from eggs not over seven days old when incubation begins.

As soon as the young chicks are perfectly dry they are removed from the incubator and put into a room provided with a special brooder stove which keeps them warm (90 degrees on the floor) without much attention from an attendant. With this stove they can move near to or away from the heat as they please and the air in the room is always pure. When forty-eight hours old or older they are given their first food, mixed as follows: Two pounds rolled oats and one pound wheat bran, plus a small amount of granulated bone meal, grit and charcoal. They are also given a little buttermilk, this being considered especially valuable in maintaining the digestive tract in a healthful condition [illegible] days [illegible] feed is changed to the following: Two pounds wheat bran, one pound shorts, one pound corn meal and one-half pound pinhead oat meal, plus charcoal and bone meal. The scratch feed after six weeks of age consists of equal parts by weight of cracked corn and whole wheat, with dry mash always before them.

Each chicken house is provided with a good-sized yard, fenced with high poultry netting—about five acres in all being fenced in that way. During the growing season these yards are seeded to oats for green feed. The sprouted oat kernels are scratched out of the soil by the chickens, or, if not found, the oats come up and are eaten down by the birds. During the winter season green feed is furnished in the shape of beets, turnips and other root crops. These are not sliced, but thrown into the henhouse and the birds allowed to pick at them at their pleasure.

One thing that strikes the average farm poultry producer as somewhat novel in Mrs. Spicer's yards and poultry houses is the absence of roosters. Male birds are kept only in the breeding pens from which all eggs for hatching are taken. Males are never allowed with the hens and pullets that lay eggs for the market, because all eggs sold for human consumption are guaranteed infertile both in winter and summer. As soon as the young roosters are large enough—when they weigh from one and a quarter to one and a half pounds—they are caponized by Mrs. Spicer herself or the work is hired done at a cost of 10 cents per head, and when the breeding season is over the roosters are taken away from the breeding pens and put in a yard by themselves.

This method not only makes the handling of the hens easier but greatly raises the quality of the eggs, especially during the hot season. Then, too, it effects a considerable saving of feed. The young males grow much more rapidly as capons than they would as cockerels and besides make greater gains in weight from a given amount of feed. As stated above, since all Mrs. Spicer's market eggs are infertile they sell at a premium. She ships her market eggs to commission men in St. Louis or Kansas City by the case and obtains from 13 to 15 cents net a dozen above the price paid locally by grocerymen or egg buyers. From January, 1916, to June, inclusive, her eggs sold for an average of 4 cents a dozen over local prices after transportation charges had been paid, and during the last six months of the year she obtained an average of 10 cents more per dozen net. It pays to supply a first-class article for the market if one will look about and find the right outlet for it.

In regard to poultry houses, as the illustrations herewith presented show, Mrs. Spicer does not have fancy buildings for her birds; at the same time, they answer the purpose as well as if they had cost 300 per cent more. Each house is 40x40 feet in size divided into two rooms of 20x20 feet each. The buildings are eight feet high in front (south side), and five feet high in the rear, each being provided with dropping boards, roosts and nests approved by the University of Missouri. The fronts are left open for ventilation, but are provided with curtains made of strong bed ticking, to be used on stormy nights. The roofs are covered with two-ply rubber roofing which material is also used for the walls. Lumber is employed only for the framework and floor of these houses. In the early built houses dirt floors built up above the level of the surrounding ground are used, but the last two built are provided with good matched pine floors, the latter being considered more satisfactory.

Mrs. Spicer not only raises eggs for the market but also sells eggs for hatching and birds for breeding purposes. To help advertise her business she has begun exhibiting some of her birds. At the recent 400-bird poultry show held at Marshall, her own town, she was awarded the following: Best White Leghorn cock and cockerel, best cock in Mediterranean class, best cockerel in show, the A. P. A. medal for the best cockerel in show, three colored A. P. A. diplomas, three S. C. White Leghorn Club prizes, first and third on hens, first, second and third on white eggs, and the state cup for best display. At Louisiana, Missouri, she captured first on cockerel, where she exhibited but one bird. At the recent poultry show at Odessa, Missouri, Mrs. Spicer also won a number of important prizes, among which were first Leghorn cockerel, grand champion male in the show with a score of 95½, first and second pullet, best pen of Leghorns, and the state cup for grand champion pen of the show.

The point to this story is that through intelligent management Mrs. Spicer is obtaining an average of twelve dozen eggs per hen, almost twice the average number for the state as a whole, and is selling those same eggs at an advance of from 24 to 33 per cent over average local prices. Her flock has grown to 750 hens and will be increased to 1,000. When that has been done it will be an easy matter for this progressive lady, who believes in up-to-date methods of handling her flock, to net $1 per hen per year. What Mrs. Spicer can do others can do equally well, if they will change from slip-shod methods and put the work on a rational business basis.

Mating Up the Breeding Pen

To the Editor:—In writing this article I am telling of what I found the best way to mate up a breeding pen for the farmer and small poultryman, but not for the fancier, as the fanciers use more care and there are many more fine points that he has to watch.

The first thing to decide is what breed. Now, nearly all breeds can be put into two classes, the heavy breeds or the light breeds. The ones breeding the heavy breeds say that you have more meat and you get more from the market; the lighter breed adherents will tell you that the lighter breeds mature quicker and lay more. But be that as it may, after you have decided on the breed next pick your breeding pen. Now is the time to pick the birds that lay. A winter layer is the best hen to breed from, but the main thing is to pick that layer. On the big farms they have the trap nest; that is what we use, but here is a method I would use if I did not have the trap nest. The bird that meets you in the morning when you come out with the feed is the one that is laying the eggs. The ones that are always busy may not look red and plump, but if she is scratching around and always keeps working for more to eat she is the bird for you, as she needs the extra feed for the eggs. You will nearly always find her the first out in the morning and the last in at night. If you examine the fowls at night the ones with the full crops are the ones that lay. The laggards are the ones with the half-full crops and the ones that sleep the longest. Now you may be fooled on some of these birds, as some you will think lay, as you see them in the nests, but if she isn't a busy bird around looking up feed you had better watch her and nine times out of ten you will find that she goes into the nest not to lay but to get warm or rest. After you have picked your layers, look over your birds, see which are the largest and the best type and be sure that you have only birds that have never been sick. Next see that all are well formed; that none have crooked toes or bent kneels. With the heavy breeds I would never mate more than six to eight hens to one male. With the lighter ones you can go all the way from twelve to twenty with perfect safety.

Now to pick your male bird. If you pick the right male bird your success as good layers and early maturing pullets will be the fruit of your breeding pen, for I have found that it isn't the good laying hen that gives you the best-laying pullets, but if your male bird comes from a hen which has a good egg record then he will give you pullets that will fill the egg basket. If you haven't such a male bird I would advise that you go to a reputable breeder and tell him that you want a good male bird with an egg record back of him. If you mate this bird to hens you will want the male bird to be a fully matured cockerel; if to pullets then to at least a year-old cock bird. When picking out your male bird, if you wish to improve your flock then pick out a bird that has more than an abundance of the qualities that your females lack and vice versa. If you have what is commonly called scrubs I would advise that you get a male bird of whatever breed you decide on and mate him to some of your best scrubs, that is, if you do not wish to tie any more money up into what is termed "fancy chickens" and then next year pick out the best that comes up to that breed you will soon have all chickens of the same color and looks. And what looks better

The Fact-Packed 1917 Book That Points the Way To Bigger Hatches Free

WRITE for it *today*. It is a handsome book—one that will interest you intensely. One that will help every poultry raiser to *add* to his income—to increase his hatches—to assure bigger hatches of sturdier chicks. One that will *add* to your knowledge of genuine incubator values—enable you to *know* positively what to expect and *demand* in the incubator you buy. Write for it—read it—and learn the secret of the wonderful hatches assured to users of

X-Ray Incubators

One Gallon Oil—One Filling to the Hatch

Express Prepaid to Practically All Points

Fill the big oil tank of the X-Ray Incubator just once—at the beginning of the hatch. Light the lamp—in fifteen minutes the temperature in the hatching chamber is exactly right—other incubators require four to five hours. The big X-Ray tank, squarely underneath, holds enough oil to last during the entire hatching period. The lamp's flame is scientifically adjusted by the X-Ray Automatic Trip. The flame is automatically decreased or increased as needed. No cold corners, no wasted heat, no "cooked" eggs—none chilled.
And the Five New 1917 Features make the 1917 X-Ray Incubator better than ever. X-Ray Gas Arrestor—new ingenious device that prevents lamp fumes entering egg chamber; X-Ray Nursery Tray, new feature that assures sanitation, protects little chicks; X-Ray Egg Tester, most perfect, handy tester ever conceived; New Handy Height; New 1917 Quick-Cooling Egg Tray. All new, exclusive X-Ray features that make poultry success sure. Be sure to write for the 1917 X-Ray Book *tonight*.

X-RAY Brooders

Built this year with famous X-Ray Duplex Heater, assuring uniform and properly distributed heat. Canopy top that protects chicks against draughts and excessive sunlight. Write for our

Wisconsin Wins In Big Hatching Contests Every Year

Why Pay More

For only $10 you can get these two prize winning machines, delivered, freight paid east of the Rockies. You take no risk—money back if not satisfied. You can order direct from this ad. Ask the publisher about us.

Both Machines $10 Freight Paid For Both

Wisconsin Incubators have long proved their wonderful hatching qualities. Competing with every make known, they won in the five big annual National Hatching Contests. Think of it. Five consecutive victories. That certainly proves you can't make a mistake. Shipped on 30 Days' FREE Trial

MONEY BACK IF NOT SATISFIED

10-YEAR GUARANTEE

180 Egg Incubator and 180 Chick Brooder both for only 12.75

Wisconsins have hot water heat, double walls, air space between double glass doors, copper tanks and boilers, self regulating. Nursery under egg tray. Made of finest, select, clear CALIFORNIA REDWOOD, not pine, paper or other flimsy material. Incubator finished in natural color—not painted to cover up cheap, shoddy material. Incubator and Brooder shipped complete with thermometers, egg tester, lamps, everything but the oil. This is the best outfit you can buy. If you don't find it satisfactory after 30 days' trial, send it back. Don't buy until you get our new 1917 catalog, fully describing this prize winning outfit. WRITE FOR IT TODAY. You can't make a mistake in buying a Wisconsin. On the market 15 years.

than a flock of poultry all of the same kind. You will be surprised when you take a bunch of poultry to the market what a better price you will get for them than a bunch of all kinds.

Just a few words in regards to keeping hatching eggs. Keep the eggs in a place that is well ventilated and of an even temperature of about 60 degrees; not any warmer than that. Do not have them in a damp place. Turn eggs every twenty-four hours at the least. Hatching eggs should never be kept longer than fifteen days; the quicker you use them the better.

La Crosse Co., Wis. Wm. Friese.

FACTS ABOUT CAPONIZING

Value of Capons and Description of Best Methods For Operation—By J. C. Halpin and O. N. Johnson, Wisconsin Experiment Station.

A WELL-FATTENED capon is usually worth, during the winter, just as much as his feathered brothers—the cockerel and the rooster. At all times of the year the price paid for capons is higher than the price paid for uncaponized birds.

With the exception of a few of the best which are kept for breeding purposes, all of the male chicks should be caponized. That too few persons in Wisconsin make use of the simple operations of caponizing is due largely to a lack of knowledge concerning the necessary methods of treatment. Almost anyone can learn to caponize if the simple directions given in this bulletin are followed.

A capon is a male bird from which the reproductive organs have been removed. The results are similar to those produced in pigs, cattle or horses. The caponized bird becomes more docile and sluggish, his comb and wattles cease to grow, and he is no longer able to crow. But his saddle and tail feathers will grow unusually long and silky, his head will look too small for his body and he will put on more and sweeter meat at less cost than if left unaltered.

USING A HOMEMADE TABLE.

A great many farmers keep a large number of cockerels for table use. It would be much better if these were caponized. The operation is simple and practically safe. It would then do no harm for them to run with the pullets. They can be taught to brood young chicks and they are much better feathered, larger and slower in their movements than the average hen.

It would not be advisable to caponize all breeds for market purposes. The Mediterranean class, such as the Leghorn, would never pay on account of their small size. But if they are kept for home consumption they should be caponized.

A BARREL CAN BE USED.

Weak, sickly or stunted cockerels should never be caponized because they have not enough vitality to recover from the operation or make satisfactory gains. It is the birds that weigh six to ten pounds when mature that are in the greatest demand, since that is the size fowl used by the average family.

The proper time to caponize is just before the comb begins to redden and when the testicles are about the size of a navy bean. If the cockerels are of the American class they should weigh from one and one-half to two pounds. A Leghorn should weigh about one-half pound less. The operation should never be performed upon a mature bird, for it would cause a great loss of blood, which usually proves fatal.

The required set of instruments consists of a knife, spreader, tearing hook and remover. With the exception of the knife these instruments have to be especially made for the purpose and cost from $2 to $5. Two barrels should be provided, one to operate on and the other to lay the tools on, and also a dish of 2 per cent carbolic acid solution. If many birds are to be operated upon it pays to make a table to lay on the head of the barrel. The table consists of two one-inch boards, twelve inches wide and twenty inches long, which are joined together at one end with strong hinges. Nails are driven in two inches apart on each edge of the upper board. A loose block which can be moved to secure the desired angle to catch the direct rays of the sun is placed between the boards.

Until a person becomes expert at caponizing he should only operate when and where he can have the most light. The first attempt should be made on a dead cockerel so that one can take time enough to learn each step and not be unnecessarily cruel. Kill a cockerel of the right size, caponize it and then use it for the table.

The cockerels to be caponized should be kept in a cool, dark place without food or water for about thirty-six hours before the operation. This is for the purpose of emptying the intestines and in order that there will be less hemorrhage.

To perform the operation the bird should be placed on the barrel and one end of a cord tied around his shanks and the other around a weight about that of a half brick. With a similar cord and attached weight the wings should be bound together close to the body. The leg weight is placed over one side of the barrel and the

Did You Have "Good Luck"
With Your Chicks?

"Luck" with chicks starts with the incubator. If it is properly heated, **properly regulated,** and properly ventilated, your chicks will start off with vitality. They won't come out of the shell **half dead.** So many people trust their eggs to a cheap machine, forgetting that it is not only how many you hatch that counts, but how many **live and grow.**

Start Your Chicks With a Queen Constitution

The Queen has a reputation for hatching **strong, healthy chicks.** It is built of genuine Redwood—very scarce in these days of cheap substitutes. Redwood does not absorb odors from the hatching eggs. Cheaper woods, and pasteboard lining in iron and tin machines, retain the odors to weaken and kill the hatching chicks.

Queen incubators are not cheap, but they are built to **hatch big hatches of chicks that live.** Book sent free.

wing weight over the other side. If the table is used the cord should be placed near the top on one side and near the bottom on the other for large birds. If the birds are small the weights should be nearly opposite.

In this position the bird is stretched out ready for the operation The feathers should now be moistened and plucked out between the thigh and the third rib, the skin drawn to one side, and the last two ribs located with the end of the first finger. The point of the knife is now inserted between these ribs about one-half inch from the center of the back between the ribs making the incision about one inch long. If any blood appears it should be sponged off with the solution of

THIS SPREADER CAN BE SET AT ANY DESIRED WIDTH.

carbolic acid. The spreader should now be inserted, being sure that each side of the spreader is against a rib, and opened as widely as possible without tearing the flesh. With the hook tear an opening through a thin membrane which will have been noticed after the insertion of the spreaders. Then with the probe or remover gently press the intestines away from the back. The upper testicle should now be in plain view.

As stated before, the testicles should be about the size of a navy bean. The color should be a rich yellow. If they are pinkish in color the bird is too matured.

Next comes what is usually the only dangerous part of the operation. Insert the remover, lightly move the testicle in order to make sure of the location, and then gently grasp it, being sure not to go any deeper than necessary, since a large artery lies close to the back of the testicle. If this blood vessel is ruptured the bird will bleed to death at once. The remover must be closed so that no part of the testicle will slip through and then slowly withdrawn with a twisting motion. If the connecting membrane is not all broken away when the testicle is nearly removed it should be cut or scraped loose. If any foreign matter has entered the wound or any

EXTRACTOR USED IN CAPONIZING.

blood escaped it should be carefully removed with a damp cloth or cotton.

The spreaders should now be removed, the bird turned over and the operation repeated. After one has become an expert the complete operation can be performed from one side.

After the operation has been performed the bird should be placed in a coop where there are no roosts and given soft feed and water. In about three days they should be looked over for wind puffs, and if they are found, a very small cut through the skin will relieve them, no harm resulting from this. At the end of a week the capons can be turned loose with the rest of the flock. Some do this as soon as the birds are caponized, but it is not advisable. Before turning them loose they should be marked. One way to do this is to sever the nail of the right middle toe.

Speed cannot be expected in the beginner. Some birds will die and a small per cent will be slips which are caused by a small portion of the testicle not being removed. These birds will develop the same as the cockerel except that they will not have the power to reproduce and should be disposed of as soon as possible.

To the Beginner.

To the Editor:—To one who has never bred poultry of any certain breed, but are hit by the "hen fever," which seems to get the best of a great many of us about this time of the year, especially when we have had a chance to visit a poultry show and there get a chance to see the many different varieties of poultry and compare them side by side there is always one or two breeds that appeal to us above all others.

If you are fortunate enough to be able to look over the entire exhibit and can leave the show room feeling that you have at least found the breed you are sure you can tie to, then is the proper time to invest a few dollars for either a good trio or pen or a sitting of good eggs.

After you have decided to make a start buy the best you can afford. If you do not know just where to invest your money subscribe for one or more of our leading poultry or farm journals and look over the many advertisements and no doubt you will be able to find many an advertisement that offers just what you are looking for. Any of the hundreds of poultry breeders who sell their stock and eggs through the columns of the poultry and farm journals will give you a square deal and also help you in a great many ways in making your start.

You must also remember that the location has a great deal to do with the selection of a breed. For the city fancier who has only a small space to devote to poultry the Plymouth Rocks, Wyandottes, Orpingtons, Rhode Island Reds, Sussex, or any of the other heavier varieties, make an ideal fowl for the city. They are unusually tame, as a rule stand confinement well and can be kept in a small inclosure.

If you prefer a breed that will look clean and neat and not show the dirt and smoke of the city I would suggest the partly or dark colored birds. Any of the above varieties would give the very best satisfaction. They are large and the young chicks, when properly fed and taken care of, grow to broiler size in from twelve to sixteen weeks and many a city fancier has had broilers at a younger age than this. As layers any of the American class will not be found loafing on the job very many days during the year, providing you have started with a good-laying strain. Of course, we must allow for the time spent in hatching and rearing of chicks and also during molt.

For the farmer or suburban poultryman who intends to keep a large number of fowls the year around and have eggs and market poultry in mind the Langshans, Minorcas, Anconas, or any other of the lighter breeds, would be best suited to their wants. The Leghorns, perhaps, would be the best all-around fowl where eggs are the main object. Although small, they are perfect egg machines. Being non-sitters they do not waste any time hatching and rearing chicks, but instead utilize this time in shelling out eggs. A great many Leghorn hens have records of better than 280 eggs a year, and in some instances they have surpassed this mark. Being great foragers, Leghorns pick up a great amount of their feed when allowed to range at large over the farm. They can be kept in confinement if necessary and seem to do just as well as when allowed their freedom. The young chicks are generally spry and full of life, and, as they feather out much sooner than the heavier breeds, they do not use up their strength and vitality in growing feathers, but can use the same to put

Collars That Cure—Prevent Sore Necks

Extreme care in the shaping, the building, and in the selection of materials used has produced in the Scotch Knocker a horse collar that entirely overcomes galled necks and sore shoulders.

The Scotch Knocker Collar works with your horse, assists him. It responds to every play of the muscles, snugs into every neck hollow, and lays back soft as velvet, yet staunch and firm against the pull of the powerful shoulders. Built so strong and durable that one Scotch Knocker will outlast *two* ordinary collars.

These collars come in different styles. Some are cloth faced but all are built of real 7-oz. *bark-tanned leather.* They are stuffed with hand-failed, long rye straw. Faced with soft, elastic sweat and rain proof hulls. Point of greatest strain triple reinforced. Write for free book.

on flesh. As they mature early they can be sold to market at ten to twelve weeks of age and will bring the highest possible market price at this age. The pullets are ready to lay at five months and very often sooner.

To you who are thinking very seriously of making a start in the poultry business or to the farmers who have awakened to the advantages of thoroughbred stock over mongrels, let me repeat, by all means pick out the breed that suits your needs, look up some good, reliable specialty breeder of the breed you have chosen, write him asking for prices on stock or eggs, but by all means do not describe a Chicago winner and then expect the breeder to sell you birds of that class for $2 or $3. In making your start get nothing but full blood stock and do not allow this original stock to become crossed with any other breed in any way. Start with a good strain and keep it pure and remember the "old saying" that the very best is the cheapest in the end. Ero. G. Nelson.

Walworth Co., Wisconsin.

Paving the Way For Winter Eggs.

Importance of "Time of Hatching" Cannot Be Overemphasized in Winter Egg Production—By W. G. Smith.

IF WE could only establish within our minds the fact that the success or failure to get eggs when eggs are high and to have hens laying when the snows of next winter come is very much dependent upon the hatching season that is at hand we would have less failure. The breeding pen, the time chicks are hatched and the care that is given them during the period from the time they hatch until they mature all are of the most vital importance in securing winter eggs. Given well-matured pullets when frost comes the matter of winter eggs is not a difficult problem. It is simply a matter of care and feeding providing your pullets come from a laying strain, but with small, immature pullets when the cold weather sets in winter eggs are next to an impossibility. Such pullets will seldom, if ever, lay before the middle of January and very likely not until a month later. So if we are to have winter eggs we must begin in the spring to prepare for them—as a matter of fact, we should begin with the breeders from which we shall hatch eggs this spring.

June and July pullets are not winter egg producers except occasionally in the smaller varieties. The larger ones from the Wyandotte and Red upward should be hatched in April and May with a hatch in March if eggs can be secured and one has a place where chicks may be safely kept during the squally days that often come before Easter. We have always found that these early hatches pay the best dividends. We have had pullets that began to lay in November and continued throughout the winter that were hatched in March. We brought off a hatch of thirty Orpington pullets the last day of February a few years ago. These pullets began to lay in September and continued until Christmas, when they began to let up. A few molted, but the majority of them went back to the laying job in a short time and continued until they became broody in the spring. Such hatches cannot be made the rule and this one was made in the nature of an experiment. It proved successful, for the pullets furnished us with eggs while the old hens were molting and eggs were high at that time. They also proved to be good breeders and eggs hatched well from them, which seems to refute the argument that hatching eggs should not be kept from heavy winter layers.

I am of the opinion that winter laying will not hurt the breeders as long as they have not been forced for eggs. If they have not been fed stimulants and their natural inclination has been to lay I have found no reason to refrain from using the eggs in the incubator. However, where forcing feeds and stimulating condiments have been fed in the hope of boosting the winter egg yield results will probably be disappointing, for the vitality of the fowls has been lowered. This thing of forcing for eggs is a poor practice in my mind and where pullets have been properly hatched and properly reared is unnecessary. It is but a makeshift at best and any results which may be had are only temporary and very often harmful. Big, strong, vigorous hens and cockerels with plenty of snap and vitality, no matter what the breed, make the best breeders. From such fowls we seldom hatch puny chicks unless something has happened during incubation to cause puny chicks. From such breeders we can hatch pullets that will be strong enough to stand the natural strain of egg laying and whose worth in the laying pens will be marked. If we can choose hens with good egg records and cockerels from egg-producing dams so much the better, but even strong, healthy breeders without regard to their egg-laying propensities make the start easier and success a little more certain. Then while choosing eggs for incubation it is a good plan to pick eggs of a uniform size—rather large ones preferred. Sometime we may be selling eggs by weight instead of at so much per dozen and the forehanded man will be on the safe side by producing a strain that will in turn produce large eggs. Of course, there is a limit to size and no abnormally large eggs should be incubated, but the average may be safely raised.

Chick rearing is the test of the poultryman's efficiency. Few people need expert advice on hatching chicks, but in rearing them even the experts need advice. That is one reason why we prefer hens to artificial brooders and try to set several hens timed to hatch with the incubator. We give all of the chicks to the hens if possible and find this method of rearing very good. However, it is not always practicable to do this and when we use heated brooders we aim to have plenty of ventilation and room in them. We keep an extra brooder for the sole purpose of dividing up the flock after it is a week or so old, for chicks take up space rapidly in a short time. I believe one of the stove-heated colony brooders would be a paying investment on any farm where considerable numbers of chicks are artificially hatched, as their capacity is very pliable and there is less danger of overcrowding and poor ventilation. As the rearing of these chicks has the utmost importance in the future poultry profits it pays to exercise care.

After chicks are five or six weeks old food should not be stinted. They are growing and need plenty of feed. We have fed from open hoppers with excellent results and find that the chicks are more contented and easier handled where food is constantly before them. Stunted chicks mean pullets that will not come to maturity properly and small chance for winter egs. It means little or no profit in the surplus that goes to the butcher or to the huxter. On the other hand, big, strong, well-fed chicks make a path for themselves from the brooder to the egg basket. Cockerels that have had good care and attain size early are attractive as breeders and sell easier. Even if they are of mixed varieties and of no value as breeders they bring more money on the butcher's block.

Stands Up For the Cat.

To the Editor:—In your issue of January 4th you had an article, entitled, "Cats Destroy Too Many Birds." The writer of this article, I think, has never had very much experience on a farm. There undoubtedly are many cats which should be killed, as they do too much harm to birds, but if we should kill all the cats, as he seems to think should be done, we would soon find that rats and other vermin would get so plentiful that they would do a lot of damage. The common timber squirrel does much more damage to small birds than cats do, as one squirrel destroys more small birds and eggs than twenty house cats. This we know from experience, because when first the squirrel came in here we thought they were so cute we did not want to kill them, but in a few years there were hardly any small birds. The last two years we have been shooting the squirrels during the winter, and we never had so many small birds as we have had the last two summers.

Each farm needs three to five good cats and the rats will be so few that there will be little damage done by them. I do not think that the common house cat be termed as worthless, that is as a class. Subscriber.

Careful Mating Is Important

To the Editor:—As the season is now at hand to properly mate and pen your birds for the coming year, I believe these topics are of sufficient importance to demand the attention and consideration of all of us. As to proper mating you should select some of your best males, paying close attention to shape, color, etc. The females should also receive the same

Want to buy or sell a farm? Make it known by inserting an advertisement in THE FARMERS' MARKET Six cents a word each insertion.

No Money In Advance

Just to prove to you that these are the grandest shoes any farmer or working man ever put on his feet, we will send you a pair of Hy-D-Rubber-Wood Sole Shoes without one cent in advance! When you see the shoes, feel the texture of the thick, tough, yet wonderfully soft and pliable leather. If you think it the biggest shoe bargain you ever saw, simply pay the price upon arrival—$3.95 for Style X, or $4.50 for the 10-inch top Style Y—and keep the shoes. Otherwise, return them at our expense.

MANURE AND WATER-PROOF

Outwear six pair of shoes. And can't leak! The sole is made of special rubber, mixed with Sea Island cotton canvas and hardened under a ton of pressure, almost to the toughness of armor plate. Then there is a thick inner sole of non-conducting selected kiln-dried wood which is the most comfortable substance in the world to walk on. Practically no wear out to these soles. Uppers are of best old-fashioned oak-bark-tanned AA grain leather—thick and tough as whang but soft, flexible and absolutely water-proof. Uppers are attached to the sole by a special, patented process which positively won't let a drop of water through. And the acids of manure soil and in the milk on creamery floors which quickly rot out rubber boots and ordinary leather shoes, simply can't touch these shoes. Comfortable as a pair of felt slippers from the minute you put them on. Fine looking, too—not heavy, awkward and clumsy like ordinary work shoes. Wear them indoors as well as out. Soles are sound-proof and do not mark floors. And wear? They wear like iron. They will easily give you

Style X
Price, $3.95

$12.00 Worth of Shoe Wear For Only $3.95

What with the leather work shoes, rubber boots and overshoes you ordinarily buy, and cost of repairs, the bill easily amounts to $12.00 a year. Probably more. And one pair of these Hy-D-Rubber-Wood Sole Shoes at $3.95—the 10-inch high tops are $4.50—will give you more wear and comfort than all the footwear you have been buying. Wear a pair for a year and see.

This One Style Comprises Our Entire Factory Output

That's how we keep cost of production down to the lowest notch and maintain a uniform standard of quality. By selling the entire output of our factory direct to the men and boys who wear our shoes we save and give you all jobbers' and retail shoe dealers' profits. A dealer would ask you anywhere from $6 to $8 for shoes like these if he could get them to sell. You pay us only what it costs to make them plus one small profit.

Style Y
Price, $4.50

SPECIAL NOTICE The demand is so big that we are behind in some sizes. Sizes 7, 8, 9 and 10 we can ship at once. Other sizes within two weeks.

A Snap for Agents Sell our shoes to farmers and working men. Shoes sell on sight. No capital or experience necessary. Write for particulars.

Mail Coupon Today Send no money. If not all you expect return at our expense. If you must have more information write for free booklet.

At Home In Any Soil—And Behind Any Tractor

"I HAVE been using the Janesville horse plow for many years. Have just bought a tractor and want to get the same auger twist mouldboard in a tractor plow. Can I get it?" Hundreds of such letters have poured into our office. Our answer has been, "Yes, you can get it, and here it is."

The N[illegible] [illegible]perience

[illegible] demand the first day [illegible]mous JANESVILLE [illegible]r Twist mouldboards [illegible] F. D. 2 says, "It's like [illegible] furrows curl over just like they did [illegible] anywhere as well as in my best field and without [illegible]. Plowed 60 acres this fall for 28 cents an acre."

The Janesville frame gets the greatest efficiency out of the plow bottoms. The frame is flexible and plows are hung so as to allow a "floating" movement through the soil. It's the same construction that owners say "pulls a horse lighter" behind the team. It insures getting the most out of your power in a tractor. And the furrows curl in an easy flow at any speed.

This is the only tractor plow we know of that can be set to turn 12, 13 or 14 inch furrows without changing plow bottoms. We make it with two or three bottoms. Two bottom plow makes a three bottom outfit by adding a third bottom and beam. All bottoms are interchangeable on any beam. Removed or replaced quickly. Power lift operated by a rope.

More and Better Corn

Moline Four-Wheel Planter
has gained the favor of farmers throughout the corn belt, because it always increases the yield per acre where other conditions are right.

Has a reliable drop—no bunching or scattering.

Deposits every kernel at uniform depth. Four wheels cover the seed evenly and pack the moist earth around it leaving the top of the ridge open and loose to insure quick germination.

Operator has clear view of the work at all times.

THE MOLINE LINE INCLUDES
Corn Planters, Cotton Planters, Cultivators, Corn Binders, Grain Binders, Grain Drills, Harrows, Hay Loaders, Hay Rakes, Lime Sowers, Listers, Manure Spreaders, Mowers, Plows (chilled and steel), Reapers, Scales, Seeders, Stalk Cutters, Tractors, Farm Trucks, Vehicles, Wagons.

Flying Dutchman Planter
has a record of planting 3550 perfect hills to the acre. Plants corn to suit your soil—2, 3 or 4 kernels to a hill and with unvarying accuracy—change the drop while the machine is in motion. Plates for edge drop, flat drop or drill are supplied with each machine. Every machine must stand a rigid test for accuracy and efficiency before it leaves the factory.

Ask your Moline dealer about these corn planters or write us for illustrated literature.

A ROLLER FEED MILL

WILL GRIND A WAGON LOAD OF FEED FOR 10 CENTS.

THIS is the **Famous Howell Roller Mill** you have heard so much talk about. The new improved mill for the scientific grinding of grain. Old style Burr and Stone Mills are out of date. Thousands of them are being annually replaced by the Famous Howell Roller Mills. Grind twice as fast as the best burr mill made. Does not heat the feed. Grinds Graham and Rye flour as well as feed. Has big capacity. Requires little power. No burrs or stones to wear out. Guaranteed to last a life time. Made in 13 sizes suitable for any size engine. Save one-half your time, gasolene and money by using a Howell Roller Mill. Write for Catalog F-16. We will send it free, together with the **Famous Howell Roller Feed Mill Puzzle.**

R. R. HOWELL & CO., Manufacturers, Minneapolis, Minn.

consideration. However, the male is really the most important part of the mating pen. Look the birds over very carefully and what the male lacks in good points should be furnished by the female if you have the right birds. If this close attention is given to mating then it will not be long until the flock is built up to a bunch of nice fowls, most of them good enough to be taken to your poultry show. Of course, even though you have these points in view in mating, it is well to have a good foundation stock to begin with. To get this you will have to make purchases from good, reliable breeders. If you do this and take good care of your flock and of the coops, barns, runs, etc., you will surely succeed. In the mating pens I have the best results by taking eight or ten old hens and using them with a vigorous cockerel. My experience proves this to be the best way. I hope my friends will see fit to carry out some of these ideas and that they will meet with success. W. F. Gernetzky.

Portage Co., Wisconsin.

Hens Lay All Winter.

To the Editor:—I wonder how many of the readers are getting eggs this winter? I believe we can get eggs in winter if our chickens have the proper care, for I have been getting eggs all winter with the mercury sometimes down to twenty below. I feed wheat and oats in the morning, making them scratch in the straw for it. Then I feed corn about three o'clock. I always keep plenty of oyster shell for them as well as a box of bran and tankage, about four parts bran to one of tankage, set before them at all times. The box is arranged with cross wires, so they can stick their heads through and not get in the box. They should have plenty of fresh water. I use a poultry tonic to keep them healthy, and I give it to the baby chicks once each day in a mash for four weeks, then about three times a week to all chickens.

We have a large scratching pen with muslin over the south side, giving them light and protecting them from the wind. Everyone should have a scratching pen for their chickens, so they can have plenty of clean straw and exercise for their feed.

I have a cross between Rhode Island Red hen and Brown Leghorn single-comb cockerel. One pullet laid her first egg a few days before she was four months old, and several wanted to sit when they were six months old I have forty-one pullets and twelve old hens, but it is the pullets that are doing most of the laying. I am getting from fourteen to twenty-two eggs per day. Last spring my young chickens weighed one and three-quarters pounds in seven weeks.

Mrs. George A. Kyle.

Packing Eggs for Incubator.

To the Editor:—The lady who wanted to know how to pack large eggs for incubation should go to her storekeeper and get one of the corrugated boxes about twelve or fourteen inches long and ten or twelve inches wide, although it makes but little difference in regard to an inch or two longer or wider, as she can make her fillers to correspond. Some of these boxes may be twenty inches or more in height, but that will make no difference, as they can be cut down to the required height when the eggs are packed.

I make my fillers by taking an old corrugated box and cutting pieces about two inches wide and the length of the box, and others to equal the width of the same. I then cut notches in each piece as far apart as the size of the egg calls for, and fit these notches into each other. In fact, I make the fillers on the same principle as those in shipping cases, only I use heavier paper.

I then place a layer of excelsior in the bottom, then a filler, and fill each space with an egg wrapped in excelsior. After filling the spaces in the first layer, I put on the cover for that layer and start another, continuing until I have the number of eggs I wish in the box.

When preparing the box, cut down the ends to the level you intend to fill, but leave the sides, so that they may be bent over, forming a strong cover to place over the excelsior, which is placed above the last layer. Then take a stout cord, such as is bound around newspaper bundles; or, if you cannot secure that, use binding twine, and wrap the box securely. I make a rope handle, so that the box can be handled like a suitcase. I never have had an egg broken in shipping. I use the same sort of boxes, only smaller ones, for fewer eggs, and they have always arrived at their destination in good shape. In fact, you can take the regular shipping as your guide and make one to suit yourself in regard to size of egg.

Jas. Lawrey.

Packing Eggs For Shipping

To the Editor:—Someone asked for directions for packing hatching eggs for shipping. I have shipped hundreds during the last two years, and when I shipped in market baskets by express, no complaints came in. Once I shipped 100 in an orange box and the box was mashed in on one side en route. That was the railroad company's fault and they should have stood for the loss, but I made it good myself, and after that I always shipped in baskets.

For 100 hen eggs I take two common 5-cent market baskets. Get them filled with excelsior at the drug store—they are glad to get rid of it, as they only burn it anyway. I sometimes get them to save it for me. I use a thick pad of the excelsior in the bottom of the basket, then make a little nest for each egg, so they will not touch, or wrap each egg in paper before settling in the nest, small end down. Over these I put another thick layer of excelsior, then another layer of eggs, and a thick pad of excelsior on top. A muslin cover labeled, "Eggs for hatching—handle carefully," is sewed all around the wooden band on the basket with corn. It is addressed below the label and sent on its journey, and I never have had a complaint come in. A few can be sent by parcel post in the same way, but express is the safest. Mrs. J. H. M.

POULTRY AND PET STOCK.

2949 COCKERELS, hens and pullets. 49 varieties chickens, geese and ducks. Eggs in season. Aye Bros., Blair, Neb., Box 1. Free book.

SOME extra large, choice, heavy-boned Mammoth Bronze turkey toms and hens. Stock for sale, prices reasonable. O. C. Olson, R. 2, Strum, Wis.

WHITE and Barred Rocks from prize-winning stock. Yearling hens and males. Early pullets and cockerels. Mrs. J. F. Bloom, R. 1, Stillwater, Minn.

FIFTY varieties chickens, ducks, geese, turkeys guineas. Low prices to make room. Catalog free. Dell Walrath, Box S, Janesville, Minn.

In and Around Wisconsin

COMING EVENTS.

Sixth Annual Road School, Madison, January 29th to February 3d.

Farmers' Week (Swine Program), Madison, Wis. Beginning February 6, 1917.

The annual meeting of the Washington County Agricultural Society was held recently and officers elected as follows: President, C. A. Schroeder; vice president, John Jansen; secretary, Joseph H. Huber; treasurer, Louis Kuelthau. The society has a balance in the treasury of $841.91.

On January 17, 1866, Mrs. C. C. Fisk, of St. Croix Falls, bought a bill of goods at the store as follows:

One fine comb	$ .30
Seven yards sheeting	1.75
Two pounds green tea	4.40
One sack fine salt	.35
Three pounds plug tobacco	3.00
One barrel flour	9.50
Two boxes matches	.30
One hundred pounds sugar	15.00
Six tin plates	.75
One lamp wick	.10
One-half pound cinnamon	.75

Those of our readers who are worried about the high cost of living today had better give these figures a little study. Our grandfathers and grandmothers lived and thrived on these prices, so let's take heart.

A recent report of the Geneva Cow-Testing Association, in Walworth county, shows that a Jersey led the list for butter fat production in November last, a Holstein was second and a Guernsey third. This is distributing the honors and indicates that each of the breeds probably has its enthusiastic supporters in this section. Of the cows which produced forty pounds of fat or better for the month, the Holstein breed furnished twelve, the Guernsey breed five, and the Jerseys three. It is also interesting to note that four out of the first five heading the list are registered stock—two Jerseys, two Holsteins and one, the only grade animals of the five, a Guernsey.

The most modern, up-to-date hog house in Wisconsin. Where the Gant Farms' Duroc Jerseys are raised. On February 15th J. D. Gant, proprietor, will sell forty head of bred sows at his farm, Delavan, Wisconsin.

The Fond du Lac County Holstein Breeders' Association, at a recent meeting, decided to hold its annual sale at the fair ground, April 26th and 27th. This sale promises to come up with the big live stock events of the state next spring. The officers of this association are S. H. Bird, president; S. C. Stanchfield, vice president; C. M. Corcoran, treasurer; C. H. Brugger, secretary, and Messrs. W. J. Gillett, S. M. Randall, and F. J. Bristol, with the other officers, are the board of directors. The sale in April will include about 150 head of pure-bred stock, according to reports. The breeders of Fond du Lac county are discussing the question of erecting a sales pavilion to accommodate the increasing sales business of the county. The Guernsey breeders of the county and the Jersey breeders are also interested in the proposed sales pavilion. The representatives of these three breeds will hold a meeting with the Wisconsin Experiment Association and the Farm Contest organization some time in February. The Fond du Lac Guernsey Breeders' Association is one of the big associations of the state and has a membership in six counties.

FARMERS' PACKING AND PROVISION PLANT, FARIBAULT, MINNESOTA.

The following table gives the land values per acre in Wisconsin counties, 1906, 1911 and 1916, as reported by the tax commission. These figures are based on the reports of assessors and also on reports of actual land sales, and they are believed to be fairly accurate. It is apparent that land values, as a whole in the state, have almost doubled in the past ten years. The greatest increase has been in some of the newer counties, but the increase in the older counties is also large. The tax commission gives out the figures as follows:

County	1906	1911	1916
Adams	$ 13.78	$ 17.24	$ 22.[illegible]8
Ashland	10.63	13.01	20.21

Radiator heating makes farm life ideal

The people who heat their homes with IDEAL Boilers and AMERICAN Radiators prove to themselves and to their friends, that winter in the country can be made most comfortable, enjoyable and profitable.

AMERICAN RADIATORS & IDEAL BOILERS

***You* can have complete comfort in *your* own home, whether it is an *old* or *new* building.**

A basement or cellar is not necessary, as the IDEAL Boiler can be put in side room or lean-to.

It is not necessary to have running water—the IDEAL Boiler uses the same water over and over for years, and the small loss from evaporation is easily refilled with a bucket.

IDEAL Boiler fuel pots mix the air and coal gases as in a modern gas mantle, extracting ALL the heat from the fuel.

Easily put in even in mid-winter without tearing up or disturbing present heating arrangements until ready to put fire in the IDEAL Boiler.

It is not necessary to have special kinds of fuel—IDEAL Boilers will burn almost anything, wood, lignite, screening, slack, soft coal, etc., and best of all—***It is not necessary*** to have a mint of money before you can purchase an IDEAL Boiler and AMERICAN Radiators for your building!

A No. 5-19-W IDEAL Boiler and 450 ft. of 38-in. AMERICAN Radiators, costing the owner $200, were used to heat this farm house. At this price the goods can be bought of any reputable, competent Fitter. This did not include cost of labor, pipe, valves, freight, etc., which vary according to climatic and other conditions.

Send for book "Ideal Heating" (free)

We want you to know why an IDEAL heating outfit will give you most heat at least cost, and why it is the best for years of daily service without repairs or attention. Write today for our free book. You ought to read it.

Faultless Stump Puller

At a Special Low Price

The Faultless actually pulls from 50 to 100 percent more stumps at less cost of time and labor than any other stump puller. The cable winds onto the drum at the bottom all the time and the idle coils slide toward the top. This keeps the pull down and in a direct line with the anchor, and increases power. The machine cannot tip. Drum accommodates all of the cable, and it goes on only one layer deep. This prevents wear and relieves the strain on team and machine.

Machine and Cable are Guaranteed

against breakage for one year. Machines in use 15 years and longer are still in service.

Pull Stumps for 10 Days---Free

Clear from 10 to 50 acres. If not then satisfied that the Faultless Stump Puller will do more than we claim, return it to us at our expense.

The superiority of the Faultless is recognized by hundreds of farmers and railroads. It received highest awards at both the World's Fair at St. Louis and the Lewis & Clark Exposition at Portland in competitive demonstrations.

Write for special low price on our complete outfit, and our free book on clearing stump land.

Faultless Stump Puller Company, Dept. W, Cresco, Iowa.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

Questions and Answers.

Recharging a Wet Battery.

Please state the ingredients used to recharge a wet battery. How much of each should be used, and how much would be the cost?

Answer.—There are many kinds and sizes of wet batteries, each requiring different materials for recharging, the amount of the materials depending on the size of the cells. Zinc is usually used for one of the poles. When carbon is used for [illegible], the [illegible] of sal am- [illegible]y, or [illegible] double- [illegible] zinc [illegible] sulphate solution is usually used. See your druggist for prices on battery materials, as these prices are changing rapidly.

Underground Wires.

Is it all right to pass current from one building to another through lead-covered cables, in that way doing away with overhead wires? How much and how strong a current can be safely sent through a six-strand Packard low tension cable? I would like to use this cable between walls to supply an overhead lighting plan of several lights.

Answer.—It is all right to transmit current from one building to another underground, using lead-encased cable or enclosing the wires in metal conduit. The wires must be protected from moisture. The cable you mention would be safe for 110 volts, eight amperes. You should not use this cable for wiring your house, however. Use "new code" rubber-covered wire of the size specified by the Underwriters' Rules for the amount of current you wish to transmit. Otherwise the insurance on your house might be void in case of a fire.

Car Hard to Start.

We have a Model 83 B Overland car. It starts hard, but runs nicely after starting. All the factory expert could find wrong with the car was a water leak into the cylinders. He stopped this, and put in new spark plugs; this helped some, but we still have trouble in starting. The car is new and has a good spark. What do you think is the trouble? The car has a "Dixie" high-tension magneto.

Answer.—The trouble is probably not in the magneto. However, you might write to the manufacturers of the magneto and inquire if it would be possible to apply their starter coupling to your machine. This coupling enables the magneto to deliver a very hot spark at starting, and doubtless would improve the starting qualities of your car. It is possible that the expert failed to stop the water leak entirely. This would make the motor hard to start. The fact that your motor starts better when primed shows that the starting mixture is too lean. Therefore, it would be well for you to choke the air supply when starting, either by holding the hand over the air inlet, or by closing the air inlet by means of a butterfly valve.

A Five-Horse Evener For a Gang Plow.

Please publish an illustration showing how to make a five-horse evener for a gang plow, so that four horses will walk on the unplowed ground and one in the furrow. Also give the measurements in inches. I have most of the materials for making one, but do not know just how.

Answer.—The illustration shows such an evener. Ordinary 28-inch singletrees are used. The doubletrees D should be made of hickory, 2x4x42 inches, the clevis pin holes being located five inches from each end. The tripletree T should be made of hickory, 2x4½x58 inches, the end holes being located five inches from each end and the middle hole sixteen inches from one of the end holes. U is a piece of ½x2-inch strap iron, bent U shape, to retain the doubletree pin and prevent the doubletree from tilting. A

block about one inch thick must be placed between T and the doubletree, so that the clevis pin will clear the middle strap. R is made of hickory, 2x5½x90 inches. The end holes are located five inches from each end, and the other hole 32 inches from the end hole. A represents two pieces of strap iron or boiler plate six inches wide and twelve inches long. One piece is above; the other below the plow clevis. Two iron straps, S—one above and the other below R—are enclosed between the plates, and are free to turn about a five-eighths-inch machine bolt through the plates. Another bolt through the plates supports one end of the strap L, the other being loosely bolted to the bracket, B, on the end of R. The straps may be made of ½x2-inch iron or steel. T must be cut away at the end, so as not to interfere with S.

Play in Steering Gear.

How can I take up the play of the steering wheel of a 1916 model Saxon Six?

Answer.—The ball arm may be loose on the gear shaft. This is located just outside the frame under the gear shield. The lost motion can be taken up by tightening the clamp on the upper end of the ball arm. There might be end play in the steering post. This can be taken up by loosening the clamp bolt that holds the column in place on the instrument board and tightening the large hexagon nut on the steering column just above the gear case. If the above adjustments do not remedy the trouble, take up the play between the steering gear and worm. To do this, tighten the gear case cover on the right hand side of the case. Loosen the set screw that holds the case in position and turn the case to the right. Do not turn it far enough to make the steering stiff. It is well to jack up the front wheels while making the adjustments.

Pull Out Stumps With the Famous Hercules!

Triple-Power

Pull an acre or more of stumps a day. Pull any stump in 5 minutes or less. Don't have loafer land when it's so easy and cheap to *pull the stumps out!* Make 1000% profit by using the Hercules. $1281.00 the *first year* on 40 acres! $750.00 every year after. Let us *prove* it.

Low Price and Book Free!

Get the facts. Read our book. Tells what all steel, triple power means. Shows many features of the Hercules. Shows many photos and letters from owners. Postal will do.

HERCULES MFG. COMPANY
159 25th St. Centerville, Iowa

Pull Big Stumps by hand

Clear your stump land cheaply—no digging, no expense for teams and powder. One man with a K can rip out any stump that can be pulled with the best inch steel cable. Works by leverage—same principle as a jack. 100 pounds pull on the lever gives a 48-ton pull on the stump. Made of Krupp steel—guaranteed against breakage. Endorsed by U. S. Government experts.

Fruit and Garden

Horseradish Facts.

Did you know that the horseradish industry is assuming respectable proportions in these United States? It really is. The statistics gathered only notice plantations of one acre or more and they foot up to 1,500 acres. If the smaller patches were included in the reckoning it would probably be double that acreage. Horseradish occupies a unique position among soil productions. It is neither a luxury or a necessity, yet it is an appetizing condiment in great demand in the spring of the year. The human system seems to call for it during the change from a winter to a summer diet.

Ground fine and mixed with vinegar, with a little salt and sugar added, it makes a very acceptable garnish for bacon or beefsteak and is welcomed by many as a relish on mashed potato or bread and butter. The peculiar smart-bitter of this root is not found in any other table preparation.

The culture of the root is as easy, to use a familiar simile, "as falling off a log." It is entirely hardy and when once established it will stay by forever.

The usual practice with farmers is to set it in any out-of-the-way place and give it no attention, no culture whatever, except to dig out a few roots as needed. But this is not the way to grow it commercially. It responds to proper care and reasonable culture as well as any other crop.

Select rich and clean land and plow it deeply. It will thrive upon almost all kinds of soil, but we would give the preference to a moist, well-drained loam. Mark off as for corn, with rows four feet apart. Every root or piece of root will develop buds and make a plant, but it is better to select roots of one size, and a root six inches in length is better than a shorter piece. Each piece planted will throw out a bunch of smaller roots at the lower end and these roots will take two or three years to develop size enough to be workable. But the six-inch root planted will be large enough after one good growing season if given proper culture.

It is exactly like any other crop—good soil and good culture pays. The expert horseradish grower gets a good crop the first season. He plants in April and digs in the next November. But even if you prefer to harvest at the end of the second season good care pays, for it results in an increased output.

Many growers are not manufacturers; they do not prepare it for the table, but sell it to those who do so. It is sold by the pound and 3 to 5 cents is considered a good price. Crops are often harvested which give a gross return of $300 to $500 per acre.

After the first digging there will usually be enough roots left to produce a fair second crop, perhaps even a third. But the experienced grower usually prefers to plant each year.

Some growers combine with this the business of selling the prepared article. Indeed, they go together very well, for the winter season is utilized in the preparation.

About all the machinery needed is a proper grinder, which is cheaply made or bought. Bottles or glasses are bought at wholesale and then with a neat printed label you are ready for the market. If one is careful to give a good article and good measure a profitable business is soon established.

While the profits will not be very large, they are sure. And there are but few business enterprises which can be started upon such small capital and with so little risk of failure. In fact, there is no crop so sure to grow, and any person who is gifted with the least ability as a salesman can dispose of his output.

When once your reputation is established and your brand known to consumers your business will gradually extend and may be increased to the limit of your capacity.

Ambitious boys who are willing to work can find in horseradish a way to get a start in the world.

Grow Gladiolus.

If you ask what one flower, adapted to general culture, can be grown with the least expense and the most satisfaction, the prompt answer would be "The gladiolus."

And that means the modern form of this flower, and not the old-fashioned "sword lily" of our grandmother's day. No other flower has been so vastly improved in the last fifty years. In size, in color, in shape, it has progressed beyond all expectation. Its peculiar value is found in the fact that, while in the above particulars it satisfies all tastes, it excels all other blooms, in its lasting quality, as a cut flower.

Almost any shade or combination of colors may be found, and a succession of bloom may be secured by planting early and late varieties. The time required for reaching maturity varies from seventy-five to 120 days, and the season for cut flowers may be much extended by judicious planting.

Any soil, so it be well drained, will grow this flower, but perhaps it has its best development in a rich, friable loam. Do not make the mistake of planting it under trees or in sod. Like all sturdy plants, it is a child of the sun, and it cannot have too much sun if the soil is tilled and watered.

The varieties vary in growth—size at maturity, from two to four feet. When this flower is to be grown in quantities the best way of planting is in rows two feet apart, and the bulbs set from three to six inches apart, according to the size of bulbs. The depth of planting also depends upon the size of bulbs—from three to five inches.

Amateurs often ask what varieties are best? A hard question to answer, because tastes differ. But suppose you have decided to send an order for 100 bulbs; we can easily indicate what would suit us: Twenty of the pink, variegated, with America for leader; twenty of red, variegated, with Mrs. F. King as leader; twenty of yellow, variegated, with Golden King as leader; twenty of the white, variegated, with Chicago for leader; twenty of the blues, browns and blacks—florists' choice.

With such an order as that you will get all possible colors and mixtures of color, and after growing one year you can tell for yourself which please you best. Some you will perhaps find unattractive, and can cut them out at next planting. But the marvelous markings of the reds, pinks and whites will certainly please you.

As to using this flower you will make no mistake if you cut them when the first bud on the stalk begins to open. Do not, in your anxiety for long stems, cut all the leaves from the plant. They should be left to properly ripen the bulbs. Take the flowers to the house and place in water. They will open better and last longer than if left out in the sun. Every forty-eight hours give fresh water and cut off the lower half inch of the stalk. As soon as the individual blooms wither, remove them from the spike. They will continue to flourish until the last bud opens. If you wish to send to your friends, no flower ships so well. Just pack in a box with damp moss about the stems.

When once started in gladiolus growing you will become an enthusiast, and may maintain your plantation and increase it each year without buying more bulbs, for there will be

Three Reliable Brands NORTHRUP, KING & CO.'S SEEDS

A MERCHANT in North Dakota advertised last spring that he had sold our seeds for 18 years without a complaint. He is only one of thousands who have been selling our seeds for 15 to 30 years. They and their progressive customers know that Northrup, King & Co.'s Seeds give satisfactory results.

It is support of this kind based on *satisfaction* that accounts for our rapidly growing business and for the increasing popularity of the brands shown above.

These Brands stand for integrity, high quality and reliability. When you buy seed look for the STERLING TRADE MARK, the NORTHLAND GOOSE or the VIKING SHIP on the bag.

Northrup, King & Co.'s seeds are sold by dealers in nearly every community of the Northwest. Your merchant can get for you quickly any of our seeds which he may not have in stock, from one packet to a carload.

a natural increase. Big bulbs, after first frosts, dry out and store in paper sacks, in a dry, warm cellar. There are thousands of farmers' wives who need the ministry of this beautiful flower, and if it is once enjoyed, they will never do without it again. Try a hundred in the coming spring. Five dollars will buy them—pure pleasure and highest enjoyment at a low rate.

Evergreens Contribute to Childhood's Happy Hours.

To the Editor:—I was born and raised right by a big Evergreen forest. Whenever I hear the whispering sound of an Evergreen it sends my memory back to childhood days. I grew up among the trees and learned the names of all the different birds and could tell their names by their songs. I learned their different methods of building and hiding their nests in the Evergreens. I have seen many a hare, fox and deer seek protection of the Evergreens to avoid hunter and hounds.

Then, we boys were safe from the forest master's cane when we got to the Evergreens.

Evergreens grow in the swamp as well as on the stony mountain where no other tree would grow. Where there is an Evergreen there will surely be a bird's nest, and where there is bird life a person will never be lonesome. Let us teach the children to connect the Evergreen with the Saviour tree, the Christmas tree. I think the Evergreen is one of the most splendid trees in existence.

McHenry Co., Ill. R. M. Omann.

Honey Bees Not to Blame.

To the Editor:—I read an article in your paper entitled "Fruit Growers vs. Beekeepers." I raise fruit and keep bees. I used to think the honey bee was the rascal that punctured and caused my grapes to burst open. Last year I had fifty stands in the heart of my vineyard—3,000,000 bees. When my grapes got good and ripe it set into raining on and off for three days. The grapes began to burst open fearfully and not a bee molesting them.

Eight and nine days later the bees began to show up and work on the grapes. The plums burst open on the plum trees so badly that I lost the sale of plums and no bees around. The bean pods began to burst open, covering the ground with beans, and no bees working on them.

I am positive now that the bee will have to be armed with a pegging awl and rip saw before it can do any damage to my grapes. The bee is the best pollinizer for fruit, and the only insect we have to gather the nectar from the flowers and give us that delicious honey which is the best sweet on earth for the human family.

If a bee lights on your ear or nose, let it roost there a few minutes and it will leave you unharmed. If a bee crawls up your shirt sleeve let it out gently. If you are rough about it and the bee stings you, good for you, you deserve it.

I have kept my apiary in my grape vineyard fifteen years and have had an abundance of grapes, plums, apples, cherries, pears, peaches, strawberries, currants, etc. I lay all the blame to the honest honey bee pollinizing the flowers. The bursting open of the grapes, plums and bean pods was caused by the rains and hot weather striking these fruits at the same time when they were ripe.

Chas. R. Riley.

Canadian Field Peas as a Hog Feed.

A few enterprising farmers in North Dakota have found that the Canadian field pea grown as a hog feed is an immensely profitable crop in some parts of the state. Usually the Canadian field pea does not make a satisfactory growth in the heavy soil of the Red River valley, but in most of the soils in the central and western part of the state the Canadian field pea will make a very heavy growth. It may be seeded alone at the rate of two bushels per acre and pastured by hogs when partly grown or it may be allowed to mature and be used as a fattening ration either by allowing the hogs to harvest the crop themselves or by threshing the crop and feeding the peas as part of the grain ration. Usually the crop proves a trifle more successful when one bushel of oats per acre is seeded with the two bushels of peas. The oats will help to support the pea vines and the crop can then be harvested better, either by the hogs or with a binder. If the crop is to be pastured through the summer months grain should be fed

to the pigs in addition. A field of peas seeded beside a patch of corn that is to be hogged off will add considerable to the ration while the hogs are on the corn. One of the objections to the use of peas as a forage for hogs has been the high price of the seed. It is, therefore, advisable to grow some seed each year rather than to depend upon buying it.—[W. H. Peters, North Dakota Experiment Station.

Watering House Plants.

One of our subscribers writes:

What is the matter with my house plants? They are not thrifty as I could wish. I have been told not to overwater them and I am very careful, but I don't get many flowers and many of the lower leaves turn yellow. My sword fern has not sent up a new leaf for two months.

We greatly fear that you are killing your plants with kindness. Your case is like that of the young mother who was so excessively cautioned not to overfeed the baby that she starved it to death. When friends give you advice about the care of your plants you had better, before you follow their advice, be sure that they are competent to give it.

If you have no insects in your window garden and the other conditions of light, heat and good soil are right, your plants must be suffering from drouth. The amount of water needed depends upon your room, its temperature and the amount of sunlight, for these things determine the rate of evaporation.

You do not state method of watering, but a common and mistaken way is to turn on a few spoonfuls of water daily. Give up that system. Fill with warm water a pail or big pan and set your flower pots in it. It should be full enough, so as to cover the pot and thoroughly saturate the earth and roots. Let it stand for twenty minutes, then take it out and put in another one or two, according to the size of the pots and the water receptacle. Do this once a week and they will need no intermediate watering. There is much talk about ferns being overwatered, but our observation is that they suffer from lack of water as often as from too much. A lady friend of the writer's, who is very successful with ferns, gives water abundantly once a week.

Another thing to notice for success with plants is to have the size of the pots correspond to the needs of the individual plants. Large plants, of course, need more room than small ones. To test their condition, turn the pot over and slip out the ball of earth. If it is found to be one compact mass of roots, it is high time that roomy new quarters were provided. Use pots of twice the previous size. Prepare fresh soil—a mixture of leaf mold and sand—and reset in this after removing as much as possible of the old soil adhering to the roots. Water thoroughly, as described above, and let them stand in the shade for a day or two.

It may be that your plants need some fertilizing material. It depends upon what kinds of plants you are growing, for some do not take kindly to enrichment, while others are gross feeders. Geraniums and chrysanthemums may be fed heavily. The cactus and ferns need no manures, but a dressing of bone dust is beneficial. You can make a good application of manure water for plants which need it by turning water upon a pail of stable refuse. Let it stand overnight and then drain off in the morning. You can judge of the strength of the liquid by the color, and if very strong, reduce to about the shade of strong tea. Then apply and it will make your plants boom.

It is well to remember another requirement of plants—the leaves must be kept clean. They are the lungs of the plant, and if clogged with dust, they cannot perform their office. It is well to cover plants when sweeping and then once every two weeks go over the leaves with a damp sponge. If this is done carefully it will not injure them in the least, but be an immediate benefit. If you have never tried it you will be astonished at the result.

If you act upon some or all of these hints we are very confident that you will have no further complaint about the thrift of your house plants. They will take on new life and reward you with an abundance of fine foliage and fragrant bloom.

Will Show Farm Movies.

"Reel" life on the farms of Wisconsin and other states will be shown in the motion picture section of the annual Farmers' Week program, to be given at the college of agriculture, Madison, during the week of February 5th-10th. Emphasis will, of course, be placed upon the modern improved methods of doing work for the betterment of farm homes, crops and live stock.

Fully 14,000 feet of activity in the field and feed lot, and from the live stock show rings to the cut-over regions of Wisconsin, will be shown. Most of these subjects were filmed especially for Wisconsin farmers. Much valuable demonstration work has been accomplished by these films, as only the most practical subjects have been chosen. The list includes reels on alfalfa culture, grain breeding, fence building, hog cholera control, views of the live stock winners at the Wisconsin State Fair in 1916, a meat-cutting demonstration, and more than 3,000 feet of views taken during the recent land-clearing demonstrations.

The new films prepared by the American Short-horn Breeders' Association, which had their first presentation in Chicago theaters this month, will be shown as a special feature of the Farm Week program. Besides showing the winning animals of this breed at the International Exposition, the pictures include "close-ups" of American judges at the Argentine International Exposition, James Brown, Frank D. Tomson, Robert Ogilvie and Frank W. Harding

Pictures showing the activity of some of the numerous energetic boys' and girls' pig clubs conducted by the federal extension workers in various parts of the country will be loaned to the managers of Farmers' Week by officials of the United States Department of Agriculture. As part of the Swine Week program these films will be especially appropriate.

Get This Valuable Seed Book

Salzer's big 184-page Catalog is filled with valuable agricultural information and money-making ideas for farmers, stockmen and gardeners everywhere. Your copy is ready—FREE. Write for it.

Salzer's Seeds are Northern Grown—vigorous, element-resisting and big crop producers. For 49 years we have been experimenting, testing and improving these pedigreed strains. Today, Salzer's Catalog offers you the highest quality seeds that scientific knowledge and practical methods can produce.

America's Headquarters for Field Seeds
Everything in Vegetable and Flower Seeds

CORN

Salzer's seed corn is thoroughly ripened, dry as bone and of high germination. Give your farm a chance. Plant Salzer's Seed Corn and get more bushels to the acre. Your success depends upon the strain you sow. We have many choice varieties—all hardy Northern Grown, brimful of strong, vigorous seed life. Send for sample and catalog.

OATS

Big paying varieties. Hold continuous records for mammoth yields. Stiff stalks and full, plump heads. Side-step poor crops by sowing Salzer's Seed Oats. Northern Grown stocks and a strain exactly to suit your soil and climate. Good stoolers. When you sow Salzer's oats you begin to realize the possibilities of your farm. Write for sample and catalog.

BARLEY

Earliest ripening varieties. Silver King has a record of 173 bushels per acre. Finest for malting and feeding—the kind that puts dollars in the bank. Northern Grown, pedigreed strains. Strong straw, well filled, heavy heads. Big crops assured. Heartily approved by Wisconsin and Minnesota Experimental Stations. Send for sample and catalog.

GRASS

Billion Dollar Grass, a Salzer creation, grows 6 to 8 feet tall. The wonder crop for green feed, ensilage, hay and seed. Fine stooler. Our Sudan Grass has produced 7 tons per acre. Stock thrives on it. Two to three cuttings. Many other superior varieties and mixtures. Luxuriant growing Clovers of all kinds. All Northern Grown. Salzer's strains give full returns. Write for samples and catalog.

ALFALFA

Too many farmers do not realize the wonderful opportunity in this miracle crop. Salzer's Northern Grown strains are the heaviest and most vigorous varieties. Three to seven tons per acre. Best feed for stock. Great money-maker. One of Wisconsin's Governors received $2500 in hay from less than 30 acres by sowing Salzer's 20th Century strain. Read about it in our 1917 Catalog. Never be satisfied till you try Salzer's Alfalfa. Send for sample and catalog.

Our 1917 handsome, illustrated, 184-page Catalog also describes all the standard varieties and latest novelties in vegetable and flower seeds. Write for it today. It is FREE.

DAIRY

Waukesha Holstein Men in Annual Meeting.

Holstein breeders of Waukesha county came together for their ninth annual association meeting in Waukesha, January 23d. It was as the committee had planned it to be—a meeting bigger than ever. Holstein enthusiasts to the number of 200 were present both at the meeting and at the banquet and the program following it. Business men from the city of Waukesha and friends from other local associations helped swell the number still more. Both the sun parlor and the spacious dining room of the beautiful Hotel Resthaven were com-

[illegible]

and approved. These reports showed a total of $1,300 and over expended for advertising during the year, resulting in the sale of nearly $30,000 worth of stock. With the new members elected at the meeting the association now has over 150 paid up members. Each member has agreed to try to secure at least one new man during the coming year. A movement to secure for Wisconsin the 1918 meeting of the national association was put under way when the motion was carried to start working towards this through the state association. A delegate selected by the directors is to present this to the state association. A national meeting and sale in Milwaukee would, in the minds of many of the Waukesha breeders be of greatest help to Holstein interests all over the country. This year's meeting, to be held in Worcester, Mass., is bound to suffer because of the long distance.

A resolution favoring the establishment of cow-testing associations without regard to breeds and encouraging such testing associations all over the state passed without a dissenting vote. The association is not in favor of restricting the testing of cows to animals of one breed. The Waukesha association is under a continuous management of nine directors, three new directors being elected each year. The three outgoing directors for this year, H. H. Earle, Stewart Reed and Arthur Rust, were voted to succeed themselves for another term. The business session ended with the election of new members.

Attorney J. K. Lowry, of Waukesha, opened the program with an address of welcome in behalf of the city. He urged one point in particular during his short speech and it met with the approval of those present. His suggestion was for all members to adopt the slogan, "What is good enough for Waukesha is good enough for me." In brief and concise sentences he showed the advantages of working for the community good more than for individual temporary profit. Following this Pres. Charles J. Will spoke a few words on the progress that has been made and some of the problems that are still facing the association. He mentioned the plan of supplying each Holstein herd of Waukesha county with a sire of the thirty-pound class. Some breeders have followed this plan during the last year. He asked the young breeders in particular to be careful in their selection of sires, urging them to follow the practice of consulting older and more experienced men in making purchases of herd headers. He called the attention of the members to the early employment of a county agent, asserting that no county in the state had better opportunities than Waukesha county and in his estimation hiring an expert adviser would do much towards increasing the yield of field crops in the county. The association will in all probability work with other county organizations towards securing a county agent soon.

Dr. J. I. Gibson, of Iowa, was slated for an address, but being unable to come, Mr. A. J. Frame, a local banker, spoke instead. His talk was interesting, as it pertained to the new rural credits act. Some of his statements were much to the disadvantage of the new act, but in his own way he showed clearly the weak points of the system and the conditions under which it might work successfully. He also emphasized the fact that money was never as cheap as it is today. Loans, according to Mr. Frame, can be made for as low as 5 per cent in Waukesha county due to the tremendous wealth of the country.

The feature of the day was the address by Hon. D. D. Aitken, president of the Holstein-Friesian Association of America. Mr. Aitken pointed to the tremendous progress that has been made by the Holstein cow during the last years. He mentioned the advance of records from a niggardly ten pounds per week to the latest of over 50 pounds. He recalled the contempt with which the Holstein was referred to in other years and the steady natural advance of the breed through merits of its own. "How much progress has man made in the same time?" asked Mr. Aitken. "Did we increase our earning capacity as much in the same time? No, the Holstein is so far ahead of us and the procession that we can hardly see her shadow in the distance." The agitation now being carried on by many dairymen for higher prices because of higher feed prices also came in for a scoring by Mr. Aitken. In his estimation, the basis for asking higher prices ought not to be feed prices, but rather food value sold. A quart of milk containing 15 cents' worth of nourishment ought to bring a price somewhat nearer the actual value than at present—not because of feed prices, but because of value contained. He touched briefly on the worth of the dairy cow to the country and his relation to cheap money in a community. From this he led over to the work of the dairy council and the results an advertising campaign, as is being carried on now, is sure to bring with it.

The Flavor of Butter.

The flavor that is "a little off" will creep in during the winter months if ever, for a number of things which may produce it are now present, with which we do not have to contend during the summer while all the troubles except the high temperature are as persistent now as in July.

One of the most prevalent troubles is keeping the cream too long. We are sometimes obliged to do this in order to get a sufficient quantity to churn, for we fancy that in cold weather there is no necessity for slaving over the churning two or three times a week.

Yet butter of the best quality is obtained when the cream is churned more often, not longer than twice a week, though a product of fair quality may be secured from a weekly churning if extra care is taken of the cream during the gathering process.

It must be kept in a well ventilated place or room, free from objectionable odors. If vegetables are kept in the same compartment, see to it that there is no decaying members among them. Cabbage is especially prone to affect the flavor of milk or butter.

It is at this season especially that the sanitary rules for the stable attendant need strict enforcement. When the cows are out on pasture the ordinary farm methods have much less of the objectionable in their make-up.

If you use silage and the barn is not up to date in point of ventilation, never feed the silage until after the milking is done and the milk cared for. It readily absorbs any odor, and the butter will be of inferior quality as a result.

Always scald pails, strainers and separator with as much care as in midsummer. Because the milk does not quickly sour is no reason why vigilance in this direction should be relaxed. The bitter odor is bound to

Here's Where it Tells-

It isn't a question of sentiment whether or not your cows are in the pink of condition—but it does make a big difference in your bank account. Since you are keeping cows for milk instead of for meat, better see to it that their milk-producing organs are kept working normally.

At the first sign of decreasing milk-flow, look for the cause. Ten to one it is due to some trouble with the digestive or genital organs, and such disorders are best set right by the use of Kow-Kure, a cow medicine backed by twenty years of success. Try Kow-Kure on your poor milkers and watch results. Hundreds of doubting cow owners have been convinced that this old remedy has no equal for the prevention and cure of Abortion, Barrenness, Retained Afterbirth, Milk Fever, Lost Appetite, Scouring, Bunches, etc.

Buy Kow-Kure from your feed dealer or druggist; 50c. and $1.00.

The Silver Mfg. Co., Sta 312 Salem, Ohio

creep in unless this detail is carefully attended to.

If the butter is hard to come, keep the cream in a warm room for several hours before churning. This is much more satisfactory than putting in hot water to raise the temperature of the cream.

If you still cling to the old dash churn, and it inclines to let the cream spatter upon the floor, pin a paper around the top of the churn, letting the sides project high enough to shut in all the splashes. When packing the butter away, scald all the crocks and pails thoroughly.

One that has had rancid butter in it can seldom be cleaned sufficiently to keep butter well afterwards, unless it be a stone jar; however, if it is necessary to use such vessels, perhaps the best method of sweetening it is to fill it with clay for a short time. This soil has considerable power to draw out objectionable flavors as nothing else can. When packing for winter always use the best of salt and cover with a cloth well sprinkled with salt, and avoid coloring materials.

Strive to keep the cream at the proper temperature before and during the process of churning and you will not have much need of artificial tints, if you have a good butter cow.

More butter is spoiled by being over rather than underworked. Don't churn when you are cooking onions and then be surprised if the butter is "off." If the process is carried on in any part of the kitchen, it is necessary to have the air fresh and free from other odors at the time.

Take heed that the utensils used in working the butter are thoroughly aired and dried after being used each time and before being used again, or put away. In the absence of direct sunlight this is slower and may not be thoroughly done unless special attention is given to it. Good butter can be made in the winter as well as in summer, but it takes careful attention to the details from start to finish.

Allowed Calf Meal to Get Too Old.

One of our subscribers, Mr. E. A. Watts, recently called our attention to the fact that one of his neighbors lost two calves and the local veterinarian made the claim that the deaths were due to the use of Blatchford's Calf Meal. As we considered this a very important matter we have asked the manufacturer of this meal what the probable cause of death would be. Here is his reply:

We may say in the whole course of our business career that we have never had a case where Blatchford's Calf Meal killed any calf. With the quite large business that we do, we have occasional complaints, perhaps one or two each season—not more than that—and in investigating these we find that nine-tenths of the trouble mostly shows itself in diarrhea, which is caused by overfeeding Blatchford's Calf Meal. Calves are very fond of it and the farmer will sometimes overfeed.

Sometimes a dealer will allow his stock to get old, and in such cases weevils appear in it and a good deal of the nutriment of the calf meal is destroyed or eaten by the embryo weevil. In such cases the meal lacks nutriment, and the calf does not do as well upon it as it should and it does not thrive, but we have never had any case of poison.

All the ingredients of which Blatchford's Calf Meal is composed are printed plainly on the bags, and fed either alone or collectively these ingredients are everything that would be beneficial to the calf.

It follows naturally that there is a right and a wrong way to use any food product and it may be well understood that weevils would very quickly impair the feeding value of any product, and, while it may be true, as stated in the above letter, that the meal in that case will lack nutriment and not be poisonous, still it must be remembered that the more indigestible part of the meal will be left and a calf might eat an irrational amount of that material. We feel, however, that no loss will be experienced if this food is fed rationally and kept in a fresh condition.

A Little About Our Dairy.

To the Editor:—We have wasted very little time with hard milkers and kickers. If any such happened in our herd we sent them to the butcher as soon as possible. We take the calf from its dam as soon as convenient, because we have in life had trouble with young calves running with the cows too long. A real good milk cow ought to, and will when properly fed, give an abundance of milk for two calves.

We think it more profitable to have the large share of cows come fresh in the fall; however, butter is usually better flavored if there are fresh cows now and then throughout the entire year. We are milking for this winter and are making butter from twenty cows, nine of which are three years old, six five years old and the balance seven years old. All cows are in good health and giving a good flow of milk. All surplus cows are fattened and sold with the steers. Of course, this is necessary; some cows are changed every few years. We keep them as long as they are profitable, but when they prove unprofitable no time is wasted in disposing of them.

We have used the cream separator for several years and like it well; in fact, would not try to handle so many cows without it. We like it because we can separate the cream from the milk soon after milking and have the milk fresh and warm to feed the young animals. Pigs are very fond of warm milk, and, my, how it makes them grow. We use lots of the milk for our chickens and would not try to handle them without plenty of milk. The separator is supposed to take all the cream from the milk and a good one properly managed will get the most of it, with much more ease and much less trouble than any other method. All the dairy work is done at the barn and a little dairy house near by. We have added improved dairy appliances as we thought we could afford them. Dairying on our farm has its ups and downs, joys and sorrows. Among the joys is the money; of course, the objective point comes first. If there was no money in the business we surely would not have spent our several years working with dairying. Even, however, if the money sometimes seems rather small for the labor expended, the butter money is a fine thing to have. It is a steady income, something to pay everyday expenses of the family.

Like all other work on the farm, there is pressing need of intelligence and ability to make use of it. There is ample room for the student of nature and science to give his powers of research full sway. I think there is pleasure in working among the dumb animals and especially among milk cows. The chief objection to the dairy business by many is that it is confining every day in the year. This objection, however, is not a serious one, for if I make money on my farm I must give it my daily attention. No man can neglect any kind of business and make the money he would by close attention to business, one of the secrets of success in any line of business, whether it be dairying, general farming or anything else.

Perhaps the most trying difficulty in dairying is the help. It is our experience, however, that a good farm hand, although he may have his preference for some kind of work, will do what is required of him and do it well when he is treated right. We have been quite successful in getting help from homes where boys and girls have been accustomed to milking.

Many young people are not taught to milk, however, and this is a great mistake. They should be taught to do such work, as they may have some of their own to do when they shall become grown, and many are looking for such help at all times and at good wages.

Subscriber.

"This is My Choice of Seven Makes,"

1000 in use

says A. J. Hurtig of Ogilvie, Minn.

Please read this letter—

"I am very much pleased with my silo. The material is good, and plenty of it. No trouble to erect same. If farmers intending to build a silo had chance to see your frost-proof, am sure they would not buy any other make regardless of price. **I had a chance to investigate seven different makes before placing my order with you, but it did not take much time for me to decide after I had seen the merits of your frost-proof.**

"Yours truly, A. J. HURTIG, Ogilvie, Minn., Oct. 26, 1916."

36° below—no frozen silage

"I am pleased with my silo," said P. A. E. Hall, R. F. D. No. 1, Bruce, S. D., in a letter Dec. 18, 1916. "It is 36° below this morning, and just a little frost around the edge. Several of my neighbors will build H-L-F Silos this summer."

Order Early. Get FREE ROOF

The H-L-F is sold direct from factory—*at factory prices.* You save at least $100. Big sales enable us to give carload price on single order. Order now for spring delivery and get FREE ROOF.

Mail coupon—big silo folder FREE

FREE folder gives details of freeze-proof feature, illustrates the everlastingly strong construction, tells names of nearby owners, explains how you will save *big money. Send coupon now—while it's handy.*

A Cure For Backache.

The farm housewife cannot be too often urged to insist on having her work table, cabinet, stove and all working surfaces in her kitchen the proper height. The farm woman necessarily spends a great part of her working hours in the kitchen and if she is to conserve her strength and health she must have all her equipment as well arranged, convenient and "comfortable" as possible.

[illegible] ight. Ex- [illegible] the most noticeable defect in farm kitchens is the height of these articles. The average woman must stoop slightly to her work, causing a straining of the muscles, which results in backache, round shoulders, and a general tired, worn-out feeling.

One of the simplest means for raising the height of tables is a block of wood with metal strips and screws or nails for fastening to the table leg. Another kind of block is furnished with wooden pin or bolt which is set into the block and also fits into a hole in the table leg. Still another style is the block sawed to fit a corresponding notch in the table leg, and fastended by means of nails.

Four blocks of wood or a piece of gas pipe, and a little time, are all that are necessary to remedy this difficulty. Three different styles of blocks are shown herewith, any of which will prove satisfactory for lengthening the legs of kitchen equipment and bringing it up to the proper height. The thickness of the blocks should be regulated according to the height of the person using the table most. Bricks may be substituted for blocks if more convenient, or the legs of tables and cabinets may be spliced with gas pipe.

As a rule, the working surface should be about thirty-two inches from the floor for a woman of average height (five feet, five inches). Some housewives claim that they work most comfortably at a table on a level with the hips. Each worker should determine for herself at which height she works with the least effort and when the correct height has been determined tables and all working surfaces should be made to conform. This will save many a backache and enable the housewife to maintain an erect, healthful and comfortable position at her kitchen tasks.

"Meat Pudding" Season Is at Hand.

The butchering season calls to mind an old-fashioned recipe for "meat pudding."

All meat not used for sausage, hams, shoulders or side meat may be placed in a kettle to be cooked for this delectable dish. This includes the head, with tongue; the heart, liver and all clean skins after lard has been stripped from them. To these trimmings add water and cook slowly until very tender. Remove bones and largest pieces of meat, cut the meat into small pieces and place back in the kettle. Add water and thicken with corn meal and buckwheat flour, about equal portions. Cook slowly, stirring constantly; season to taste with salt, pepper and sage. When done pour in dripping pans. When firm, slice down. Serve cold or fry like mush.

Efficiency in the Home.

'On the efficiency of the home depends the economic, ethical and spiritual values of the nation," said Miss A. L. Marlatt, director of the course in home economics at the University of Wisconsin, in an address on efficiency in the home before the convention of the Vocational Educational Association of the middle West just held in Chicago.

Efficiency in the home, of course, is dependent on the standards of living and the standards of living are in turn dependent upon the ideals of the housewife, the demands of man, the limitations of income and subjection to fashion or social convention. If the housewife's ideals are constructed on a basis of false reasoning, if she allows her profession of homemaking to be overshadowed by fashion or social convention, her efficiency in the home is necessarily lowered.

The business organization of the home in its relation to the physical and intellectual needs of the family is an important factor in successful homemaking, Miss Marlatt told the convention. To be able to establish a well-managed factory which will provide for the physical needs of the family in the most efficient manner, the housewife should be equipped with a knowledge of the laws of mechanics and the principles of sanitation, economics and nutrition. When parts of her household machinery are out of repair she should be able to thoroughly investigate the trouble and see that the defect is efficiently repaired. The intellectual needs of the family may be provided through better education for parenthood, a discriminating choice of literature, and a knowledge of the best forms of amusement. The spiritual necessities of the home are met only through knowing the laws of psychology, ethics and judgment in training the will.

The working basis for achieving the knowledge necessary to become an efficient housekeeper, according to Miss Marlatt, lies in familiarity with the relative value of expenditure as it is gained by a proper division of the budget, a recognition of limitations due to fatigue, the conservation of energy by the use of labor-saving devices and living with the family rather than slaving for the family.

Hints For the Seamstress.

Sit with both feet on the floor.

See that the light falls over the left shoulder.

Do not allow the sunlight to fall on the work and do not sew in dim light.

Do not pin your work to the table or to your clothing.

Bring the work to your eyes, not your eyes to the work.

Do not bite the thread; it may crack the enamel on your teeth, soil your work, and spread disease germs.

Make all permanent stitches small and even, and have the wrong side, when finished, as neat as possible.

Use a short thread for sewing; it may be as long as the distance from shoulder to shoulder or from finger tip to elbow; basting thread may be longer.

To prevent kinking, thread the needle before breaking the thread from that on the spool.

A knot is used only in basting or when it can be hidden.

Never cut notches in the cloth to correspond to those in the pattern; mark the places where they should be with pins inserted perpendicular to the edge of the cloth.

Wash your hands before beginning to sew.

Always wear a thimble that fits the second finger of the right hand.

Wear a sewing apron.

When you stop sewing, put the needle in the case, fold your work neatly and put it in the sewing bag.

The Need of Good Literature in Rural Homes.

To the Editor:—I wonder how many of us ever think seriously enough about the necessity of having proper literature in the rural home? Almost any subject pertaining to the farm and home is discussed more frequently than this, and it is practically the basis for all improvement, development and progress in general of the community and the home. Clubs, good schools and fine roads are all well enough, but in speaking of them we are speaking of results of former training of minds of those interested through reading, thereby profiting by the experience of others.

Proper literature tends to the development of high ideals and a desire toward the betterment of one's condition as well as that of others.

It is the duty of every farm parent to select judiciously a variety of reading matter for the family. It is regretable to notice the character of the literature to be found in many homes. All of it is read and much of it is selected by the children. Usually it is light reading matter, that which appeals to the mind of the young for the time being, regardless of the effect it has upon the morals. There is often very little that tends to instruct and inspire.

The boys and girls of the rural home need proper literature as a means of instruction as well as a form of diversion. Therefore, great care and thought should be exercised in the selection. A good, reliable newspaper, a few current magazines which are authoritative and practical, a good agricultural magazine and also some historical works—all these are, to my mind, absolutely necessary and essential to the development of the child in the rural home.

True, when the boys and girls become of proper age they are sent to the city schools. But what about the years between when their minds are most susceptible?

I fear too many of us are so busy selecting improved stock for the farm, planning for next year's crop and endeavoring to add more acres to our farms that we forget the pliable minds of our children and neglect to furnish them with the necessary aids to the culture of their hearts and minds.

And what about the mothers and fathers, tired from the routine of farm work and to a certain extent isolated from the association of others? Do not they, too, need the best of literature as an inspiration and an aid to awaken them to the conditions of home and community? Fine schools will be established, clubs organized and good accomplished in every way if the minds of the people are trained in the proper channels by the reading of good literature. Mrs. H. I. Moser.

A Perfect Day.

When you come to the end of a perfect day,
And you sit alone with your thought,
While the chimes ring out with a carol gay,
For the joy that the day has brought,
Do you think what the end of a perfect day
Can mean to a tired heart
When the sun goes down with a flaming ray,
And the dear friends have to part?

Well, this is the end of a perfect day,
Near the end of a journey, too;
But it brings a thought that is big and strong,
With a wish that is kind and true,
For mem'ry has painted this perfect day
With colors that never fade,
And we find at the end of a perfect day
The soul of a friend we've made.

—Bond.
(Requested.)

Recipes.

Codfish Balls.—One pint of codfish, minced fine and scalded; one quart of hot boiled potatoes mashed fine or put through potato ricer. Mix fish and potatoes together, add one-fourth of a cup of butter, about as much cream, a little pepper and two well-beaten eggs. Keep all as hot as possible. Beat together with a fork. Roll lightly in flour and fry like doughnuts in very hot lard and beef drippings, half of each.

Potato Dumplings.—One and one-half cups flour, five teaspoonfuls baking powder, one-half teaspoonful salt, three teaspoonfuls butter, one-half cup riced potato, one egg beaten light, three-fourths cup of milk. Sift together the flour, baking powder and salt; work the butter into the mixture; mix the milk, beaten egg and potato thoroughly and use in stirring the flour mixture to a dough. Turn upon a floured board and knead slightly, roll into a sheet and cut into rounds. Set close together in a buttered steamer and let steam over a kettle of boiling water or meat about fifteen minutes. Do not open the steamer during the cooking, or allow the water to stop boiling.

Tomato Soup.—Put over the fire three quarts of sliced or canned tomatoes, three branches of celery, three cloves, three tablespoonfuls of sugar, three teaspoonfuls of salt, half a bay leaf, three sprigs of parsley, and half a red pepper with an onion and a half, chopped coarse. Let cook twenty minutes, pepper with an onion and a half chopp- then strain through a fine sieve using a pestle to secure as much of the tomato as possible. Melt three tablespoonfuls of butter, into it stir and cook three tablespoonfuls of flour, until bubbling throughout; let chill a few minutes; add a little of the tomato pulp and stir; add more pulp several times, stirring meanwhile, then when smooth and well diluted stir into the hot soup; continue to stir until boiling, when the soup is ready to serve.

Steamed Fig Pudding.—One cup raisins, one cup chopped figs, one cup chopped suet, one cup sweet milk, one cup dark molasses, one teaspoonful soda, two and one-half cups flour, one teaspoonful each cinnamon, nutmeg and ginger. Steam three hours. Serve with hard sauce.

Win An Easter Surprise Package

Solve This Puzzle

Here are seven ponies in a pen. By drawing three straight lines you can put each one in a pen by himself. If you can do this we will send you as a prize, an Easter surprise package, containing 36 beautiful Easter novelties, seals, cards and stamps. This is one of the most artistic Easter packets put out. All you have to do is enclose four cents stamps in your letter to pay postage and cost of mailing. We will also send a certificate for 1500 Free Votes in our grand contest for a beautiful Shetland pony.

Fine Pony Given Away

Remember the Pony will absolutely be given away in the grand contest which we will tell you all about. Send your answer at once so you can be entered in the great contest. In case of a tie a pony will be sent to each person so tied. Full particulars by return mail in same letter with Easter packet.

THE YOUNG FOLKS

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

The Little Red Hen.

Dear Young Folks:—I surely enjoy reading the letters from boys and girls. I read them all alone to myself. I am nine years old and go to school. I have a good time when I am at school and when I am at home, too. I have always liked the story about the little red hen, so I am going to tell it to you.

Once there lived a little red hen in a little red house, and a wolf lived in

LITTLE JACK HANLEY AND HIS DOG

the woods. He knew that the little red hen lived there and one day he went to the house and looked in at the window and saw the little red hen. But he could not get her, so he went home. The next day he went to get her and he hid until she came out. Then he got behind the door and when she came in he caught her and put her in his bag and started home.

On the way he got sleepy, so he lay down by some rocks and went to sleep. The little red hen had her scissors in her pocket and while he was asleep she took them out and cut a hole in the bag big enough so she could get out. Then she filled the bag with rocks and flew home.

When the wolf woke up he started home. His mother was standing by the door and said, "Have you got the little red hen?" "Yes," he said, "and she will make a delicious dinner. When I count three you have the lid off the kettle and I will pour her in." So he counted, "one, two, three," and she had the lid off and he poured the rocks in, and the kettle upset and the water splashed out and scalded the wolf. So the little hen got to live in the little red house. —Marie.

A decision sustaining John J. Dillon, New York, state commissioner of foods and markets, in his order directing dealers to stamp separately each cold storage egg, was handed down by Supreme Court Justice Bijur. The court made permanent, pending trial of the issues involved, a temporary injunction restraining several large dealers from selling unstamped eggs. Justice Bijur held that, unless storage eggs are stamped when they are removed from the original packages, their "identity becomes so lost that, unless the individual egg is marked, all trace of its character is lost."

THIS Overland AUTO FREE

Send Your Name

I want to give you this brand new 1917, Five-Passenger Touring Car free of all cost. Already, I have given away over 60 autos to men and women everywhere on my wonderful plan, which is endorsed by hundreds of happy and successful people. You can be next. It requires no experience—no money—just a few weeks' easy, spare time hustling in your own community will do it. The only condition is, that you live on a farm or in a town of less than 10,000 population. If you do—write me today. As a starter, I will give you 10,000 free points toward an auto. On a post card say, "Without obligating me, send me your plan by which I can get an Overland automobile free." Address:

1790—Ladies' one-piece house gown. The sleeve is in bell shape. The pattern is cut in 3 sizes: Small, medium and large. It requires 7 yards of 36-inch material for a medium size.

1644—Children's rompers, with sleeve in either of two lengths. The pattern is cut in 5 sizes: 1, 2, 3, 4 and 5 years. It requires 3 yards of 27-inch material for a 4-year size.

1999—Ladies' one-piece pajamas. The leg portions may be gathered or fin-

ished with the lower edges unconfined. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6 yards of 36-inch material for a 38-inch size.

2000—Ladies' dress, with body lining. The pattern is cut in 6 sizes: 32, 34, 36, 38, 40 and 42 inches bust measure. It requires 6 yards of 44-inch material for a 36-inch size.

1996—Girls' one-piece dress, with sleeve in wrist or elbow length, and with or without yoke facing. The pattern is cut in 5 sizes: 4, 6, 8, 10 and 12 years. It requires 3½ yards of 36-inch material for a 6-year size.

2004—Junior dress, with sleeve in either of two lengths. The pattern is cut in 3 sizes: 12, 14 and 16 years. It requires 5¼ yards of 36-inch material for a 14-year size.

1778—A simple, popular model. The sleeve may be in wrist or elbow length. The pattern is cut in 4 sizes: 8, 10, 12 and 14 years. It requires 4¾ yards of 44-inch material for a 12-year size.

1998—Dress for misses and small women. The pattern is cut in 3 sizes: 16, 18 and 20 years. It requires 6½ yards of 36-inch material for an 18-year size.

International Sunday School Lesson.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for February 4, 1917.

Jesus the Savior of the World.

LESSON TEXT—John 3:1-18.

GOLDEN TEXT—For God so loved the world, that he gave his only begotten son, that whosoever believeth in him, should not perish, but have everlasting life.—John 3:16.

This most famous interview in history occurred probably in some room in Jerusalem where Jesus was a guest, a room reached by an outer stairway so that he could receive visitors privately.

I. The Teacher of the Jews (vv. 1, 2). Nicodemus was a member of the sanhedrin (Ch. 7:50). He belonged to the Pharisees who were much devoted to the scriptures and in whose hand the political affairs were largely placed by the Romans. There are several reasons why Nicodemus came to Jesus by night. Prudence dictated secrecy, but that he came at all was encouraging. He was more apt to find Jesus at home in the evening. He had much that he wished to learn, and needed a quiet hour, removed from the crowd. The things that Jesus had done and taught made Nicodemus think that Jesus might be the Messiah. Nicodemus wanted to know how to be blessed or happy.

II. A Teacher From God (vv. 3-8). A great majority of the disciples of Jesus came from the common people (I. Cor. 1:26) yet for all classes he had the same message, "Ye must be born again." The answer of Jesus was according to the condition of the man before him, the deepest need of his soul. Literally, he said, "Most assuredly, except a man (anyone) be born again (anew or from above) he cannot enter the kingdom of heaven." To be born anew means to be born again. It matters not what your parentage may have been. If any man could do without a new birth, Nicodemus was that man. He was moral, religious and sincere. The instrument through which this birth is effective is the word of God (I Peter 1:23; James 1:18; John 15:3) and the author is the Holy Spirit (v. 5; Titus 3:5). Water is a symbol of the word (Eph. 5:26). Literally translated, this passage would read, "Except one be born of water and wind." And as wind "by universal consent refers to one factor in regeneration, the Spirit, so the water manifestly refers to the other element of regeneration, the word." The main contention is that the word is the instrument in the regeneration. Although not expressly mentioned here, it is elsewhere. Nicodemus was a teacher of Israel (v. 10 R. V.) and yet he did not know so fundamental a truth as the new birth, though the Old Testament taught it.

III. The Pupil's Difficulty (vv. 9-13). The works of the flesh as contrasted with the fruits of the Spirit are brought out in the Epistles, yet like Nicodemus, people are asking today, "How can these things be?" Jesus challenges Nicodemus with the words, "Art thou a teacher of Israel and understandest not these things?" What Jesus said to Nicodemus (vv. 11-13) is true of the scriptures now, especially of the New Testament. They testify to the facts which Jesus knew and revealed, he having been in heaven, and come down from heaven for the purpose of making them known. To be born implies that it is the starting point of a new life, that we must grow as a child grows to be a man until it reaches to "a perfect man unto the measure of the stature of the fullness of Christ" (Eph. 4:13).

IV. The Lesson Illustrated (vv. 14, 15, 18). Jesus believed in objective teaching, and he here refers to a memorable event in the early history of the Jews as illustrating his teaching. The journey through the wilderness to the promised land became weary and discouraging, and the Israelites complained bitterly of their hardships, complaining against God and against Moses. Punishment came in the form of fiery serpents, called fiery from the burning, stinging sensation caused by their bite. So intense was the venom of the bites that they became fatal in a few hours. This punishment made the people realize the awful evil of sin. They acknowledged their sin, and prayed for forgiveness. Moses made a brazen serpent, and carried it through the camp so that all could see, and looking became an act of faith, implying repentance and return to obedience and to God. Thus our salvation is literally, "Look and live;" believe and have eternal life; doubt and perish (Mark 16:16; John 3:36).

V. God's Greatest Gift (v. 16). This is probably the most familiar verse known to the Christian world, and has led more souls to salvation than any other in the Bible. In it is revealed the mighty God—"For God;" a mighty motive—"God so loved;" a mighty scope—"God so loved the world;" a mighty sacrifice—"God so loved the world that he gave his only begotten Son;" a mighty escape—"should not perish;" a mighty gift—"eternal life."

This verse is the gospel in a nutshell; the origin and grounds of his salvation.

Won't Mamma be S'prised?

This isn't a fancy picture. Mamma has gone down town shopping. Nan, Betty and Bobbie are afraid she will not be back in time to make the promised Jell-O dessert for dinner, so they are making it themselves.

As has already been explained in these columns, Jell-O is so easily made up that a child can do it.

JELL-O

makes up into the most delicious desserts and salads, and, as it costs only ten cents, is coming to be as generally used in small-town and farm homes as in the city, where it is immensely popular.

In every Jell-O package there is a little folder containing rules, suggestions and recipes for making up Jell-O in all possible forms.

There are seven flavors of Jell-O: Strawberry, Raspberry, Lemon, Orange, Cherry, Peach, Chocolate. Each 10 cents at any grocer's or any general store.

The flavors are pure fruit flavors and the full strength of the flavors is preserved by the air-tight and moisture-proof waxed-paper Safety Bags enclosing the Jell-O inside the cartons.

The price has never changed. It is ten cents today just as it has been from the beginning.

The 1917 Jell-O Book is the most beautiful ever issued and it contains more useful information for housewives than any other. Send us your name and address and we will mail you one of the books.

PART IV.---One Squaw Man.

CHAPTER III—Continued.

"Yes." Her eyes were on the floor; she did not see that scrutiny. "And you must get out of here before word comes of those men penned up there. There would be no waiting for trial then; they would shoot you."

"And that is what you came for?"

"Yes;" and she drew a sharp knife—an Indian knife—from her belt under the shawl. With a quick stroke, she severed the knotted cords and they fell from his wrists; then she dropped on her knees, a flash, once, twice, of the blade in the light, and he stooped and raised her.

"You are doing this for me," he said, drawing her to him, "without knowing whether I deserve shooting or not?"

"Don't speak of that part of it!" she burst out. "When I let myself think, feel as if I am going crazy!"—then she stopped short. "And a crazy woman just now would handicap you some. No, Jack, we need all of our wits for tonight—here," and unfastening the belt from under her shawl, she buckled it about him. It contained two loaded revolvers.

"It's the first time I've armed you as I've seen sweethearts or wives do," she said, looking up at him. "It may be the last. I only ask one thing—you will not, unless it is the last means of saving your own life, turn one of these against my friends?"

Even then, the weakness of the man in him came uppermost.

"But if it is to save my own life?"

Her hands went quickly over her eyes, as if to shut out sight or thought.

"Don't ask me—only go—and—take care of yourself!"

He caught the hands from her eyes, kissing her fiercely—exultantly.

"Then I am first to you—nearer than all the rest! My girl, you've proved it tonight, and I'll show you! If you know how to pray, pray for me tonight—for me and the men in that death trap. Do you hear? I am going now. Here is this letter; it will tell you all. If I never come back, tell Prince Charlie he is right at last—that I believe him. He will understand. My girl—mine—it is not an eternal goodby. I will come back if I live, and I will have to live long enough for that! Here, just once, kiss me, my girl—my girl!"

The next instant she was flung from that embrace and fell with a faint scream to the floor.

The guard dashed in, and was dextrously tripped by an unlooked-for figure close to the wall, his gun wrenched from him, and a staggering blow dealt that sent him to his knees.

Clouds had swept over the cold stars, and the sentry could see but dimly the equestrian figure that came clattering down the avenue.

"Hadn't you better wait for company, Miss?" he called, but no answer was given; and in much wonder, he was about to call again, when pistol shots from the shack aroused the camp. He called a halt; that was heeded no more than his question, and he sent a random shot after the flying figure—not for the purpose of hitting the girl, but to impress on her the duty of a sentry and some idea of military rule. Before the last dull thud of hoofs in the snow had ceased to be heard, Roberts had staggered to the door, firing wildly, and calling to stop the prisoner—to stop the horse thief.

There was nothing in the camp to do it with. He was gone—everyone was blaming everybody else for it; but no one thought of blaming the girl, who lay in a dead faint on the floor, where he had flung her, that none might think she had let him go willingly. And Miss Rachel was cared for very tenderly, and a man was sent to the ranch to assure Mrs. Hardy of her safekeeping, waking Mrs. Hardy out of a delicious sleep, and mystifying her completely by the information. The only one about the house who might have helped elucidate happened to be remarkably sound asleep at the time the messenger arrived—an Arrow encased in the quiver of rest.

CHAPTER IV.

Through the Lost Mine.

AN HOUR before day in the Kootenais! Not the musical dawn of that early autumn, when all the woods were a-quiver with the fullness of color and sound; when the birds called to each other of the coming sun, and the little rills of the shady places moistened the sweet fern and spread its fragrance around and about, until one could find no couch so seductive as one on the amber grasses with the rare, all-pervading scents of the virgin soil.

Not any of those seductions solaced or made more bitter the watch of the men who stood hopeless in the snow of that treacherous ravine. Not even a fire dared be lit all the night long, because of those suddenly-murderous natives, who, through knowing the secrets of the cleft earth, held their fates at the mercy of eager bronze hands.

"And one man who knew the country could have prevented this!" groaned Hardy, with a thought of the little wife and Miss Margaret. How would they listen to this story?

"If we had Genesee with us, we should not have been penned up in any such fashion as this," decided Murray, stamping back and forward, as many others were doing, to keep their blood in circulation—for what?

"Hard to tell," chimed in the scout from Idaho. "Don't know as it's any better to be tricked by one's own gang than the hostiles. Genesee, more'n likely, was gettin' ready for this when he run off the stock."

Just then something struck him. The snow made a soft bed, but the assailant had not stopped to consider that, and quick as light his knee was on the fallen man's chest.

"Take it back!" he commanded, with the icy muzzle of a revolver persuading his meaning into the brain of the surprised scout. "That man is no horse thief. Take it back, or I'll save the Indians the trouble of wasting lead on you."

"Well," reasoned the philosopher in the snow, "this ain't the best place I've ever been in for arguin' a point, an' as you have fightin' ideas on the question, an' I haven't any ideas, an' don't care, I'll eat my words for the time bein', and we'll settle the question o' that knock on the head, if the chance is ever given us to settle anything, out o' this gully."

"What's this?" and though only outlines of figures could be distinguished, the voice was the authoritative one of Captain Holt. "Mr. Stuart, I am surprised to find you in this sort of thing, and about that squaw man back in camp. Find something better to waste your strength for. There is no doubt in my mind now of the man's complicity—"

"Stop it!" broke in Stuart curtly; "you can hold what opinion you please of him, but you can't tell me he's a horse thief. A squaw man and adopted Indian he may be and altogether an outlaw in your eyes; but I doubt much your fitness to judge him, and I advise you not to call him a thief until you are able to prove your words, or willing to back them with all we've got left here."

All they had left was their lives, and Stuart's unexpected recklessness and sharp words told them his was ready as a pledge to his speech. None cared, at that stage of the game, to question why. It was no time for quarrels among themselves when each felt that with the daylight might come death.

Afterward, when the tale was told, no man could remember which of them first discovered a form in their midst that had not been with them on their entrance—a breathless, panting figure, that leaned against one of their horses.

"Who is it?" someone asked.

"What is it?"

No one answered—only pressed closer, with fingers on triggers, fear-

ing treachery. And then the panting figure raised itself from its seat on the horse's neck, rose to a stature not easily mistaken, even in that light, and a familiar, surly voice spoke:

"I don't reckon any of you need be puzzled much to find out; hasn't been such a long time since you saw me."

And despite the wholesale condemnation of the man, there was not a heart that did not grow lighter with the knowledge. They knew or believed, that here was the one man who had the power to save them, if he cared to use it; but would he?

"Jack!"

Someone, at sound of his voice, pushed through the crowd with outstretched hand. It was not refused this time.

"I've come for you," was all Genesee said; then he turned to the others.

"Are you willing to follow me?" he asked, raising his voice a little. "The horses can't go through where I've got to take you; you'll have to leave them."

A voice close to his elbow put in a word of expostulation against the desertion of the horses. Genesee turned on the speaker with an oath.

"You may command in a quiet camp, but we're outside of it now, and I put a little less value on your opinion than on any man's in the gulch. This is a question for every man to answer for himself. You've lost their lives for them if they're kept here till daylight. I'll take them out if they're ready to come."

There was no dissenting voice. Compared with the inglorious death awaiting them in the gulch, the deliverance was a Godsend. They did not just see how it was to be effected; but the strange certainty of hope with which they turned to the man they had left behind as a horse thief was a thing surprising to them all, when they had time to think of it—in the dusk of the morning, they had not.

He appeared among them as if a deliverer had materialized from the snow-laden branches of cedar, or from the close-creeping clouds of the mountain. They had felt themselves touched by a superstitious thrill when he was found in their midst; but they knew that, come as he might, be what he would, they had in him one to whom the mountains were as an open book, as the Indians knew when they tendered him the significant name of Lamonti.

Captain Holt was the only rebel on the horse question; to add to the spoils of the Indians was a bitter thing for him to do.

"It looks as if we were not content with them taking half our stock, but rode up here to leave them the rest," he said, aggressively, to nobody in particular. "I've a notion to leave only the carcasses."

"Not this morning," broke in the scout. "We've no time to wait for work of that sort. Serves you right to lose them, too, for your blunders.

It was no time for argument or military measures for insubordination; and bitter as the statement of inefficiency was, Captain Holt knew there were some grounds for it, and knew that, in the eyes of the men, he was judged from the same standpoint. The blind raid with green scouts did seem, looking back at it, like a headlong piece of folly. How much of folly the whole attack was, they did not as yet realize.

It was not far that Genesee led them through the stunted, gnarled growth up the steep sides of the gulch. Half way to the top there were, in the summer time, green grass and low brush in which the small game could hide; but that rose a sheer wall of rock clear up to where the soil had gathered and the pines taken root.

In the dusk they could see no way of surmounting it; yet, there was no word of demur, not even a question. He was simply their hope, and they followed him.

And their guide felt it. He knew few of them liked him personally, and it made his victory the greater; but even above that was the thought that his freedom was due to the girl who never guessed how he should use it.

He felt, some way, as if he must account to her for every act she had given him the power to perform, as if his life itself belonged to her, and the sweetness of the thought was with him in every step of the night ride, in every plan for the delivery of the men.

At the very foot of the rock wall he stopped and turned to the man next him. It was Hardy.

(To be continued.)

School Consolidation Pro and Con

(Continued from page 10.)

building. Teachers can usually be secured who will do janitor work in the small school, or it can be done by the big boys sometimes without pay and sometimes by the payment of a very small sum. Sanitary supplies at considerable cost will be required for the consolidated school and it is argued these would not be needed where there were a few pupils. Fuel would probably cost more and a building with a large number of pupils in it should have a ventilating system. It would probably be necessary to put in an expensive furnace in the consolidated school and keep a man on the job to fire it. The tendency will be to go into special subjects which will not only require more teachers but higher-priced teachers. Transportation of children is an added cost. Good wagons cost a great deal and sometimes poor ones are used. Then there is the problem of drivers, heating the wagons and reaching the families who will be the greatest distance from the central school. Bad roads will interfere with transportation and drivers will be uncertain and in some cases reckless and careless. Children might often have to walk to the road and wait in bad weather for a belated wagon. Officers of a district, seeing the increased expense of the consolidated school, might provide uncomfortable wagons to save money. Teams sometimes run away and stoves in wagons tip over and these are dangers charged up to the consolidated school project. Many of the children would be much farther from home at the centralized school and this might be unfortunate in case of sickness. And, furthermore, children ought to have as much exercise each day as they get walking back and forth from the district school.

As to land valuations, the question arises whether the consolidated school wouldn't increase values close to the school and lessen them farther away where the district schoolhouse has been abandoned. If a man wants to buy a farm he asks how close it is to church and school. The answer of many farm owners in the consolidated district would require an explanation. Then there are those who are skeptical about taxes being reduced by the centralized school. The very first thing there would be a tax for a new schcolhouse. That is the bugbear which has defeated many a consolidation of school districts. What is to be done with the present school property which will be rendered absolutely useless? And who wants to throw away public property even in the interest of a public improvement? The final argument of the man opposed to consolidation is that those who want a graded or high school should go to the town school and that there are too few in the district who require this training to warrant the change. When the pupil grows up let him go to the high school. There are others who fear that the consolidated school is only a stepping stone to a country high school, and we have seen men who can look far enough ahead to see the expense of a college thrust upon them in the country districts.

These are some of the arguments pro and con on the consolidated school question. It is a good, big topic of interest to every farmer and we are only saying what we hear said about it and what our expert educators of the state hear about it. The state superintendent advises us that there is a law which will permit districts taking the consolidation dose on trial to see whether it really does them any good. A district may discontinue its school for a year and retain its organization. Children of school age may be sent to another district and the tuition paid by the district. The state allows state aid of $150 a year for such a district provided the board arranges to send all the children of school age to another district and also arranges for transportation. The Wisconsin Farmer would be glad to hear from any of its readers who have ideas on the subject of consolidation, for or against.

The Rock Island "CTX" Plow enables you to defy droughts. "CTX" bottoms turn the furrow slice clear over—lay it *flat* on the subsoil and thus avoid all chances of "air spaces," which in dry seasons prevent moisture coming up from subsoil to nourish the growing crops.

Thirty-inch land and furrow wheels, *extra wide* tires—even distribution of weight *and* Rock Island long-distance, dust-proof, light-running axles make Rock Island Tractor Plows the lightest drafted tractor plows known. It is also the **Strongest Tractor Plow Made** Built of extra strong material, heavily braced everywhere. Beams of extra heavy, high carbon steel. Largest, strongest axles. High arched beams give exceptional clearance. *Plow cleans itself of trash.* Does not clog. Most easily operated.

Better Farm Tools Mean Better Crops

The better farm methods that are making bigger crops and greater farm incomes *require* better farm tools. And when the majority of farmers think of *better* farm tools, they think of the line of farm tools that represents 62 years of constant, unceasing *improvement* of farm implements.

Rock Island Farm Tools

Hundreds of thousands of our implements are in use in all parts of the world. The demand is the best guaranty we know of. Our policy is the lowest prices possible—but price always a consideration second to the *best* design, materials and workmanship.

First 62 years ago—in 1855, when this concern began business. *First* today—in 1917. Get the book and learn *why*.

Rock Island Bonanza Disc Harrow

Great Western Manure Spreader

The spreader with *all four wheels under the load.* The strongest spreader made, constructed of heavy steel. Made with the original and genuine Endless Roller Bearing Apron Spreader. Over 110,000 in use—and everyone who owns one will tell you it is the best spreader obtainable.

Rock Island Bonanza Disc Harrow

Here is the harrow that *always discs* the field at uniform depth because *it angles from the outer instead of the inner* ends. This means that the *bumpers always bump*, which insures *longer* life to the discs. No chance of the inner discs riding or cutting into each other. Instantaneous Pressure Lever, which carries the pressure ten inches closer to the gangs than is possible on any other harrow. Learn *more* about this harrow before you buy.

Two Cents Grinds a Bushel of Feed

INTERNATIONAL feed grinders grind a bushel of feed for you for two copper pennies. Can you beat that? Whether you use a small grinder or whether you require a large one, running it with your light tractor or engine, you can grind your own feed cheaper than you can buy it.

An **International** is the feed grinder you need. With three styles and three sizes to choose from, all of the highest quality, you can get an **International feed grinder** of just the right type for your work.

Type B **International** feed grinders are designed specially for grinding corn on the cob. There are three sizes, with 6", 8", and 10" plates. Type C is the small grain grinder, for oats, wheat, shelled corn, etc., and is made in 6" and 8" sizes. Type D is the heavy grinder for corn in the husk, Kafir corn in the head, etc., and is made in 8" and 10" sizes.

Write for our booklets covering every feature of **International** feed grinders and **Mogul kerosene engines** and **tractors**

UPPER WISCONSIN

Quack Grass Problems in Upper Wisconsin.

H. Bluemenstein and son, of Woodruff, Oneida county, had two fields badly infested with quack grass. Each included about six acres. One of these fields was summer fallowed in 1915, the other being planted to potatoes and closely cultivated. At the end of the first season the former was rid of quack grass, while the cultivated field contained small patches impossible to pull because of the growing plants. In 1916 the work was continued with vigor, and the potato field seems now to be wholly free of the troublesome weeds.

[illegible] on a four-acre field which he wished to clean up. As the soil was sandy the quack had become deeply rooted. The field was first summer fallowed until the middle of June, 1915, when it was sown to buckwheat. This year potatoes were planted in the field and but little quack appeared.

F. S. Campbell and Sons, Three Lakes, had a field of about thirty acres which was badly infested with quack. This field was divided into four parts, one of which was summer fallowed; another partially summer fallowed with land sowed to buckwheat; the third was seeded to mammoth clover and the fourth portion was planted to potatoes. On the portion that was summer fallowed the quack was completely eradicated. On the portion sowed to buckwheat but few patches of the quack could be discovered. On the portion seeded with red clover but little benefit resulted. On the portion planted to potatoes, while the quack was hurt, yet small patches infested the whole field. The kerosene spray was used upon patches of quack, also upon patches of Canada thistles, doing but little injury to the quack, although making the eradication of the thistles almost complete. The thistles were out just below the ground and about half a pint of kerosene was applied to the roots. No thistles were seen within six weeks afterward.

Beside the co-operative weed demonstrations in this county, the seed inspection department carried on similar projects in 1916 with farmers in fourteen other counties, serving to drive home the fact that weeds can be eradicated through steady effort, coupled with a little "head work."

"The farmer quite frequently fails to appreciate the tax which he is obliged to pay from the unrestricted growth of weeds," says H. L. Russell, director of the experiment station, in his latest report. "Often they gain a foothold through contaminated seed, as is so frequently the case with wild mustard, or through manure as was observed this season in Oconomowoc where gardens were infested with Canada thistle and perennial sow thistle which came from manure from the Chicago stockyards.

"In the new north the lumberman has sowed the quack grass and thistle far and wide. These have gained a foothold from the hay imported for winter feed of horses. The problem of weed eradication is, therefore, one which is just as pertinent to the settlers in Upper Wisconsin as it is in the older districts in the southern part of the state. General interest in the matter of weeds is rapidly increasing is shown by the fact that this year over 1,200 weed specimens have been identified by Mr. Stone."

These experiments were carried on in connection with the Wisconsin College of Agriculture.

Farm Homemaking in Upper Wisconsin.

To the Editor:—When you read reports of crop destruction through bad weather—drouth, hail and heat—bear in mind that it does not refer to Wisconsin. There is no satisfaction in the fact that the people who went to distant plains refused to take the advise we kindly offered to go to the fertile lands of Upper Wisconsin, but there is satisfaction in the fact that many acted upon that advice and are now owners of fine homes and at this time Upper Wisconsin has the attention of homeseekers almost to the exclusion of those arid plains.

One of the most interesting instances of homemaking that I know of in Upper Wisconsin and one that should appeal to those who would like to own farms is that of John W. Diedrich, near Ladysmith, in Rusk county. I knew him when he came to that place. He had been a carpenter at Oshkosh twenty-five years, during which he accumulated a family, which, with $400 to $500, he brought to what was to be their new home. The eldest of the family was a boy of eighteen years.

The land on which Mr. Diedrich settled was green cut-over land, of which he bought 160 acres. This was fifteen years ago. A log house was rolled up and made comfortable. There was no team or other stock aside from a flock of chickens at the start. It was a case of beginning from the bottom. What has Mr. Diedrich to show for the labor of these years?

I was there last month. From the 160 acres the boy has taken sixty acres and added twenty, from which he has made a splendid eighty-acre farm. The father has the remaining hundred acres and it is as pretty a farm home as you will find in the state. Fifty acres or more is fully improved, much of the remainder being in pasture. The log house has been replaced with an excellent home. A large hiproof barn, with silo and windmill, is a conspicuous feature in the building. Whether the senior's home is actually worth $10,000 or $15,000 I would not attempt to say—probably between the two figures—but he would not part with it for any thinkable amount.

I talked with the family in this happy home. I noted a little gasoline line engine supplied the power the women sometimes have to produce, and through an open door of one of the buildings I noted a "buzz wagon" that doubtless affords comfort and convenience to the family. The cattle were busy, but the pastures were beating them out. This is Upper Wisconsin in 1916. Thousands of others have done as well—many have made greater headway. A. D. Campbell.

Development Conference February 23d-24th.

Not "back to the farm," but "forward to the farm" will be the central idea at Wisconsin's first general land clearing assembly, to be held at Eau Claire February 23d-24th.

All agencies having power or ability to contribute to the development of Wisconsin's vast acreage of cut-over lands suitable for agriculture and stock raising will join in making this first state conference a success. Owing to its success in conducting the special land-clearing demonstrations throughout northern Wisconsin last year the college of agriculture has been asked to take the lead at this conference.

Two phases of the big problem will be touched upon at this meeting—the field or engineering side and the economic and community aspect of cut-over land development. Gov. E. L. Philipp has consented to speak on the subject, "An Empire in the Making."

Several thousand feet of moving pictures, showing farms in the making and taken from Wisconsin's stump land "battle front," will be shown at the conference. Bankers, lumbermen, farmers and state and county officials will be present. Methods of extending credit to new settlers on the cut-over land will be reviewed and discussed with the possibility of improvement where needed. The state press as a strong factor in aiding farm development will also be considered.

The utilization of "what the logger leaves" in the manufacture of by-products will be emphasized, as well as the importance of live stock to the farmer who wants to get results in a relatively short interval from his newly opened land.

KNOW YOUR ENGINE BEFORE YOU BUY!

"You are the judge or jury. Here are the facts."
—Wm. Galloway.

KNOW THE FACTS BEFORE YOU BUY!

My new 1917 book tells you the truth about heavy weight engines, about light weight engines, about four cycle engines, about two cycle engines, about high speed engines, about engines built to sell for a price—and about Galloway Masterpiece engines built **in our own factories** right here in Waterloo by Master engine designers and builders—their **heavy weight, large bore** and **long stroke**, low speed and genuine inbuilt durability and perfect service. My book gives bore, stroke, speed (RPM) and weight of every engine we manufacture.

All sizes, all styles at lowest prices. My 1917 model is a mechanical masterpiece from which it gets its name. It is a master-stroke in engine designing and building. Superior material, skilled workmanship, every part standardized, interchangeable and alike make it the peer of all engines on the market. Develops way above rated h. p.

The points mentioned in my engine talk No. 2 are only a few of its superior features. Large, heavy flywheels, Webster oscillating magneto supplies blue hot spark, needs no batteries. Make and break ignition, never misses fire, easily started, no cranking. Cylinder and water pot frost proof. Compare this 1917 Galloway Masterpiece engine size for size, bore, stroke, weight and low speed (which means easy running and long, satisfactory service), with any engine that is made anywhere, then be your own judge. Galloway engines are honestly rated, scientifically, accurately, handsomely built. Thousands of users testify to truth of my assertions. The Galloway Engine line is the finest, most complete, biggest value for the money on the market.

AW-6

GALLOWAY'S ENGINE TALK NO. 3

1. **Masterpiece connecting rods** have adjustable bronze bearings on both piston and crank shaft ends. Made from I-beam section steel—long and powerful, same type in all Galloway 1917 model engines. Note lock nuts that hold bearings firmly in position.

2. **Steel billet crank shaft,** turned out of a solid billet of steam hammered steel. These are the crank shafts used on our mogul size engines. Nothing better at any price.

3. **Perfectly balanced flywheels,** counter balanced like modern automobile motors. They mean true, even, steady running—no slap, side play or wabble. All Galloway flywheels are oversize.

4. **Gas tight piston rings** and perfectly fitted, machined, polished piston insure economy of operation. We build these in our own factory and **know** they are the best that can be produced. Note oil grooves on piston, and that wrist pin bearings are of the large wear-ever kind. You cannot afford to be without these up-to-the-minute features on your engine—and, remember, these modern ideas in scientific engine construction are found on Galloway engines.

These features and those contained in my engine talks Nos. 1 and 2, and many other features, fully described in my new 1917 catalog. Don't buy an engine of any make or kind until you have seen it. Please ask for it today.

Saw Rigs, Pumping Outfits, Grinders

All Sizes Every Style Stationary and Portable

Get This Free Book!

I want you to have this new book about Galloway Masterpiece engines. It tells you how to pick out, size up and judge an engine. Gives you engine secrets and facts. Tells why to insist on heavy weight, large bore, long stroke and low speed. Tells why we sell direct to farm or shop at wholesale. How to install an engine and hook up machinery. How Galloway engines are built. How to lay out and build a cheap efficient power house. Why our prices on high-class portable and stationary engines, saw rigs and grinding outfits are so low considering quality. This book will guide you to a saving of $250 or even more in fitting up a farm power house. That's why I want you to get it. Ask today. A postal gets it.

I MAKE IT EASY FOR YOU TO BUY A GOOD ENGINE. SIX LIBERAL SELLING PLANS—CASH OR TIME.

In addition to making the lowest prices a good engine can be sold for I allow you your choice of six liberal selling plans, which include every possible plan or terms of payment you could possibly ask for—practically your own terms.

My new book gives you complete information—get the book today—select the engine you want—choose the plan you want to buy on—CASH—PART CASH—PART NOTE—ALL NOTE—INSTALLMENT—BANK DEPOSIT etc., and I'll ship the engine at once. Besides, I will allow you to

TRY A GALLOWAY ENGINE ON ACTUAL POWER TEST WITHOUT EXPENSE TO YOU!

Free power test to satisfy yourself arranged if you desire. Our engines must prove to you in your own hands you to be the sole judge, whether or not they actually do everything we claim for them. My engine must stand on its merits. If you like it keep it—if it is not satisfactory fire it back to me and I'll PAY FREIGHT BOTH WAYS. Could any offer be more fair, more square, more liberal? It's simply a case of

YOUR MONEY BACK IF IT ISN'T THE BIGGEST ENGINE VALUE YOU EVER SAW!

Compare my engine with ANY ENGINE ON EARTH, whether it costs more or less. If you pay less for an engine than for a Galloway Masterpiece you could NOT POSSIBLY be getting as good an engine. If you pay more it would only be PAYING TOO MUCH. No matter what size or style engine you want I STILL THINK there in Waterloo is my own great chain of factories to fill every WANT. My 1 3-4, 2 1-4, 4 h. p. and other sizes are just as SCIENTIFICALLY DESIGNED, BUILT, MACHINED and FINISHED as my mogul engines from 12 to 16 h. p. What better proposition can you get anywhere? My engines are the best that can be designed, built of finest materials that can be procured. Sold at prices that barely cover actual cost and ONE small profit.

LOOK HOW THESE ENGINE TRUCKS ARE BUILT!

I build them in my own factories of the best material possible to buy, every truck put together by skilled mechanics, made of the highest quality steel. Steel I-beams, axles and channels, each one strong enough to hold up twice the weight of engine we put on them. The new book above describes every style and size of engine, gives its bore, stroke, shipping weight and other dimensions.

My $25,000 Bond PROTECTS YOU!

and every one of my customers and proves my willingness to have EVERY CLAIM and statement I make FULLY INVESTIGATED. I want you to TRY a Galloway engine on your farm—in your own shop! That's why I prepared my new 1917 special proposition. I want a Galloway Masterpiece 1917 model gas, kerosene or distillate engine in EVERY TOWNSHIP between NOW and APRIL 1st. Write me personally—now—today. I'll see that you get my wonderful book by return mail. You'll learn the truth about engines if you'll only let me tell you.

WRITE J. D. S. Hanson, Hart, Mich., for list farms in Co., where biggest crops grow. Fruit, grain, alfalfa, dairying.

GOOD man to take orders, clothes free, big money. Knickerbocker Tailoring Co., Dpt. 594, Chicago.

Ailing Animals.

Substitute For Milk.

Please advise me the ingredients, and amounts used of each, for a good milk substitute to mix with skim milk or water for young calves.

If skim milk is to be used, give in warm skim milk a small amount of corn meal and a tablespoonful of oil meal. If water is to be used, a good calf meal, which you may find advertised, may be a fair substitute for milk.

Stallion Poor Breeder.

I have a large two-year-old stallion, coming three. Last spring I bred ten mares to him and only got two in foal. Is there anything I can do to make him a surer breeder as a three year old? Oats, bran and mixed hay compose his ration.

The poor breeding qualities of your stallion may be due in part to being young. Feed him the best of feed, give plenty of feed and do not try to breed too many mares with him.

Swelling on Ankle.

I have a mare with a swelling just above the front ankle. One veterinarian blistered it and another bound it tightly; neither treatment having any effect. I think the swelling was caused by a sprain from slipping. Is there any way to take the swelling out?

You did not say whether the swelling was soft or hard and how long it had been there. If this swelling is not getting larger and not hurting the animal, we would advise you to just leave it alone.

Sniffles in Pigs.

I have seventy spring shoats and about ten of them have the disease known as sniffles where the nose of the pig usually turns sideways or draws up. The pigs that have sniffles are runty and do not amount to much. I would like to know how to stamp out the disease. If I get rid of the pigs that have it now, would my coming spring pigs be less apt to have it?

But very little headway has been made in eradicating this disease from the herd. About all that can be done is to provide good, clean quarters which are subjected to frequent sprayings with a disinfectant solution. It would be well to keep those affected away from the spring litters.

Bitter Milk.

I have a cow that will freshen on or about April 20th, her fourth calf. She gives bitter milk—not noticeable until after standing twenty-four hours. It is so bitter it cannot be used in cooking. She gives about five quarts daily. We feed six to seven quarts of bran a day in two feedings. She has good hay, eats well and seems in fine condition. We keep barn warm and clean. Shall be very glad if you can tell us what to give her.

It is hard to say just what is the cause of the bitterness of the milk, but it may be from something in the feed which is taken into the system and eliminated through the milk. Gradually change the feed, even the hay supply.

Western Guernsey Breeders' Meeting.

To the Editor:—The annual meeting of the Western Guernsey Breeders' Association will be held at the Park Hotel, Madison, Wisconsin, Friday, February 9, 1917, at 10 o'clock a. m. The program will be as follows:

President's Annual Address—H. W. Griswold, West Salem, Wis.
Reports and election of officers.
Address—Importance of culling and selecting in interest of continued general breed improvement.—J. R. Bent, Oglesby, Ill.
Lunch—$1.00 per plate.

The afternoon addresses by Mr. W. W. Marsh and Hon. W. B. Quarton, both of Iowa, and the discussion following will take up a number of topics and plans for breed promotion in the central West, the field covered by the work of this association. Our meeting at Madison last year was the best that we ever had and with the program for this meeting and present interest in the breed no breeder in this territory can afford to miss this meeting.

This will be during Farmers' Week at the University of Wisconsin, and Thursday is Dairy Day, with a fine program under the auspices of the Wisconsin State Dairymen's Association.

Charles L. Hill, Sec.-Treas.
Rosendale, Wisconsin.

It would take 115 trains of forty cars each to move Wisconsin's yearly supply of pork products.

THE FARMERS' MARKET

WANTED—FOR SALE—TO EXCHANGE

THIS department is to bring the buyer and the seller together. You may want help. You may have live stock, poultry and eggs, or machinery for sale. Maybe you want to sell or to buy a farm. Think how you can advertise now. Write your copy for the advertisement. The rate is six cents per word, each insertion. Note the low cost to reach our 90,000 circulation.

THE WISCONSIN FARMER MADISON, WISCONSIN

BUSINESS CHANCES.

FREE for six months—My special offer to introduce my magazine, "Investing for Profit." It is worth $10 a copy to anyone who has not acquired sufficient money to provide necessities and comforts for self and loved ones. It shows how to become richer quickly and honestly. Investing for Profit is the only progressive financial journal and has the largest circulation in America. It shows how $100 grows to $2,200; write now and I'll send it six months free. H. L. Barber, 509-28 W. Jackson Boulevard, Chicago.

HELP WANTED.

WISCONSIN Civil Service. Head Gardener wanted at the Waukesha Industrial School and for other places in the state service. Salary $75 or $55 and complete maintenance. Examination February 10. Address Wisconsin Civil Service Commission, Madison, for application blank.

WANTED—Good, reliable farm hand by the month or year. Good wages. Address, Joseph Scharpf, Rubicon, Wis.

SALESMAN WANTED.

SALESMEN wanted to canvas the farming and threshing trade, soliciting orders for Lubricating Oils, Greases and Paints. Excellent opportunity for right party. Previous experience unnecessary. Address at once The Victor Oil Company, Cleveland, Ohio.

CLOVER SEED FOR SALE.

CLOVER seed. Medium red clover seed, guaranteed free from foul or noxious weeds, @ $9.95 per bu.; new sacks 25c extra. Good, clean timothy seed @ $3.50 per bu. Order now before seed goes higher, from Reuter Bros., Carlos, Minn.

MONEY TO LOAN.

MONEY to loan on Wisconsin farms in amounts of $2,000 to $25,000. 6% with any pre-payment privilege desired. Addressed 206 Washington Bldg., Madison, Wisconsin.

PLYMOUTH ROCKS.

PURE-BRED Barred Rock cockerels. Write for prices. Rockwood Farms, Box 4700, Brookfield, Wisconsin.

DUROCS AND POLANDS.

TWENTY Duroc and Poland China sows, bred. Ten Poland China boars. Holstein bulls ready or service. E. G. Carpenter, Hortonville, Wis

EMPTY FEED BAGS WANTED.

HIGH prices paid for empty feed bags. Write for prices to Springfield Bag and Burlap Co., Springfield, Illinois.

HONEY.

HONEY, Delicious Pure Honey, 30-lb. can, $3.50; 60-lb. can, $6.60; 120 lbs., $12.60. Satisfaction guaranteed. E. B. Rosa, Monroe, Wis.

RHODE ISLAND REDS.

ROSE and Single Comb Dark Reds. Eggs $2.00, $3.00 and $5.00 per 15. Cockerels $2.50, $3.00 and $4.00. Fred Oertel, R. 3, Brighton, Ill.

WHITE FAVEROLLES.

WHITE FAVEROLLES, "4 in 1." Eggs, Beef, Beauty and fine feathers. Circular free. Todays Poultry Plants, Caney, Kansas.

FARM WANTED.

WANTED—Good farm, well located, direct from owner. Give description and price. N. Nuetzel, Box 754, Chicago.

JERSEY BULL.

JERSEY bulls ready for service. Fresh cows and heifers. L. R. Kuney, Adrian, Mich.

POSITION WANTED.

MARRIED man wants job on dairy farm. E. Allen, Bright's Estate, Owen, Wis.

FARM LANDS.

NORTH DAKOTA in all essentials; Soil, climate, crops, people, is a second Iowa. Because of heat, wet and rust the 1916 grain crop of North Dakota was short—yet government reports show $167,544,000 or $2,253 per average farmer. In last seven years average farmer in North Dakota produced $1,975 worth of crops; in South Dakota, $1,639; Iowa, $1,631; Illinois, $1,437; Minnesota, $1,396; Wisconsin, $901. Now is time to get North Dakota land, while price is low. No commission to us. Great opportunities open. Write for our direct dealing plan, booklets, maps, etc. J. S. Murphy, Immigration Agent, Soo Line Railway, 1272 Soo Bldg., Minneapolis, Minn.

$1,200 WILL handle this dandy 80. In Polk county, Wis., on Soo Line, 60 miles Twin Cities. Loamy clay soil, gently sloping surface to spring creek. Nearly 35 acres in field, 20 more cleared and balance fine hardwood timber. New, hip-roofed frame barn 30x50, 30x30 basement. Attractive frame house 16x24-14x16 and other good buildings. Drilled well, pump, steel windmill. On main road, rural route, only 2 miles creamery and store, 7 miles railroad town over first class roads through well settled country. A remarkable bargain, only $5,200. Get full particulars from Baker D-110, owner, St. Croix Falls, Wis.

BE YOUR OWN BOSS. Get a Farm Home in rich corn and clover belt in Northwestern Wisconsin along new Soo Line, 50 miles St. Paul, Minneapolis, near Duluth, Superior. Landseekers all say: "I saw nothing better." You'll like this wonderfully prosperous stock and dairy region too. Well settled but prices still reasonable. Rich soils, hardwood timber, plenty rainfall, healthful climate, beautiful lakes, fine schools. Creameries everywhere. Only 50 miles big markets. Improved or unimproved, $15 per acre and up. Investigate at once. MAP AND LIST FREE. Baker N-110, St. Croix Falls, Wis.

LANDOLOGY, a magazine giving the facts in regard to the land situation. Three months subscription, FREE. If for a home or as an investment you are thinking of buying good farm lands, simply write me a letter and say, "Mail me LANDOLOGY and all particulars FREE." Address Editor, Landology, Skidmore Land Co. 310 Skidmore Bldg., Marinette, Wis.

FOR SALE—3,000-acre stock farm, well equipped for the business; Colonial Home, one mile shipping station Illinois Central Ry., in foothills Mississippi. Price $25.00 acre; terms, third cash, balance 1 to 12 years, six percent. For further particulars see W. T. Pitts, The Land Man 1449-50 Bank of Commerce Building, Memphis, Tenn.

FOR SALE—205-acre, all improved, level farm in west central Wisconsin. Ideal dairy farm. Two miles from good market and high school. Reason for selling—to close an estate. For further information Phone 2301 (Madison), or write T. N. Halvorsen, Dallas, Wis.

THE Earnest Homeseeker is the man I want to hear from. I can save him many dollars on his purchase of a farm. All such please write promptly to Arnold, Land Agent, Rock Island Ry., 153 Wolvin Bldg., Duluth, Minn.

GOOD 40 ONLY $300. No. 1031-M; clay loam soil; ½ somewhat low; balance gently rolling, firewood and small brush; easy to clear; 1½ miles from school; all cash; The Ev. Luth. Colonization Co., Dept. 10, Merrill, Wis.

BLUE Grass Dairy Farms, Northwest Missouri 160 acres, improved, $55 per acre. 120 acres improved, $75 per acre. Many others. Write us what you want. Gill & Ryan, Chillicothe, Mo.

FORTY or eighty acres, fair buildings, clay loam soil, no waste land, close to town. $30 per acre. $200 down, balance long time. Frank M. Doyle, Ladysmith, Wis.

FOR SALE or exchange for wild land in southwestern Nebraska, live stock farm of 760 acres 2½ miles from town. Write Albert Ferdon, Pittsville, Wisconsin.

HAVE two farms for sale on easy terms, or I will rent them to right parties by cash or grain rent. M. A. Peoples, Ladysmith, Wis.

WANTED—Wisconsin farm for 160 acres rich land near Las Vegas, New Mexico. Value $1,680.00. H. A. Snyder, Minooka, Ill.

FOR SALE—80 acres, 2miles from Barron, no buildings, 30 acres cleared, all fenced. Easy terms. Elmer Rockman, Barron, Wis.

SUNNY south, free views 160 valley farm, fruit, spring, $2,500. Terms. Arthur's, Mountain View, Mo.

Canada's Liberal Offer of Wheat Land to Settlers

is open to you—to every farmer or farmer's son who is anxious to establish for himself a happy home and prosperity. Canada's hearty invitation this year is more attractive than ever. Wheat is much higher but her fertile farm land just as cheap, and in the provinces of Manitoba, Saskatchewan and Alberta

160 Acre Homesteads Are Actually Free to Settlers and Other Land Sold at from $15 to $20 Per Acre

The great demand for Canadian Wheat will keep up the price. Where a farmer can get near $2 for wheat and raise 20 to 45 bushels to the acre he **is bound to make money**—that's what you can expect in Western Canada. Wonderful yields also of **Oats, Barley and Flax. Mixed Farming** in Western Canada is fully as profitable an industry as grain raising.

The excellent grasses, full of nutrition, are the only food required either for beef or dairy purposes. Good schools, churches, markets convenient, climate excellent. Military service is not compulsory in Canada but there is an unusual demand for farm labor to replace the many young men who have volunteered for the war. Write for literature and particulars as to reduced railway rates to Supt. of Immigration, Ottawa, Can., or to

GEORGE A. HALL,
123 Second St., Milwaukee, Wis.
Canadian Gov't Agt.

A SMALL farm in California will make you more money with less work. You will live longer and better. Delightful climate. Rich soil. Low prices. Easy terms. Sure profits. Hospitable neighbors. Good roads, schools, churches. Write for our San Joaquin Valley illus. folders, free. C. L. Seagraves, Ind. Com'r, A.T.& S.F.Ry., 1959 Ry. Ex., Chicago.

FOR SALE A 135-acre farm near Jefferson, Jefferson county, Wis. The farm is ½ mile from condensery, two creameries and railroad station; an elegant place for the cattle business, pure-breds or grades; the dairy center of the world. Priced to sell. E. H. Kiesling, Jefferson, Wisconsin.

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

J. C. Hendricks Has the Goods.

THOSE that attended the J. C. Hendricks Poland China sale at Hazel Green, Wis., last winter, know that it was "some show." They were good enough for the critical at that sale and those that will be sold on February 15th are of equal quality and in some respects better than the previous offering. The feature of this sale will be the valuable blood lines represented. The get of fifteen or twenty of the most noted boars of the Poland China breed will be sold on the above date. No matter what line of breeding you have you will have an opportunity to buy [illegible] not related [illegible] ur herd. If [illegible] isement on [illegible] will see the [illegible] any Poland [illegible] ended con- [illegible] more popular breeding? It is practically useless to say anything about the individuality for J. C. doesn't catalog the poor ones. The writer has attended the "big noise" sales in Iowa and, of course, some great Poland Chinas have been sold, yet individually they were on a par with those that J. C. will sell on February 15th. We do not expect Mr. Heudricks to make the average that some of the Iowa sales do, but he has the goods and the breeders and farmers that want the good ones can well afford to attend this sale. The offering has been bred to Smooth Price, a big-type boar with a world of quality that weighed 910 pounds when twenty-three months old. The fact that sows bred to him averaged $90 in the 1916 sales shows what the breeders think of him. Some have been bred to Black Chief, an excellent individual. Northside Wonder is an 800-pound two-year-old that has made good as a sire. J. C. Hendricks has made Poland history. Owned Big Bug, the greatest breeding boar ever owned in the state. He bred the sire of the champion, Mac's Chief. The sire and dam of the 1,100-pound, Black Jumbo. He bred Giant Uhlan, the Dawson boar, the sire of winners in Nebraska, Missouri and Kansas, also the junior champion sow at Omaha. In the next issue we will give the list of some of the noted herd headers that have been produced on the Hendricks farm. Just at this time we want you to get the catalog. It is full of Poland China history that will be of interest to you. If you can't attend send mail bids to T. P. Shreve in care of Mr. Hendricks. Catalogs will be sent on request only. See page 37.—Adv.

Timm Wonder—Chris Kartman—Giant Wonder.

THE above is the combination that will welcome you at Cassville, Wis., Friday, February 16th, the day that Chris Kartman sells forty head of bred Poland Chinas. Mr. Kartman will do everything in his power to make your stay pleasant. He will put up a sale offering that you need not be ashamed to bid on, and, as far as entertainment goes, he'll see to it that you get the best there is in the town. Timm Wonder is the spring boar that appeals to the big-type breeders. When you see this boar you will want one or more of the sows that are bred to him. Giant Wonder is another good one, but of a little different type. Some of he visitors may prefer to have their sows bred to the latter boar. They are both good hogs and you will make no mistake in getting a litter by either one. There is a good sow in the sale sired by Big Orange. Another one of the big sows traces back to old Mouw's Jumbo. Three that trace to Big Bone will appeal to many that attend the sale. In 1 st week's issue we called attention to the get of Monster Big Bone. Pay special attention to the gilts in the sale sired by him. You should arrange to take in the Grant county sale circuit. Some of the greatest sows to be sold this winter can be found in these sales. Start with the combination sale at Lancaster on the 13th. From there go to Ed Hendricks at Hazel Green on the 14th, then on the 15th J. C. Hendricks sells at Hazel Green, and from there the railroad connections are good for the Kartman sale at Cassville on February 16th. Cassville is only a couple of stations up the river from East Dubuque, about half way between the last mentioned town and Prairie du Chien on the Burlington railroad. Write at once for the catalog and please mention The Wisconsin Farmer. Send mail orders to T. P. Shreve in care of Chris Kartman, Cassville, Wis. See page 38.—Adv.

Guernsey Breeders—Attention!

IT IS seldom that a tried sire that has made good in a leading herd is offered for sale, yet sometimes conditions necessitate a change. At this time Fox Bros., Waukesha, Wis., are offering a tried sire that has been used successfully in their good herd, and here is a grand opportunity for some breeder to get a herd bull whose worth is known. The bull for sale is King Talladenn of Chestnut Hill, dropped June 23, 1908. If you will notice the advertisement that appears on page 35 of this issue, you will appreciate his breeding. The sire, Skeezicks, is out of Yeksa Lind, A. R. 650.56. The dam, Talladeen, A. R. 633.50, is by Dan Patch, sire of ten A. R. daughters. This bull has a wonderful pedigree and as an individual he was good enough to win first and grand champion at the Michigan State Fair, and first at La Crosse and West Michigan fairs. You get individuality and breeding in a bull of this caliber. The Guernseys on the farm sired by this bull will convince you that he would prove to be a valuable asset in your herd. If you want some young bull calves—six to eight months old—or if you are interested in the excellent bull mentioned above write Fox Bros., Waukesha, Wis., and please mention The Wisconsin Farmer.—Adv.

Gant's Farm Has Wonderful Duroc Offering.

WE HAVE heard of the Gant Duroc Jerseys for some time, but only recently has it been our pleasure to inspect this herd and the offering that will be sold February 15th. Right now we want to say that Durocs will be sold from the Gant farm on the above date that are second to none that will be sold in Wisconsin this winter. The demand at the present time is for sows with extreme stretch and that is the feature of this offering. The popular breeding at this time is the Cherry Chief strain and Mr. Gant has more of that than any breeder in Wisconsin that will hold a sale this winter. All breeders that make a study of mating know that some cross will "nick" while others will not. Mr. Gant has the right "nick," in crossing the get of the Cherry Chief boar with the get of a son of Illustrator. This gives him a combination of size and quality hard to duplicate. Mr. Gant buys good sows of the most popular blood lines and Wisconsin breeders can well afford to buy some of the Gant Durocs and in that way "tone up" their herds. The feature of the sale will be a yearling sow that is bred to Pathfinder. She is sired by a son of Illustrator out of a daughter of Crimson he by Uneeda Crimson Wonder, said to be the best son of Crimson Wonder Again. Sows bred to Pathfinder so far this winter have averaged over $200. What will a litter by Pathfinder be worth next spring, and this sow has raised two litters so it is safe to say that she will raise a good litter. Buy this sow and her litter will put you on the Duroc map in Wisconsin. The gilts in the sale sired by Gant's Farm Cherry Chief are outstanding in every respect. They will weigh from 350 to 375 pounds, have great arched backs with good feet and pasterns. Mr. Gant has twenty gilts as good as we have seen this year and we have seen the good one in four states. The breeders and farmers of Wisconsin do not appreciate the good Duroc Jersey herds in this state, though they would be missed and the state would be the loser if the owner should stop breeding registered swine. This offering is worthy of your presence. Put the date down as one of the sales that you are going to attend. Remember the date, Thursday, February 15th, at Delavan, Wis. Railroad connection is good from any direction. There is not a "cold" pedigree in the catalog. Get one and if you can't attend send a bid on one of the good gilts or the sow bred to Pathfinder. Please mention The Wisconsin Farmer when writing. See page 34.—Adv.

The Bunker Polled Durhams.

IF YOU want a good Double Standard Polled Durham bull, F. S. Bunker, Kilbourn, Wis., has seven from eight to fourteen months old that will give satisfaction. He has a dark red eleven month old bull that is outstanding and he would make a creditable showing if fitted. His dam is large and is a heavy producer at the pail. Another good one is a thirteen months old roan with plenty of size and quality and bred in the purple. Good enough to head the best registered herds. Bunker has one of the best, if not the best, Polled Durham herds in the Northwest and if you want good cattle write him. See page 34.—Adv.

An Opportunity For Short-horn Admirers.

NO TIME in recent years has there been the demand for the Short-horn that there is at the present time. This has not been caused by a boom of any kind but the supply and demand has made this condition possible. The last census showed that the population of the United States has increased about 33 per cent, beef about 30 per cent, consequently the supply is less than the demand, this alone should be convincing that beef products will be high for years to come. In looking forward we must consider the war, and when that ceases there will be the greatest demand for American meats ever known. Argentine is the only country in the world that has a surplus of beef animals and owing to the prevailing hoof-and-mouth disease in that country, their products will not command the premium that American meats will. All of Europe will want breeding stock, the breeding herds have been depleted to feed the armies. We can see but one answer—buy American breeding stock and beef products. Is the American farmer preparing for the future? Now is the opportune time to produce beef. If you are interested in Short-horns attend the combination sale to be held in Madison, Wis., Thursday, February 15th. Fifty-two head have been consigned to this sale from the leading Short-horn herds of the state. There will be about forty females from yearlings to matured cows and some future show animals are among the lot. Females of the most popular breeding. This will be a grand place to buy a herd bull, as some outstanding individuals have been listed. You will see by the advertisement that appears on page 34 of this issue, that the most prominent breeders of the state have listed cattle. This will be an advertisement for their herd and it behooves them to send the best. A wonderful lot of cattle will be sold and this will be your opportunity. The catalogs are now ready. Get one, study the blood lines and plan now to attend this great event. The cattle will be judged the morning of the sale by C. J. McMaster, a prominent breeder of Illinois. At night there will be a big banquet. Come and enjoy yourself and get enthused over the possibilities of the Short-horn cow. Write to J. L. Tormey, secretary, College of Agriculture, Madison, Wis, for a catalog. Please mention The Wisconsin Farmer.—Adv.

NEXT WEEK'S SALE PROGRAM

Monday, February 5	Chester Whites, Cook-Scheibe-Vaughn, Burlington, Wis.
Tuesday, February 6	Poland Chinas, M. Madson & Sons, Madison, Wis.
	Poland Chinas, P. W. Young, Prosper, Minn.
Wednesday, February 7	Poland Chinas, J. F. Diley, Sec'y, Madison, Wis.
	Duroc Jerseys, John D. Gant, Sec'y, Madison, Wis.
Thursday, February 8	Duroc Jerseys, P. V. Kuhn, Sec'y, Janesville, Wis.

Last Call For Madson & Sons' Sale.

DON'T forget the Madson & Sons, sale of Poland Chinas that will be held at Madison, February 6th. They will sell forty head of yearling sows and spring gilts and it is an offering that any breeder might be proud of. Few sales of the season will contain individuals with more quality, animals of easy-feeding characteristics and they have been bred to big-type boars. Good sows of any breed are in demand—this has been demonstrated at the various sales that have been held this winter. Pork products are high and there is no reason why prices will not remain on a high level and the man that will buy a few good sows at the winter sales will be well repaid. The Madsons are selling a lot of sows and gilts that will be money-makers. The sows that have gone out from this herd in the past have made good—raised good litters and have made money for their buyers, they will do the same thing this year. The fact that Mr. Madson is one of the "old timers" as a Poland China breeder in the state of Wisconsin and enjoys the reputation for honesty and integrity. This fact alone should be very valuable to the man that wishes to make a start with pure-bred swine. As mentioned before, this sale will be held during "Swine Week" and precedes the combination sale to be held in Madison February 7th. Arrange to attend "Swine Week" and the two Poland China sales. If you haven't received your catalog, write for same at once. If you can't possibly attend this sale send buying instructions to H. S. Hoard, field man for The Wisconsin Farmer, who will attend this sale. Remember the date and place. See page 34.—Adv.

Remember the Grant County Sale, February 13th.

BREEDERS and farmers alike should attend the sale of bred Poland Chinas that will be sold by the Grant County Poland China Breeders' Association, at Lancaster, Wis., Tuesday, February 13th. "There is a reason"—the breeders should attend and get acquainted with some of the livest Poland China men in the state, your own business interests will suffer if you are not at this sale. The farmers should atttend, for sows will be sold equal to any that will be listed in the winter sales. We have predicted for some time that good breeding stock would be in demand and the public sales so far this winter bear us out in this prediction. The writer has just returned from a three weeks' trip in Minnesota and Iowa, attending Poland China and Duroc Jersey sales and the good sows are in demand. The farmers and small breeders were the heavy buyers which shows conclusively that they appreciate the value of good breeding stock in the West. Wisconsin needs more and better hogs than Iowa. Wisconsin has Poland Chinas as good as they have in Iowa, but the breeders and farmers of this state have not been educated to appreciate the good breeders that are trying to build up the swine industry in Wisconsin. Again we want to make the statement that now is the time to buy breeding stock. Forty-five head of sows and gilts have been listed for the Grant county sale—every one a good one. There will be gilts sold in this sale, that, if carried along will make a creditable showing at the fairs this fall. They have been bred for March and April farrow to some of the best boars in the state. You will make no mistake if you buy at this sale. Those consigning to this sale are Chas. Flesch. Thos. Holmes, Frank Renalde, Frank Morehouse and Dobson & Eastman—a better bunch of fellows never made a sale. They ask your support and will give you value received. Get a catalog and notice the array of breeding contained therein. T. P. Shreve, field man for The Wisconsin Farmer will gladly handle your buying orders. Write him in care of Burlie Dobson, Lancaster, Wis. Write for the catalog, and please mention The Wisconsin Farmer. See page 35.—Adv.

Cook-Scheibe-Vaughn Sale.

A CHESTER WHITE swine sale will be held next Monday. February 5th, at Burlington, Wis. The sale will be held in the city at Gill's Livery and starts at 2 p. m. There will be forty head of fall and spring gilts sired by Great Wonder 29377 by White Eagle, Chief of Doolittle breeding; Great Scott 31749; Wildwood Prince 2d 32953 by Wildwood Prince, grand champion at Iowa, 1915; Highland John 28113, won second at Minnesota State Fair, he by Highland Chief of Barr breeding; Eagle Chief 28291 by White Eagle Chief; Model Prince 30329, Scherer's noted herd sire; Right Kind 27479 by Elmo Jr., which won four grand championships at Illinois, Peoria, C. A. Andrews breeding. They are bred to Prairie Chief 40303 by Eagle Chief; Perfect Prince 37749 by Model Prince; Guy Comet 40591 by White Prince, out of a daughter of Comet; Post Vaughn 39405 by Post 3d, Harding's noted boar and out of a Una Again dam; Cedar Lawn Chief 40305 by Eagle Chief. Winnings of Perfect Prince, undefeated at five shows including Wisconsin State Fair and Perfect Chief won three firsts. The gilts are the tops of these three good herds that during the past season won forty-seven first, thirty-five second, seventeen third and seven fourth prizes and two sweepstakes and two grand championships in 1916. Make your plans to attend this sale. Out of town buyers will be entertained free of charge at the Burlington Hotel. If you can't possibly be there send mail bids to the auctioneer, C. C. Evans, or field man for The Wisconsin Farmer, H. S. Hoard, in care of Burlington Hotel. Send to W. C. Scheibe for catalogs. When writing kindly mention The Wisconsin Farmer. See page 38.—Adv.

Great Demand For Registered Swine.

FROM January 2d to January 20th, T. P. Shreve, field man for The Wisconsin Farmer attended fourteen sales of registered swine, Duroc Jerseys and Poland Chinas, in Minnesota, Iowa and South Dakota. In all 757 hogs of the two breeds were sold at an average of $77.12. The highest average was $139 and the lowest, $43. We simply mention this to show that the swine business is on a substantial footing and there is a keen demand for well-bred hogs of any breed. Incidentally we might mention that Mr. Shreve purchased nineteen sows in these fourteen sales for breeders that could not attend in person. The Wisconsin Farmer and its field men are doing all they can to stimulate more interest for better swine

Field Men for The Wisconsin Farmer.

H. S. Hoard, eastern half of Wisconsin. Address Room 201, Washington Building, Madison, Wis.

T. P. Shreve, western half Wisconsin and eastern Minnesota. Address Room 201, Washington Building, Madison, Wis.

Fred V. Johnson, Wisconsin, Illinois, Indiana, Ohio, Michigan and Kentucky. Address 924 Hearst Bldg., Chicago, Ill.

Carlos C. Palmer, eastern half of Iowa and Minnesota and swine division in Illinois. Address 2714 High St., Des Moines, Iowa.

W. S. Steele, northwest Iowa, South Dakota, western Minnesota. Address Box 109, Sioux City, Iowa.

A. T. Cole, Missouri. Address 3900 Holmes St., Kansas City, Mo.

in Wisconsin. During the next month Mr. Shreve will attend all hog sales to be held in Wisconsin. His services are at your command if you wish to make purchases at any of the coming sales. Write him at Madison, or in care of the breeder holding the sale.—Adv.

Last Call For Hendricks, February 14th.

REMEMBER the day of days will be Wednesday, February 14th, for on that date E. W. Hendricks will sell forty of those great Poland China sows at Hazel Green, Wis. For the benefit of those that are not posted, will say that Hazel Green is about ten miles north of Galena, Ill., on the Galena-Madison division of the Northwestern. We will mention a few of the attractions: Five gilts by Black Jumbo out of Big Maid 2d by Big Bug. Some of the best gilts to be sold this year. Three that will tone up any herd are by Big Oakland out of Half Ton Mollie (sells in sale). Three by the noted Smooth Price out of Big Irene by Repeater. Two by Big Crow Wonder, Crow's Kind-A Wonder breeding. There are two fall yearlings by Black Jumbo out of a Big Henry Ex., dam, that are good ones. Peerless Wonder was by A Wonder, and he is the sire of a couple of yearlings that are out of a Big Bug dam. Remember that Big Bug was perhaps the best sow sire ever owned in Wisconsin. Something attractive is a yearling by Big Martin he by Big Tom, dam by King of Wonders. Smooth Daisy is a spring yearling, a half sister to Smooth Price. If you want a good tried sow, buy King's Lady by King Jumbo. She will weigh right at 850 pounds. When you get to the sale look at the sows in the sale sired by Peerless Wonder. Don't forget that the entire offering is bred to the two boars, Black Jumbo and Model Major 2d. You need not worry about the individuals, they are as good as any breeder has. Get the catalog and you'll get some idea of the offering. This sale follows the combination sale at Lancaster, Wis., and precedes the J. C. Hendricks sale. Attend all sales—every one is a good one. T. P. Shreve will represent The Wisconsin Farmer and mail bids should be sent to him in care of Mr. Hendricks. Notice the advertisement that appears on page 36. Write for a catalog and mention The Wisconsin Farmer.—Adv.

Orion Cherry King, Jr., the Champion.

ORION CHERRY KING breeding is the most popular at the present time, because sons of this boar head the best herds in the country and one of his sons was the grand champion boar at the greatest swine show ever held in the world—the National at Omaha. E. H. Parker & Son, Janesville, Wis., have the only son of Orion Cherry King Jr., the Omaha champion, that we know of in Wisconsin or Minnesota. On February 8th the Parkers will sell twenty yearlings and gilts in the combination Duroc sale to be held in Janesville. The gilts are yearlings are good, they will please you, and, as most of them have been bred to King Orion you will have a valuable litter next spring. Arrange to attend this sale. It follows the association sale at Madison and you should attend both sales. Write the Parkers for a catalog; it contains valuable information. See page 34.—Adv.

Water-Proof Shoes.

A PAIR of work shoes that are really manure and water-proof shoes, that last long and don't leak, is a boon to the farmer. Wilson, the Water-Proof Shoe Maker, 2373 Milwaukee Ave., factory, Chicago, is manufacturing shoes to meet this need. In order to convince the farmer that his shoes will do what is claimed for them Mr. Wilson will send a pair of Hy-D-Rubber-Wood sole shoes without a cent in advance, so that the farmer may inspect them before paying, and if they are not satisfactory may return the shoes at the factory's expense. Read Mr. Wilson's advertisement on page 17 and send the coupon calling for a trial pair of these water-proof shoes. Mention that you read the advertisement in The Wisconsin Farmer.—Adv.

See King Defender at Madison.

KING DEFENDER, the grand champion Duroc Jersey boar of Wisconsin will be on exhibition in Madison during Swine Week. He will no doubt appeal to you as he does to others and you will want a sow or a gilt bred to him. On February 8th the day following the association sale at Madison, John L. Fisher, the owner of King Defender, will sell fifteen head of sows and gilts in the combination Duroc sale to be held in Janesville. Most of these sows are carrying a King Defender litter and it will be no trouble to sell boars or gilts sired by this grand champion next spring. Arrange to attend this sale. Write to John L. Fisher, for a catalog and mention this paper. See page 34.—Adv.

A More Convenient Incubator.

THE "Old Trusty," manufactured by the M. M. Johnson Company, Clay Center, Neb., is an incubator built with a view to reducing the poultry raiser's labor to a minimum. It gives large hatches with so little work that it may be classed as a real work-saver. Read the advertisement on the "Old Trusty" on page 13 and write to the company for a copy of their new book telling how Old Trusty owners make big money making hatches in coldest weather. Mention that you read the advertisement in this paper.—Adv.

First Aid to Live Stock.

SCRATCHES, cuts and wounds may prove serious to your cattle and horses if not properly treated. Corona wool fat compound applied to these wounds has wonderful healing qualities. It does not burn or blister, leaving ugly scars, but heals the wound without a scar. Read the advertisement on page 40 and write to the Corona Manufacturing Company, 44 Corona Block, Kenton, Ohio, for a sample box of this famous healing compound and a copy of the booklet, "How to Treat Wounds, Sores, etc." Mention that you read the advertisement in this paper. See page 40.—Adv.

Live Stock Guide.

THE International Live Stock Guide has recently been issued and a copy has come to our attention. This book contains a large amount of useful information relative to the breeding, feeding and care of horses, dairy and beef cattle, swine, sheep and poultry. The information is gotten up in a convenient form so that anyone may take the common live stock diseases or problems and easily secure the views of well-informed writers upon these subjects. For instance, the introduction of the section devoted to the horses is written by John L. Hervey, Editor of the Horse Review. The first twenty pages of the book are devoted to pointers for horse owners. This book tells a number of things to observe when buying a horse; how to throw a horse; treatment of mare at foaling time; how to cool off a horse; how to keep a horse from pawing; care of the horses' teeth and scores of other important matters in connection with the care of horses. The same general plan is carried out in the section devoted to the dairy cow and to beef, swi e and sheep. The dairy section contains some interesting dairy rations, which may be tried with profit by some of our readers. Also the common diseases of cattle are discussed with recommendations. It would take too much space to explain all that will be found in this book relating to the various divisions of live stock on the farm. This is the book mentioned in the International Live Stock Company's advertisement which appeared last week. We recommend that our readers write to the International Stock Food Company, Department W. F., Minneapolis, Minn., and get this book. The live stock guide also contains a historical sketch of Dan Patch 1:55. Dan Patch died July 11, 1916, and the next afternoon he was followed by his owner, M. W. Savage. In each case heart trouble was the cause of death. Mr. Savage was known all over the world as the owner of the fastest horse in the world. The history of Dan Patch as given in the International Live Stock Guide is very interesting. Please mention The Wisconsin Farmer when you write for a copy of the International Live Stock Guide.—Adv.

The Ironclad Incubator.

AN incubator that has won in two great hatching contests should be worthy of serious consideration by every poultry breeder in need of a new incubator. That is the record of the Ironclad, manufactured by the Ironclad Incubator Company Box 100, Racine, Wis. It is offered to any reader of this paper on thirty days' free trial. The 150-egg size, together with a 150-chick brooder, are offered for only $11, putting them in reach of every farmer. Read the advertisement on page 14 and write the company for a copy of their free catalog explaining the Ironclad incubator. Mention that you saw the advertisement in this paper.—Adv.

Incubator Much Improved.

THE new 1917 model X-Ray incubators and brooders include twenty new improvements which add a great deal to their efficiency. The new features insure greater hatches of sturdier chicks. The price of the new improved incubators and brooders remains the same, so that the farmer who buys one of the new models is getting a real bargain for his money. Read the X-Ray advertisement on page 14 and write the X-Ray Incubator Co., Box 42, Des Moines, Iowa, for a free copy of their 1917 book telling all about these n w improvements. Mention that you read the advertisement in this paper.—Adv.

The Faultless Stump Puller.

THE Faultless stump puller was well named, for it has accomplished some very unusual records. So sure are the manufacturers that this stump puller will give satisfaction that they give ten days' free trial of the stump puller, and guarantee the machine and cable against breakage for one year. Read the advertisement of the Faultless on page 19 and write the manufacturers, the Faulless Stump Puller Company, Dept. W, Cresco, Iowa, for their special low price on complete outfit and free book on clearing stump land. Mention that you saw the advertisement in this paper.—Adv.

A Champion Incubator.

THE world's champion Belle City incubator is manufactured by the Belle City Incubator Co., Box 106, Racine, Wis. The incubator can be obtained for $8.55 and may be obtained for ninety days' trial. Readers of this paper can get a copy of the valuable booklet "Hatching Facts," free by writing to the company. See the advertisement on page 15 and mention that you read it in this paper.—Adv.

Clydesdale Horses.

IT WILL soon be time to think about a stallion for your own use or one to place in the stud. If you favor the "Clyde" don't overlook the Van Etta Clydesdale Stud, Lime Center, Wis. He has some outstanding stallions that are for sale at reasonable prices, quality and show yard winnings considered. Ayrshires of the highest caliber are also raised on this farm. If interested in the above breeds write Jas. Van Etta at the above address. See page 37.—Adv.

More Money From Hogs.

THE hogs that are kept in the best condition will make the most money for their owner. That's what Hog-Tone, made by Avalon Farms Company, 612 Rand McNally Bldg., Chicago, does for them. It is a liquid worm killer and hog conditioner that does wonders in helping hog health. Read about Hog-Tone and what it has accomplished in the Avalon Farms advertisement on page 9 and write the company, or send them the coupon calling for a free sample of Hog-Tone so that you may see for yourself what this treatment may do for your hogs. Mention that you read the advertise. ent in this paper. See page 9.—Adv.

AN interesting feature of the Maule seed book for 1917 is the explanation of the Maule seed tests to insure the germination of all Maule seeds. This practice of testing the seeds and rejecting those which do not measure up means increased crops and larger returns for the farmers. Readers of this paper may obtain a copy of the 1917 Maule seed book, containing 176 pages of illustrations, prices and descriptions, is sent free on request, by William Henry Maule, Inc., 2146 Arch St., Philadelphia, Pa. Tell them you saw the advertisement in this paper.—Adv.

IT will soon be time to be thinking about what garden and flower seeds will be needed this spring. Seeds that are northern grown and, therefore, strong in vitality are best for the Wisconsin farmer. The northern-grown seeds can be obtained from the J. W. Jung Seed Company, Randolph, Wis., whose advertisements are appearing in The Wisconsin Farmer. Any reader of The Wisconsin Farmer can obtain their big free catalog for the asking. When writing for it tell them that you saw the advertisement in The Wisconsin Farmer. See page 22.—Adv.

JOHN H. BEAR & SON, Spring Green, Wis., have a select herd of Shorthorn cattle. They do not have a large herd, but the few they have are good and well cared for and are excellent producers. They offer bulls for sale that are well grown and ready for immediate service and they are sired by good Scotch bulls out of heavy milking dams. We gladly recommend the Bear Short-horns to any prospective buyer. Please mention this paper. See page 34.—Adv.

SALE DATES.

Feb. 26, George W. Pagel, Zumbrota, Minn.

Rock County Holstein Meeting.

The Rock County Holstein breeders met in the city hall in the city of Janesville on the 18th day of January. There were thirty-six breeders in attendance and a permanent organization was formed, constitution and by-laws adopted and officers elected. It was decided to hold another meeting on the 27th day of February, at which time Mr. W. J. Kittle, secretary of the Chicago Milk Producers' Association, will give an address to which all dairymen will be invited. Mr. Kittle will speak on the subject, "Marketing Milk." He is a splendid speaker and we are looking for a very fine meeting.

At the election of officers Mr. H. J. Bemis, of Hanover, Wisconsin, was elected president; Mr. John W. Jones, of Milton Junction, Wisconsin, vice president, and John L. Fisher, of Janesville, Wisconsin, secretary, and Wallace Hoey, Milton Junction, Wisconsin, treasurer.

An executive committee consisting of the president, secretary and treasurer, Mr. W. C. Huginin, of Janesville, and Mr. Harold Ward, of Avalon, was appointed to look after the association business.

The association started out with over thirty members and an active canvass will be started to increase the membership. It is the aim of the association to have one of the very largest county associations in the northwest, and a very large attendance at the next meeting on February 27th.

Cow-Testing Convention.

The annual convention of Wisconsin cow-testing associations will be held at Madison, February 5th to 8th. The speakers who will give special attention to this subject are Louis Bober, of the Buena Vista association; Secretary Richard F. Adams, of the Stanley association; Geo. L. Moss, of the Waupaca association; F. W. Drage, of the Geneva association; H. F. Brant, East Troy association; F. A. Gaiser, Wrightstown association; F. L. Cuenot, Alta association; C. M. Rydberg, Shawano association; W. K. Anderson, Menomonie association; A. O. Follette, Waukesha association; M. H. Duel, Fond du Lac assoriation; A. R. House, Winnebago association.

Those who attend the meeting of this association will also have an opportunity to hear addresses by H. L. Russell, director of the agricultural experiment station; Math Michels, president of the Wisconsin Dairymen's Association; H. E. Young, of the United States Department of Agriculture; Dr. A. S. Alexander; W. E. Meyer, of Salt Lake City; Joel Winkjer, of the federal department of agriculture; A. J. Glover; C. H. Eckles, of Missouri; A. W. Hopkins, of Madison, and a number of Wisconsin State Experiment Association workers.

Live Stock Recommendations.

At a recent meeting at the Wisconsin Live Stock Breeders' Association, held in Madison, the following resolution was adopted:

Resolved, That the Department of Agricultural Economics of the university be invited to make an investigation of marketing conditions with a view of providing information to the farmers of Wisconsin as to the best methods of fitting, shipping and selling live stock, and that we pledge our efforts to assist in such investigation.

It is expected that this work will be begun at once.

President Broughton appointed a committee consisting of W. L. Houser, Buffalo county; J. P. Riordan, Dodge county; J. W. Martin, Richland county; W. F. Renk, Dane county, and J. C. Robinson, Rock county, to co-operate with other agricultural bodies and organizations in presenting to the members of the legislature some of the urgent needs for the development of Wisconsin's agriculture.

A committee consisting of J. P. Riordan, Dodge county; C. L. Hill, Fond du Lac county; J. W. Martin, Richland county; L. A. Wright, Columbia county, and H. C. Taylor, Rock county, was appointed to make a study of all proposed legislation on the control of bovine tuberculosis and to make definite recommendations to the members.

Choice Short-horns from Wisconsin's leading herds

Will Be Shown and Sold

THURSDAY, FEBRUARY 15, 1917

In University Stock Pavilion at Madison, Wisconsin

52 HEAD--39 Females, 13 Bulls--52 HEAD

Consignments from the following herds:

Anoka Farms, Waukesha
G. D. Arnold, Galesville
H. B. Drake & Son, Beaver Dam
Griswold Bros., Livingston
Herr Bros. & Reynolds, Lodi
E. E. Jones, Rockland
R. Mauer & Sons, Fox Lake
Chas. Pengilly, Dodgeville
Carpenter & Carpenter, Baraboo
W. J. Bernd, New Richmond
D. H. Grady, Portage
Fox & Gallagher, Oregon
John Howie, Waunakee
Williams Bros., Bangor
H. Padden, New Richmond

It is only natural that these breeders would not consign poor animals—it would be a detriment to their herds. **A choice lot. Plan to attend.**

There will be a **show** at 10 a. m. Judge, C. J. McMaster, Altona, Ill. Carey M. Jones and Theo. Martin, auctioneers. Write for catalog to

J. L. TORMEY, Sec'y

College of Agriculture **Madison, Wisconsin**

TOO LATE TO CLASSIFY.

SHORT-HORN CATTLE.

USE A SHORT-HORN BULL

ARE you raising beef? A Short-horn bull will give you more scale and bone and more pounds of flesh for a given amount of feed than any other breed. Are you a dairyman? A Short-horn bull with milking ancestry will maintain your milk supply and will sire calves that will be quickly salable at a much higher price than you can hope for from a dairy bred bull. Are you a farmer? The Short-horn is the ideal for your purpose, because it is adapted to all conditions, of quiet temperament, takes on flesh readily, and yields a liberal flow of milk. The Short-horn always works improvement.

HORSES.

PROPRIETORS OF THE WHITE CITY STOCK FARM.

WE have never offered to our trade a more superior lot of Percheron and Belgian stallions, in both imported and American bred stock, than we can now show. Our imported horses are young and thoroughly acclimated, many of them having made seasons in 1915 and 1916 and are tried and tested sires. Our American bred horses were selected from the best breeders in America and are out of noted sires and dams and are horses of great quality in every respect. We have especially selected ten black and dark gray 2 and 3 year old Percheron stallions weighing 10 tons. These are all outstanding horses and should be purchased by those who need a sire for full-blooded mares. Among them is Coco, 1st prize 2 year old and reserve champion at the Wis. State Fair. This colt is black in color and weighs a ton. To the early buyer we offer one of the greatest collections of ton stallions to be seen in any importing barn this winter. We have no old, worn out, picked over stallions on hand. Let us know your wants, or better still, come and spend a day or two. A hearty welcome awaits you. Send 25 cents in stamps for large horse hanger, which shows the picture of a number of stallions now on hand, our main farm and sales stable and our firm's picture. Will sell several of our choice Iowa farms on easy terms.

FRANK P. SHEKLETON & SONS LAWLER, CHICKASAW CO., IOWA

We are 50 miles west of Prairie du Chien, Wis., on the Milwaukee R. R., making direct connections for Lawler.

4 Stallions PERCHERONS 2 Mares

WE are offering 6 very high-class Percheron stallions and mares; 1 two-year-old and one yearling stallion out of **Diana 53532** by Phil Sheridan and 1 yearling stallion and a 2 and 3 year old mare out of Karel 33640, a double bred **Baccarat** mare. The two-year-old stallion sired by Imp. Haricot 74108 is particularly good. Send for prices and description.

JOHN KLOEHN FOREST JUNCTION, WISCONSIN

PERCHERON STALLION FOR SALE

First-prize three year old at North Wisconsin State Fair, sired by Royalist, grand champion at the Wisconsin State Fair. Dark gray, weight 1,900 pounds. A heavy-boned, drafty fellow. You Get the Blood of Champions
At Cassville, Wisconsin, Friday, Feb. 16, '17

Poland Chinas

31 Gilts, 5 Fall Sows, 3 Tried Sows

at Wis., Timm Wonder by Fessy's Timm, dam by A Wonder. Omaha grand champion. Bred to Giant Wonder, 2d-prize boar at Wis., Timm Wonder by Fessy's Timm, dam by A Wonder.

Notice the Popular Blood Lines

MOST of the spring gilts are by **Monster Big Bone**, a son of Black Big Bone, the sire of Lone Big Bone, the grand champion at Omaha. Some by **King Joseph**, he by Big Joe, others by **Big Crushader 2d.** One tried sow by **Big Ben**, one by **Big Orange**, one sow by son of **Mouw's Jumbo.**

Bred to Excellent Boars

Timm Wonder is the largest spring boar in the state. Sired by Fessy's Timm, junior champion at Neb., by Big Timm, grand champion at Neb. Dam by A Wonder. **Giant Wonder** was the 2d-prize under-year boar at Wisconsin State Fair, 1916. He combines the blood of Heavy Bone, Chief Price, A Wonder and Giantess. Will show you gilts weighing 400—fall yearlings weighing over 500. **You get individuality and breeding combined.** Cassville is on the Burlington between East Dubuque and Prairie du Chien, in Grant county. If you can't attend, let Shreve buy a sow for you; I'll guarantee his buy. Write at once for one of the catalogs and mention The Wisconsin Farmer. Col. W. H. Cooper, auctioneer. T. P. Shreve, field man. Address

JERSEY CATTLE.

RED OAK STOCK FARM

F. R. CONSTANCE & SONS, Props.

HAVE one yearling Jersey bull and three yearling bull calves for sale. All out of splendid dams and sired by a bull whose dam made 526 lbs. butter on official test under just ordinary farm conditions. We also have a fine fall Duroc boars and gilts for sale. For Dec., 19 cows and heifers of all ages and periods of lactation gave us 618.2 lbs. fat for which we received 44½c per lb. or $275.10. This was at the creamery and this under just ordinary farm conditions.

WAUPACA WISCONSIN

Fewacres Farm's Jerseys

ARE heavy producers. Irene's Cherry 285828, a senior two year old, just completed a world's record of 12,571.6 pounds milk and 753,629 pounds butter fat. Write us about our young bulls for sale. Pedigrees and further description on request.

FEWACRES FARM - - - WAUWATOSA, WIS.

A 31.02 POUND BULL FOR SALE

RACINE JOHANNA PIEBE MERCEDES 188460. Born December 8, 1915. Well marked, of excellent conformation and well grown. His dam, **Ella Mercedes of Elm Court,** made **31.02 pounds butter** in seven days; **130.47** in thirty days and **829.78** in a year. She is a big cow weighing over 1,600 pounds; her dam weighs over 1,700. His sire, **Racine Sir Johanna Piebe,** is a show bull. His dam is a show cow and weighs close to 1,600 pounds. In seven days she made 24.49 and 808.82 pounds butter in a year. Send for his complete pedigree and picture. **Large size, good, straight type** and **heavy production ability** have been bred into this bull for generations. Come to our farm and see his dam, grandam and sisters. They are the type you will want in your calves. Am also offering a straight, well-grown heifer, born May 15, 1916, out of Lady Johanna of Elm Court, a half sister to Colantha Piebe of Elm Court; calf is sired by Count of the Pontiacs.

Reuben Klofanda R. 1, Racine, Wis.

HOLSTEIN BULL FOR SALE
Ready For Service

BORN January 1, 1916, sired by a proven son of King Segis De Kol Korndyke, sire of the first 40-lb. heifer and brother to the sire of the $50,000 bull and the $35,000 bull. Records of his dam and two nearest dams of his sire average butter, 7 days, 29.44 pounds. He is a good individual, a trifle more black than white. Priced right for immediat e sale. Address

PINEHURST DAIRY SHEBOYGAN FALLS, WISCONSIN

HEAD YOUR HERD WITH A WINNER

GET INDIVIDUALITY WITH BREEDING. Would you like to head your herd with a brother to the junior champion Holstein bull at the Minnesota State Fair, 1916, or the junior champion bull at the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of that blood that won for us the Premier Breedership at the Southwestern Dairy Show and the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of the blood that enabled us to win the Wisconsin Farm Management Contest, 1915? DO YOU want to breed individuality and production into your herd? If so, NOW is your chance. We offer some 20 choice young bulls from 1 to 15 months old bred in these lines. They are sired by our senior herd sire, Bairdland Segis Sir Prize, and out of daughters of Sir Urmagel Burke, a 31-lb. bull, with a 35-lb. sister. These daughters are making from 18 to 25 lbs. as 3 and 4 year olds. WHAT would one of these youngsters be worth to you? Write us your wants or come and see them. Herd tuberculin tested. Each animal guaranteed to be a breeder.

FREE

C. G. PHILLIPS
The Wool Fat Man

This Big Sample Box of My Famous Healing Ointment FREE POST-PAID

If you will just fill out and mail me the coupon below, I will send you this big sample box of CORONA WOOL FAT, FREE and POSTPAID. When it comes, try it as thousands of stockmen, farmers and herdsmen have already done — on any case of barbed wire cuts, sore shoulders, sore teats on cows, boils, ulcers, old sores; in fact, flesh wounds of any kind. See for yourself what a valuable preparation CORONA is. I don't ask you to pay me a penny for this sample—not even the postage. I simply want to show you, on your own horses and cows, the surprising results CORONA WOOL FAT will produce, WITHOUT COST to you.

Cracked Hoofs—before and after using Corona Wool Fat.

CORONA WOOL FAT

Before and after a bad case of scratches.

Corona heals barbed wire cuts smoothly.

CORONA WOOL Fat, the Healing Compound with unusual penetrating qualities, is unlike anything you ever tried or used. Don't confuse it with salves or ointments containing grease and blister compounds. CORONA contains no grease. Will quickly penetrate the horse's hoof, which is 60% to 70% water. That's why CORONA WOOL FAT succeeds where others fail. It goes right to the deep inflamed inner tissues, reduces the inflamation, soothes and relieves the trouble. *It will not burn or blister;* causes no pain or suffering.

Heals Galled Shoulders.

I Want to Show You at My Expense

what CORONA will do for quarter cracks, sand cracks, split hoofs, corns, hard and contracted feet, mud fever, scratches, grease heel, sore shoulders, cuts, wounds, boils, caked udders, sore teats, sore neck — in fact, all flesh wounds.

Read This Letter:

"We have never found anything yet that will do the work like CORONA WOOL FAT, as I have used it for everything it is recommended for and found it to be fully as good if not better than its guarantee. For cow's sore teats it has no equal and for cuts on horses it heals them up so smooth and nice leaving no scars. All around it is the best remedy for stock that any farmer can keep on hand, and once tried will always be kept on hand"

N. P. NELSON, Prop.
Sheridan, Mont.

For Collar Boils and Sore Shoulders.

LET ME PROVE IT TO YOU

That CORONA is the finest "safety first" remedy and one of the most dependable healing agents you can have on your farm. All I ask is that you send the coupon and get the big free sample box and my free book telling all about CORONA WOOL FAT.

THE WISCONSIN FARMER

VOL. XLVI. NO. 6. THURSDAY, FEBRUARY 8, 1917. WHOLE NO. 1828

This Is Swine Week in Wisconsin.

AGRICULTURAL Wisconsin has paused this week to give respectful attention to the hog. This is Swine Week at Madison and hundreds of farmers, their wives and children are enjoying the splendid exhibitions and the helpful addresses arranged for them by the great breeders' organizations of the state co-operating with the Wisconsin College of Agriculture in its various departments and the Wisconsin Agricultural Experiment Association.

There are two and one-half million head of swine in Wisconsin and room for as many more. Wisconsin may improve her swine wealth in two ways: First, by improving the quality of swine raised in this state; second, by improving the number of swine produced in the state. A reliable authority says that in 1915 Wisconsin sold twenty-five million dollars' worth of hogs at the four chief markets, namely, Chicago, South St. Paul, Milwaukee and La Crosse. The National Swine Breed Associations, representing the Berkshires, Chester Whites, Duroc Jerseys, Poland Chinas and Hampshires, have 500 members in this state and there are more than 1,200 breeders in Wisconsin whose hogs are listed in the official herd books. There is an average of fourteen hogs kept on each farm in the state. It has been figured out that the pork produced in Wisconsin alone in one year would be sufficient to supply the total population of the state for two years and two weeks. This is on the basis of one pound a week per person. According to figures for 1915, Wisconsin produced about 325 million pounds of dressed pork ready for the consumer. One of the experiment station statisticians has figured out that it would require 4,600 cars of thirty-five tons' capacity to move this Wisconsin supply of dressed pork, or if this large shipment of pork were divided up into trains of forty cars each, it would take 115 such trains to transport the meat.

FEW WISCONSIN FARMERS CAN AFFORD TO BE WITHOUT SWINE.

Wisconsin is able to draw on a splendid array of talent for any such program as is arranged for Farmers' Week. Mr. George C. Humphrey, of Madison, so well known in connection with the animal husbandry department at the college of agriculture, is chairman of the Swine Week program. This statement is enough to convince any of our readers that the live stock program for the week will be complete in all of its departments. This includes not only the special attention which will be given to the swine division, but also affects the dairy, beef cattle and horse departments. In a general way all of the live stock breeders' associations of Wisconsin are associated with the Wisconsin Live Stock Breeders' Association, of which Mr. Arthur Broughton, of Albany, is the president. Business sessions of all of the leading breed associations of the state will be held during Swine Week and leading breeders of other states will lend assistance to the growing movement for better live stock in Wisconsin.

One of the important events of Farmers' Week is the recognition service. At this service special honors are conferred on men or women who may have rendered some distinguished service to the state along agricultural lines. There have been twenty-four such honors conferred and seven of these were nonresidents of the state. Our Wisconsin people who have been honored by the College of Agriculture are as follows:

C. P. Goodrich, Fort Atkinson; A. L. Hatch, Sturgeon Bay; George C. Hill, Rosendale; H. A. Briggs, Delavan; W. A. Toole, Baraboo; Alexander Galbraith, Janesville; W. D. Hoard, Fort Atkinson; A. A. Arnold, Galesville; H. W. Griswold, West Salem; Arthur Broughton, Albany; J. H. True, Baraboo; George McKerrow, Pewaukee; A. J. Phillips, West Salem; J. W. Martin, Gotham; Mrs. Adda F. Howie, Elm Grove; S. J. Uhrenholdt, Hayward; C. H. Everett, Racine.

STRONG PIGS ARE RESULT OF PLENTY OF EXERCISE.

The Wisconsin Dairymen's Association, an organization long recognized as an important factor in the development of the dairy industry in this state, has arranged to have charge of one day's program. Upon this day the general subject of discussion is breeding, feeding and testing of dairy cattle for more profitable production. Mr. M. Michels, of Peebles, will have general direction of the exercises of the day. Twenty-five districts in the state having agricultural high schools have arranged to have three men teams present to participate in the boys' live stock judging contests. Another feature of the dairy divison of the week's exercises is the state convention of the newly organized Wisconsin cow-testers' associations. Vital matters of great interest to producers are to be discussed by N. A. Negley, of Madison; H. C. Searles, of Fond du Lac; and R. T. Harris, state supervisor of dairy interests.

Additional meetings arranged for this week call forth the forces in the state which are active along lines of social and home development. The Country Life Conference will discuss the latest thing in rural club work and the ladies who are present will be shown the newest things in cooking and sewing. Special emphasis will be made on the preparation of pork products for the table.

The grain-and-grasses show, held in Madison this week, is the largest display of pure-bred stuff shown anywhere in the country. Wisconsin's lead in the pure-bred grains is well known and the show this year, as arranged at the beginning of the week, was said to be the most representative that the Wisconsin State Experiment Station had yet gathered. All these things and others which it has not been possible to mention particularly add to the good measure served to those who are fortunate enough to be present Swine Week in Madison.

This issue of The Wisconsin Farmer goes to press before the exercises of Swine Week begin. Reports of the more interesting phases of the week's work will be contained in The Wisconsin Farmer issue of February 15th. This issue will also contain reports of the annual business meetings of the various live stock associations which are to be represented on the week's program. Some attention will also be paid to other matters which are considered of importance, and brief reviews will be given of the more practical addresses. This will be arranged in good form for our readers, because we know that only a few of them can be present and enjoy the profitable exercises of the week with us.

NO SLOP UNTIL AFTER FARROWING TIME.

Children as Milkers.

Milking is a man's job, not one for a young boy or girl. Children cannot do this work properly. It is a physical impossibility; they are not strong enough. Besides the actual lack of strength, boys and girls are careless and irresponsible. It always has been so and, undoubtedly, always will be. Children cannot, from the very nature of things, assume responsibility, and for them to be given the great responsibility of milking is asking too much of them. The dairyman who will allow, or compel, his young children to do any considerable part of the milking, is making a serious mistake. He [illegible] to lose money in the long run. [illegible] elf financetent per- [illegible] e milking [illegible] n his children to do this work. A cow should be milked rapidly and thoroughly, and every time just alike, and at the same time proper manipulation of the udder should be given. Milking is a job that will stand very little carelessness, if you want the cows to do their best. If one does not understand the principles of good milking or if he can't or doesn't observe them, he cannot be a success as a milker. Children haven't a proper conception of the importance of milking and they are prone to be careless. A father who is a good milker himself and who has carefully observed that correct milking gives better results, knows well enough that children cannot do this work properly.

It is not out of place to have the boy milk the easy-milking cows, and the girl also may well try her hand, as this teaches them to milk, and no boy or girl should leave the farm without knowing how to milk, even though they never expect to do much of such work. Once the art of milking is learned it likely will never be forgotten. It may be that the cow the boy milks will not do her best, but he must learn this work by actual experience. When he becomes mature enough and has sufficient strength, and last, but not least, when he has sufficient judgment, then the responsibility of milking can be gradually placed upon him. But never should this be done until he has sufficient strength to do job right.

The Value of Manure.

The fertilizing value of the manure from horses is about $20 per animal per year, and from cattle about $25, according to the chemistry section of the Nebraska Experiment Station.

Nearly half of the nitrogen and potassium from farm animals occurs in the liquid excrement. It is, therefore, important that this be saved through use of sufficient straw to absorb it. Manure stored in the open barnyard loses a considerable proportion of its nitrogen through fermentation, and its potassium and other mineral elements through leaching. This loss may be avoided by hauling the manure to the field as fast as it accumulates.

If this is impracticable, it may be stored in a covered shed where animals run over it and so keep it well packed. The greatest loss of fertility occurs when the manure is stored in loose piles.

NEWS OF THE SALE RING

Atwater's Duroc Jersey Sale.

L. F. Atwater, Bangor, Wis., turned the trick when he sold forty-seven bred Duroc Jersey sows at his farm January 30th for an average of $101.60. This is the state record for registered swine of any breed. It was a great sale in every respect. As usual, Mr. Atwater had the worst day of the year, blowing and snowing the entire day, but the breeders had arrived before the storm, and while the crowd was not large, those present were real buyers. Naturally, the top of the sale was the grand champion sow and there was considerable speculation before the sale as to what she would bring. It was a three-handed game between Hugh Irwin (mail bid), of Iowa; Riley Martiny & Son, Baraboo, Wis., and the Albert Lea Breeders' Assn., of Minnesota, up to $300, when it simmered down to Wisconsin against Minnesota and finally the latter succeeded in landing the best sow we have seen enter a sale ring this winter at $410. Dennis Shea made a good buy when he bought No. 11, sired by Prince Illustrator, at $152.50. M. F. Vogt, Worthington, Minn., bought a good fall yearling at $145. Riley Martiny & Son bought several of the best gilts that were sold. Proud Chief Jr. made a great hit with the crowd and the demand was for sows bred to him. Twenty-one head sold for $100 or over, sixteen for $75 or over and ten for $65 or over. The forty-seven head brought $4,782.50, average $101.60. It was a wonderful sale in every respect. I. E Stickelman sold the offering and made many friends by handling the sale in such a high-class manner. We follow with a complete list of the buyers and prices paid:

No. 1, Albert Lea Breeders' Assn., Albert Lea, Minn., $410; 2, Albert Lea Breeders' Assn., $135; 3, B. I. Lein, Red Wing, Minn., $165; 4, Geo. Willsie, Prosper, Minn., $77.50; 5, G. C. Kock, Fairmont, Minn., $105; 6, F. Christianson, Fairmont, Minn., $105; 7, Henry Mitchel, Fennimore, Wis., $70; 8, M. F. Vogt, Worthington, Minn., $145; 9, C. Wilkinson, Fennimore, Wis., $102.50; 10, Albert Lea Breeders' Assn., $115; 11, Dennis Shea, Melvina, Wis., $152.50; 12, Henry Fenska, Rio, Wis., $90; 13, Elmer Napp, Fennimore, Wis., $85; 14, Elmer Napp, $70; 15, Wm. Magge, Fennimore, Wis., $87.50; 16, F. Christianson, $77.50; 17, D. B. Smith, Mission Hill, S. D., $100; 18, Allen Thompson, Galesville, Wis., $67.50; 19, Peter Gunderson, Fennimore, Wis., $82.50; 20, E. A. Herberlein, Fennimore, Wis., $65; 21, Carl Piska, Bangor, Wis., $75; 22, R. E. Morrison, Clinton Falls, Minn., $112.50; 23, Geo. E. Purves, Eyota, Minn., $70; 24, C. A. De Vaul, Inwood, Iowa, $100; 25, Riley Martiny & Son, Baraboo, Wis., $142.50; 26, Geo. D. Sprain & Sons, West Salem, Wis., $105; 27, Geo. Brooks, Sparta, Wis., $105; 28, Geo. E. Purves, $107.50; 29, F. Christianson, $72.50; 30, W. C. Hesselberg, Bangor, Wis., $65; 31, Riley Martiny & Son, $90; 32, Albert Lea Breeders' Assn., $125; 33, Krause Bros., Sumner, Iowa, $85; 34, Wm. Edge, Fennimore, Wis., $77.50; 35, Wm. Edge, $90; 36, Peter Gunderson, $65; 37, Dennis Shea, $95; 38, Geo. Pagel, Zumbrota, Minn., $75; 40, Riley Martiny & Son, $125; 41, H. S. Tillotson, Brooten, Minn., $102.50; 42, H. A. Hein, Paynesville, Minn., $100; 43, Riley Martiny & Son, $100; 44, Elmer Napp, $90; 45, W. C. Hesselberg, $65; 46, H. F Laird, Brooten, Minn., $75; 47, Albert Lea Breeders' Assn., $85.

Dennis Shea's Duroc Jersey Sale.

Dennis Shea held his first sale of Duroc Jersey bred sows at Melvina, Wis., January 29th, the result of which was very satisfactory. For a breeder's first sale he had wonderful support, the breeders of Wisconsin and Minnesota bidding liberally on the good stuff. Mr. Shea had his Durocs in nice condition, with plenty of size and stretch and bred to three good boars. Mr. Roberts, of Black Earth, was a good buyer and bought some excellent foundation sows at this sale worth the money. We follow with a complete list of buyers and prices. The forty head made the satisfactory average of $61.50. Col. I. E. Stickelman, of Iowa, did the selling in a highly commendable manner:

No. 1, Gant's Farm, Delavan, Wis., $70; 2, L. F. Atwater, Bangor, Wis., $55; 3, L. F. Atwater, $67.50; 4, G. B. Murray, St. Charles, Minn., $62.50; 6, Wm. Magee, Fennimore, Wis., $67.50; 7, A. C. Cass, Viroqua, Wis., $60; 8, Geo. Koop, Galesville, Wis., $55; 9, F. B. Roberts, Black Earth, Wis., $56; 10, H. L. Foss, Melvina, Wis., $77.50; 11, Wm. Magee, $70; 12, Theo. Retten, Sparta, Wis., $57.50; 13, Jos. Schlittel, Sparta, Wis., $55; 14, Wm. Spellpflug, Trempealeau, Wis., $60; 15, H. L. Foss, Melvina, Wis., $70; 16, Wm. Spellpflug, $57.50; 17, G. D. Murray, $67.50; 18, Andrew Tollefson, Viroqua, Wis., $67.50; 19, G. D. Murray, $67.50; 20, Andrew Hegge, Westby, Wis., $75; 21, F. B. Roberts, $55; 22, O. G. Leon, Westby, Wis., $60; 23, A. C. Cass, $55; 24, Theo. Jones, Cambria, Wis., $55; 25, Chas. Sturtevant, Melvina, Wis., $67.50; 26, Henry Mitchell, Fennimore, Wis., $57.50; 27, G. D. Murray, $57.50; 28, H. L. Foss, $51; 29, F. B. Crothers, Kilbourn, Wis., $52.50; 30, F. B. Roberts, $52; 31, Theo. Retten, $52.50; 32, Fred Matthes, Viola, Wis., $55; 33, F. B. Roberts, $60; 34, H. L. Foss, $67.50; 35, Martin Erickson, Leon, Wis., $52.50; 36, Geo. Spellpflug, Leon, Wis., $50; 37, M. Christopharson, Leon, Wis., $50; 38, G. D. Murray, $65.

Grimes Bros.-Grueger Duroc Sale.

Messrs. Grimes Bros. and W. G. Grueger sold 40 head of bred Duroc Jersey sows January 29th at West Union, Iowa. While no high average was secured, the owners were highly pleased with the prices, considering local conditions. A number of breeders from that section were present and the most desirable part of the offering sold very satisfactorily. The top of the sale was $100, that amount being paid by W. G. Grueger and she was a bargain at that price. Col. H. S. Allen did the selling in his usual satisfactory manner. Consigned by Grimes Bros. Selling for $40 or over: Extra, W. G Grueger, Hawkeye, Ia., $100; No. 1, C. M. Klingman, Elgin, Ia., $67; 2, W. Van Sickle, West Union, Ia., $46; 3, W. Van Sickle, $49; 4, Ray Darnell, West Union, Ia., $42; 5, Krause Bros., Sumner, Ia., $45; 6, Chas. Heaton, West Union, Ia., $47; 7, Fred Pape, Eldorado, Ia., $43; 8, W. E. Carnell, Ossian, Ia., $46; 10, Chas. Heaton, $45; 24, F. F. Phillips, West Union, Ia., $40; 25, A. Denermuth, West Union, Ia., $40. Total, $1,038; average on 25 head, $41.25. Consigned by W. F. Krueger. Selling for $40 or over: No. 26, J. W. Bower, Hawkeye, Ia., $72; 27, D. M. Browise, West Union, Ia., $87.50; 28, G. D. Grimes, West Union, Ia., $57.50; 29, C. M. Klingman, $56; 30, A. Hanson, Oelwein, Ia., $60; 31, M. Cottle, Fayette, Ia., $60; 32, H. P. Schmidt, West Union, Ia., $59; 34, John Moore, Vandalia, Ia., $55; 35, Frank Patterson, Fayette, Ia., $47; 38, Frank Patterson, $41; 41, C. M. Klingman, $52; 40, W. F. Merfeld, Greene, Ia., $54; 39, H. Chapman, Aurora, Ia., $48; 42, W. Mellens, Fayette, Ia., $44; 43, W. A. Meyer, Castalia, Ia., $42. Total, $948; average on 18 head, $52.66.

Faultless Stump Puller

At a Special Low Price

The Faultless actually pulls from 50 to 100 percent more stumps at less cost of time and labor than any other stump puller. The cable winds onto the drum at the bottom all the time and the idle coils slide toward the top. This keeps the pull down and in a direct line with the anchor, and increases power. The machine cannot tip. Drum accommodates all of the cable, and it goes on only one layer deep. This prevents wear and relieves the strain on team and machine.

Machine and Cable are Guaranteed

against breakage for one year. Machines in use 15 years and longer are still in service.

Pull Stumps for 10 Days---Free

Clear from 10 to 50 acres. If not then satisfied that the Faultless Stump Puller will do more than we claim, return it to us at our expense.

The superiority of the Faultless is recognized by hundreds of farmers and railroads. It received highest awards at both the World's Fair at St. Louis and the Lewis & Clark Exposition at Portland in competitive demonstrations.

Write for special low price on our complete outfit, and our free book on clearing stump land.

Faultless Stump Puller Company, Dept. W, Cresco, Iowa.

The Wisconsin Farmer

THURSDAY, FEBRUARY 8, 1917.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

THE REAL ARISTOCRATS.

I HAVE been deeply interested in remarks recently made before the students of the Wisconsin College of Agriculture, by President D. D. Aitken, of the Holstein-Friesian Association of America. President Aitken takes the position that farmers will be the aristocrats of the future. While I can thoroughly agree with this progressive Michigan man, who has done so much to advance the interest of a great breed of dairy cattle, I am inclined to believe that he puts the matter a little too much in the future tense. To be sure, the farmers of the country are to be the aristocrats of the future. But are they not already in the aristocratic class? I do not mean aristocratic in the sense of snobbishness, or in that they are able to live a life of ease. To my mind, the truly aristocratic class is the independent class—the class which is engaged in pursuits which form the basis of all real wealth. Taken in this light, we cannot say that the laborer is in the aristocratic class, for he is subject to the beck and call and often the victim of whims, of the man or men who are over him. I do not think we can truly say that the capitalist is in the highest sense an aristocrat. To come nearest to my idea of an aristocrat the capitalist should retire to a good farm and take up that existence of which nature and nature's God are such important parts. Wealth by no means spells independence. Some of our wealthiest men are least independent. Many of them go to bed at night not knowing what the morrow will bring forth. They live in a constant fear that their wealth will be suddenly taken away from them.

As Mr. Aitken has pointed out, the social status of a man a hundred years ago depended upon the land he owned. Whether this situation will return to us in another fifty or 100 years, I cannot say, but I do firmly believe there will never come a time when any class of our citizenship has as good a claim to the title, "aristocrats," as the farmer. Who is more independent than the farmer? Who enjoys better health? Who is so certain of fair profits on his labor, or who is so sure, upon rising in the morning, that his possessions have not lost value during the night? Who can find more enjoyment than the man who aids his Maker in the production of foods for the hungry mouths of the world. It is never necessary for a farmer to grind down some other farmer in order to make a success in his own business. It is not possible to cheat the farmer out of his birthright of sunshine and moisture and soil, and there is no occupation under the shining sun in which the Creator of the world enters so largely in co-operation with the worker as the occupation of farming. I cannot help but feel that President Aitken is on the right track when he says that the farmers of the country will be the real aristocrats of the country in half a century; but, as I have said before, my only suggestion is that Mr. Aitken puts too far away the day when the farmer shall be held by all in the esteem which he deserves.

R. F. D. SERVICE AT THE DOOR.

I am glad to find my readers writing to me in increasing number for advice, information or suggestions on matters which lie close to their hearts. I hold this to be one of the provinces of the publisher of a paper such as The Wisconsin Farmer—to be useful in every possible way to his readers. Nothing gives me greater pleasure than to serve others to the best of my ability.

To illustrate, here is a letter from a subscriber living here in Wisconsin, who wishes to know if there is not some way of getting the mail delivered at the door of his farmhouse, instead of compelling him to walk a quarter or a half mile every little while to get his mail and transact his business with the postman. Inasmuch as it is a question which affects almost every one who enjoys rural mail facilities, I can hardly do better than to print the letter in full, as follows:

My dear Mr. Pierce: Here is one thing we farmers want and need: our mail delivered to our door. We who live from a quarter of a mile to a mile from our mail box have to travel many miles each year. Now, for instance, we want a money order; we go to our box early, the carrier is late, we stand in the road sometimes one to two hours waiting for him. The next time we want to mail some letters; we go to the box and mail our letters, we have not time to wait, but will have to make another trip to get our mail. In farming time we are awful busy and tired and don't always feel like walking two miles after a day's work. Your good paper is always trying to help us farmers and this is one of the things that would help us greatly. I wish you would do what you can for us.

Upon receipt of this letter, I immediately took the matter up with the postoffice department, receiving this reply, giving an explanation of the department's attitude on this subject and on service to farmer patrons generally:

Dear Mr. Pierce: It is an impossibility to have rural route service past the home of every farmer in the country. The rural routes are so arranged that each carrier can serve the greatest number of people in the 24 to 30 miles which he has to travel each day. If there is any rural route where a larger number of patrons can be served by making a change and not adding any additional mileage to the route, the department is always glad to take the matter up and adjust it. Under the recent reorganization of the rural routes throughout the country more than 300,000 additional families are being served without additional expense to the department. Any changes desired on any route should be taken up direct with the Fourth Assistant Postmaster General, Division of Rural Mails, Washington, D. C.

I propose to write to this official to see what can be done in this particular case. I would suggest that others of my readers (who wish their routes changed, so as better to serve them, or to include more families), also write him. It is worth something to know just who is the proper person to see on a matter like this.

I have great faith in the R. F. D. service and its possibilities. It has been a splendid factor here in Wisconsin and throughout the entire Northwest in bringing the country into closer touch with the town and in giving the farmer urban advantages. At the same time, much as has been accomplished, much more remains to be done. I hope and believe the day will come when every farmer will receive mail delivered to his very door. But we must not be selfish; those of us who receive our mail in a box at the crossroads must be content, if the service as thus established permits a neighbor also to receive mail, which he would not receive were the route to be changed so as to bring the carrier to our door. We must be fair in all things. Better that every farmer in Wisconsin should enjoy the benefits of the R. F. D. service, even if the box is a quarter or a half mile from our home, than that only one-half should enjoy the privilege and the rest be obliged to drive clear to town for their mail. Let us take up the individual cases with the proper officials at Washington and strive to secure the greatest good to the greatest number.

THE FARMERS' INCOME TAX.

I WANT to call my Wisconsin readers' attention to the fact that the income tax on net earnings between $3,000 and $20,000 a year will be double this year what it has been for the last two years. The same $1,000 exemption will apply to married men living with their wives.

The workings of the federal income tax are now fairly well known to my readers, for it has been in operation almost two years. Heretofore farmers (as well as city men) whose income exceeded $3,000 a year, if single, or $4,000 if married, were obliged to pay only 1 per cent on the amount of the income in excess of those figures. But the government needs more money, finding an extraordinary condition of affairs existing, due to the war. Congress has repealed the stamp tax (which compelled us to affix stamps to notes, mortgages, telegraph blanks, express receipts, and so on) and has raised the income tax to make up the deficiency.

When the government issued its 1915 crop report in detail (the 1916 one for all the states has not reached me yet) I took the time and trouble to figure out the average earnings per farm, according to these figures. I found that, while the average farm revenue for the United States was $1,692 last year, for the ten states of the grain belt (Wisconsin, Iowa, Illinois, Missouri, Nebraska, North Dakota, South Dakota, Minnesota and Oklahoma) it was $3,040. Four of the ten states exceeded this average quite materially. North Dakota led the list, with an average farm revenue of $4,584; South Dakota came second, with $3,814; Nebraska came third, with $3,777; Iowa came fourth, with $3,498. This means that, on the average, every one of the 74,360 farmers in North Dakota (using the 1910 census figures), the 77,644 farmers in South Dakota, the 129,678 farmers in Nebraska, and the 217,044 farmers in Iowa come under the provisions of the federal income tax, which requires a report to be made on all incomes in excess of $3,000, whether the income-earner is married or not, the exemption to be granted if married, but the report to be made nevertheless.

With the high prices prevailing for dairy and other farm products this year, Wisconsin and two or three other states here in the middle West should get into the $3,000 farm-revenue class, for last year Wisconsin, Kansas, Illinois and Minnesota missed the mark by from $150 to $200 only. I have seen the 1916 government crop report in general, but not in detail. It places the worth of four crops at more than $1,000,000,000 each. It gives the 1916 corn crop a valuation of $573,103,000 more than the 1915 crop; the cotton crop an increase of $475,378,000; the wheat crop an increase of $83,462,000; the hay crop an increase of $95,250,000. The grain belt leading the nation in corn, wheat and hay, the 1916 figures, in detail, should show such an increase as to bring seven or eight of these ten states in the list of those the average farm revenues of which are in excess of $3,000 a year. This is particularly true of Wisconsin, owing to the high prices for butter, cheese and milk.

THE GIFT OF A THANKFUL HEART.

SOME weeks ago I received one of the most touching letters which it was ever my privilege to read. It is the one which I printed on this page as a New Year message to my Wisconsin Farmer readers. You may recall that it came from an immigrant-farmer living in the northern part of Wisconsin. He told me, with rude eloquence, of the troubles through which he and his good wife had passed and of the good fortune which finally dawned when a son was born to them, on Washington's birthday. I remember one portion of his letter, word for word:

We honestly and faithfully prayed the little Christ child to give us courage and strength to try another year and, thank the good Lord, this year it looks a whole lot better.

Whenever I am inclined to be downcast or discouraged (which is not often nowadays, I will admit) I repeat these words to myself. They promise to be an inspiration and a cheer so long as it may be granted me to live.

I find that I am not alone in this respect. Letters come to me almost every day, from persons who have been moved by the story which this Wisconsin farmer told in his simple, yet eloquent, way. One of these letters has touched me almost as much as the original. I think I can sense a homesick note in the letter, for the writer has wandered far from his old Wisconsin home and I doubt not often wishes he were back among us. Here is the letter, as it came to me from Baker Springs, Arkansas, where the writer, Curtis M. Dunbar, has been living for the past three years. You will find it as eloquent (in a natural, unstudied way) as the original letter from the Wisconsin farmer which inspired it:

Dear Mr. Pierce:—I have often thought I would write to you, but keep putting it off. Sometimes when I read letters in your good paper like your New Year's message I think I will write, for that has been my experience almost exactly. For the last three years I lived on an Arkansas homestead and could barely get food for my little family, let alone clothes. And when our baby boy came to bless our home, like the brave Wisconsin farmer, we cried aloud to the Christ child to keep us warm and free from hunger and we named him John, because the Good Book, where I was reading at that time, said "Thou shall call his name John." Then we had four hungry babies from eleven to three years of age and only had corn bread made with water to eat, no clothes and debts staring us in the face from every side. That was two years ago. I now thank the great and divine ruler of all things, for with His help and by reading your helpful and inspiring paper (for next the Good Book I read your paper most), I owe no man, have a good living, some stock, some money and good health in my family.

So thanking you, dear Mr. Pierce, for sending me your paper when all others failed me because I did not have that almighty cart wheel called the dollar. I will close, hoping this won't tire you and hoping you and your good paper live many more years to print and send out such good, wholesome, eye-blinding messages as was your New Year's message.

Can you not comprehend the pleasure which it gives me to receive such letters from men, all over our own state and from other states far away, who tell their stories in such a simple, unaffected, manly manner? Can you not see the love light in this man's eyes, as he looks upon the child, John, given him as a sign that better times were coming soon? Can you not sense all the pride and thankfulness and sympathy which well up in this man's letter? I tell you, my friends, such letters are reward for my feeble efforts at writing far beyond the power of men to measure or compute. I am proud, indeed, to have the friendship of the writers to such an extent that they will bare their hearts and souls so intimately. May I never do or say aught which will lessen this confidence; may I always be guided so as to say and write the right word—this is my constant hope and prayer, as I sit down to write this page of intimate talks with you who do me the honor to read what I write.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-in-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Avenue Des Moines, Iowa — 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscriptions or advertising may be addressed.

MEMBER AGRICULTURAL PUBLISHERS' ASSOCIATION. MEMBER OF AUDIT BUREAU OF CIRCULATIONS

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of 100 or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance. $5.00. Subscription price in Canada $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as before or state both the old and new names and explain why you change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address

The Wisconsin Farmer Madison, Wis.

A Big and Busy Year.

Now that the ground hog has seen his shadow throughout most of the grain belt, and has retired for six weeks more of winter, there remains before us a period of time which we cannot use to better advantage than by reading the best and most practical matter obtainable. With this idea in view, we propose to make the forthcoming issues of The Wisconsin Farmer so valuable and entertaining to every member of the farm household that to miss a single number would be a positive loss to all.

The coming year promises to be a big and busy one for the grain-belt farmer. Shall he not do everything possible to enable him to take advantage of every opportunity, to be a better farmer, to reap larger profits, to elevate his living standards, to get more out of life generally? We shall have these ideas in mind as we publish The Wisconsin Farmer throughout the coming year; every number shall be issued with a sincere purpose and aim to bring all these things about. We propose to make 1917 the most useful year this paper has ever known.

While we are doing this, will you do your share by renewing your subscription promptly and by securing as many new subscribers (friends, neighbors and relatives) as possible? Thus co-operating together we shall be enabled to make The Wisconsin Farmer reach our topmost ideals, serve you most usefully and continue the copartnership between us (publisher and reader) which has been mutually pleasant and profitable for so many years.

Does It Pay to Test Your Cows?

The Wisconsin Farmer is in receipt of the following from W. W. Clark, one of the progressive agriculturists of Wood county:

Last week a carload of grades and pure breds were sold from this vicinity to parties from Iowa. One cow belonging to J. C. Kieffer & Sons, of Auburndale, sold for $170. She had made a record the past two years of well over 500 pounds of fat. She also won first in her class at the Central Wisconsin State Fair. Her two-year-old heifer brought $135. Peter Hockstra, of Arpin, received $110 for one grade and Wm. Behling, of Vesper, sold several at good figures. These were all grade cows. These same men from Iowa took back three pure-bred Guernsey calves for which they had paid $350. Everything they bought was tested or was from tested dams. Read this over and figure out for yourself whether it pays to test or not.

The eyes of some of our dairymen have been opened by the good results which have come from cow testing. This is not the first instance where we have heard of dairymen from other states coming into Wisconsin and looking for tested cows. We certainly believe that it is safe to say that the average tested cow showing a good record will sell much better than the average untested cow having no record. Of course, the cow tester does not establish any such facts as are brought out by the registry tests, but he does establish the production qualities of the cow and good dairymen everywhere are looking for high-producing cows to breed to bred-for-production bulls. The stock argument in favor of cow testing is that it shows up the unprofitable cows. The added argument is that it gives us a record upon which to make a good sale on any cow which has proved her worth at the milk pail.

Wisconsin Farm Labor Problem.

H. C. Taylor, secretary of the Wisconsin Brown Swiss Cattle Breeders' Association, has written for the Wisconsin Bankers' Association a bulletin on the farm labor problem. Mr. Taylor, of course, admits that the ideal solution of the farm labor problem is the farm family—a farm just big enough for a good-sized farm family to take care of without hiring any outside help.

The ideal in this regard is about as frequent as the ideal usually is. Of course, there is a long period before all of the children are able to do regular farm work—that is granted that there is to be a good-sized family. And then we have the problem of the children who are old enough and big enough to work moving away about the time they get to be of greatest service. There are many reasons for their going. In some cases they are called by ambitions to get a better education than they can get at their own door. Then there are those who are lured by the city, and this is especially true right now when wages are high and work is plentiful in the industrial centers.

In endeavoring to answer the question how the farm labor situation is to be remedied, Mr. Taylor says:

Obviously there are about three possible answers: (1) Replenish the supply. (2) Make better use of what labor is to be had, by better management, or using more machinery. (3) Reduce the size of the farm, or shift the type of farming to one taking less labor. The first two of these are the most important; the third is the last resort.

How is the labor supply to be replenished. Raising more sons would help greatly, of course. But probably enough sons are being born now if only a few more of them would stay on the land. What can be done to make them stay? Most important of all is to give a good man a chance to rise. It is just because the door of opportunity has seemed to be wider open in the city that so many of the sons have left. It is true even today, however, that the young man on the farm is getting ahead faster than the factory worker, for the simple reason that he is able to save two-thirds or three-fourths of his wages, while the city worker lives from hand to mouth, always only a month or two ahead of starvation. With this chance to save the thrifty farm wage-earner can hope in a few years to become a tenant and in time own a farm. But land has gone sky-high, much higher than wages, and it takes a large pile of money to be even a tenant today, so that too many sons have lost heart or never even started. Now many farmers of today are realizing this and are trying out new kinds of bargains with a good man when they find him. There are many other ways still to be thought out and tried. The farmer who is able to keep a good man until he is ready to become a farmer himself has solved this part of the problem.

Better wages is always a stimulus which is effective in holding men in any employment. The danger is that with rising prices farmers will adhere to customary wage rates until the young men have all gone beyond their reach. The quickest way for a farmer to reconcile himself to higher wages is to note what change has taken place in the prices of his products and then calculate how much he can raise wages without its taking any more milk, pork, or grain than formerly to pay the wages.

A young man, however, is sure to consider other things than his opportunities for advancement and his pay checks. The farm in the past has offered too few of the pleasures of life to farmer helpers.

Better treatment of hired help would also help in many cases. The scarcity of labor has come first on the farm, and the result is that the farm laborer has become independent—he has become independent in many cases b fore he has become intelligent enough to use his independence properly. Nevertheless there are some farmers who seem to have little trouble with losing their hands when they need them most, and the reason usually is that these men are tactful, and above all, respectful of the personalities of their workmen, so that at all times, they have their esteem and hearty co-operation. The right sort of a hired man always wants to take an interest in the farm work, and his employer should give him a chance to learn all he can about farming. The working day has got to be shortened in some way also; but every good farm hand will understand that there will be times when all rules as to hours must be broken.

Still another thing that will keep more men on the farm is year-around employment. Farmers will have to organize their crops and live stock so as to be able to hire a man by the year. No good farm hand wants to loaf all winter, or hunt a job in town.

If a farmer cannot get help in the ways indicated he will have to manage with less help, either by getting more machinery, a milking machine, perhaps—or by raising such crops as he can handle. Planning his crops and his work so that too many things do not have to be tended to all at once will help a great deal. Winter dairying evens out the load of work in many ways.

In the face of another year of scarcity of farm labor Mr. Taylor's review of the situation and his conclusions are interesting.

WISCONSIN FARMER DUROC JERSEY TROPHY.

This loving cup has been offered by The Wisconsin Farmer for the winner of the Duroc Jersey futurity at the Wisconsin State Fair, Milwaukee, 1917. This is the third year in which The Wisconsin Farmer has offered such a trophy and hog men are interested in the contests which result. The Wisconsin Farmer is anxious to do its part in advancing the interests of the various breeds of hogs in this state.

Making Good in Upper Wisconsin.

The Wisconsin Farmer frequently receives communications from its readers and friends relative to some farmer who has made good in Upper Wisconsin. The following statement is from J. J. Heffron, of Stevens Point, Wisconsin, and we believe it will be of interest to those who are keeping tab on agricultural development in this state:

About twelve years ago, I traded Walter Andreweski a forty-acre farm with a new five-room house and barn 24x30 and gave him some tools and machinery, one cow, one horse and a few chickens. I took a mortgage on the forty acres for $625 for five years at 6 per cent. The forty acres was all wild land at that time. Mr. Andreweski gave me a house in Chicago with a mortgage of $800 and I later sold this place for $1,500, so you see he was worth at that time about $700.

Since he has come on to the forty acres he has bought over 300 additional acres of adjoining land. A short time ago he called on me and I asked him how many cattle he had and he told me that he had sold several, but that he expected to winter fifty-one head and in addition twelve horses. A few years ago he sold over $2,000 worth of potatoes from one crop. I asked him what he considered his place worth and he remarked, "$20,000 wouldn't move me now." He said also that he owed a few hundred yet, but that his milk checks and another year's crop would square him with the world. I could name almost 100 similar cases which I have located in the last twenty-five years. I site this only as an example of what can be done by hard work in Upper Wisconsin.

We have no doubt but that Mr. Andreweski and his family have worked hard, but they had a good living and their present wealth represents practically all savings. We leave it to any of our readers whether the Andreweskis would have saved $20,000 in twelve years if they had remained in Chicago. They probably would not have had one-fifth that amount if the entire family had been at work all the time.

A Word About Seed Corn

One of our subscribers recently brought up a question regarding the testing of seed corn. He stated that he had kept his corn in the furnace room all winter and he was in doubt about the necessity of making a thorough test of all this seed. This inquiry attracted the attention of another subscriber who has had some experience along this particular line. He says that the furnace room is a good place to keep seed corn providing it is ventilated, but it is a poor place if there is no ventilation. He has obtained best results by thoroughly drying out his seed corn in the fall, after which it is placed in an outbuilding where it will be kept absolutely dry. In his experience it has never been injured by cold weather, but this subscriber suggests that special pains must be taken in the testing out of corn that has remained all winter in a room heated by a furnace.

We are glad to call this matter to the attention of our readers because there might be instances where too much confidence may be placed in the vitality of corn that has never been exposed to a freezing temperature. It must be remembered that a germ may be injured by heat and moisture just as well as by cold, and if the test of 100 ears shows that the corn is not perfect in vitality, then it will pay, in all probability, and pay well, to make a thorough test of the entire supply so that the weak and dead ears can be discarded.

Feed the Young Bull Liberally.

One of our subscribers calls attention to the fact that he has a young Hereford bull that he wants to fit for the sale ring. This bull now weighs 600 pounds and the owner has on hand plenty of oats, corn, ensilage and timothy hay. The question with him is what ration should be used so as to get the best possible growth, thereby enabling him to bring this bull into the sale ring a little later in fine condition.

These are good foods and many a man could take this bull calf and put on three pounds of gain a day with this combination and at the same time run no risk of injuring him. Ordinarily, however, we would prefer to add a little oil meal to this ration so as to make it a little richer in flesh-forming material. The calf will eat anywhere from two to three pounds of oil meal daily, but he should be worked up to this point gradually. Whole oats are not very palatable, although they make an excellent feed. In feeding a bull we would recommend that they be ground and after that a mixture composed of equal parts oats and corn with a little oil meal added will produce excellent results.

After all is said and done a great

deal must be left to the judgment of the feeder. The bull should run in a box stall or have access to a yard and his habits should be studied closely. See to it that every vestige of his grain ration is promptly eaten up. Just as soon as he begins leaving some in his trough this indicates that the danger point is being reached. If you get his blood heated up by too heavy grain feeding the bull may be foundered and permanently injured. Of course, an experienced man is not apt to encounter that difficulty, but one who has not had considerable experience is apt to meet trouble half way if he attempts to make big gains on a young bull. We would suggest that an attempt be made in this case to buy some clover hay or to exchange a load of timothy for a load of clover. The latter is richer in flesh-forming material and may be fed heavily. It has a slightly laxative effect and when it is used freely there is very little danger of injuring a calf.

A Hurry-up Pasture.

During the next few weeks many inquiries will be received from subscribers who expect to face the problem of pasture shortage next spring. At this time a communication from Mr. L. L. Akin introduces the subject, as he is anxious to obtain as soon as possible in the spring a calf and colt pasture. In this particular case the land is somewhat wet—too wet for the growing of corn or small grain—so that it is the intention to put it into permanent pasture.

In the very necessity of the case it is impossible to obtain good grazing before the month of June. Annual crops must be used because they grow much more quickly than perennials We would advise sowing a mixture of oats and barley, half and half, or oats, barley and wheat in the proportion of one-third each, using about three bushels of seed per acre. Have the seed bed well prepared early in the spring and the crop put in just as soon as possible. If conditions are at all favorable for growth the stock can be turned into a field handled in this way in June, the exact time, of course, calling for the exercise of judgment on the part of the owner. Unless there is considerable growth and it is heavily pastured the crop will be grazed down too closely and for that reason it pays to allow growth of at least six or eight inches before grazing begins

Of course, these annuals will mature naturally some time during the summer months, even though they do not head out and mature in the normal way. Pasturing will delay the ripening process and there may be good grazing through the months of June, July and August. Provision for fall pasturing must be made by sowing some of the grasses early in the spring when the grain is seeded. A mixture of clover and timothy will answer the purpose well, but as this land is somewhat wet we would advise using alsike instead of red clover, and it might be well to add five or six bushels of red top, a grass that is well adapted to wet ground and one that is useful for grazing purposes, but almost worthless for hay.

We have one more suggestion to add, namely, that the sowing of a little fall rye along with the grains mentioned will usually lengthen the pasturing season because fall rye seeded in the spring does not mature until possibly September or October. It will remain green after the spring grains have matured and as long as there is a good growth of any of the grains on the surface the young timothy and clover plants will not be injured by too close grazing.

Sow the Clover Early.

More clover is killed out as the result of the hot, dry weather in July and August than is lost from the failure of the seed to germinate in the spring. Here and there, however, may be found instances almost every season where clover and timothy seed is not given a chance in the spring. These seeds being very small, they must of necessity receive only a light covering and where the surface soil is very dry this covering may not stay moist long enough to insure germination. We simply have the absorption of a certain proportion of water by the seed, and, in turn, the reabsorption of the moisture from the seed back into the soil again. In this way the vitality of the seed is impaired, resulting in either a complete loss or in a partial stand.

Because of the number of instances where failure results because of the dryness of the soil in the spring we are more and more taking to the plan of sowing the seed early. A few hard freezes of the surface soil after sowing will do no harm, because the coating of clover seed is very hard at any rate and the freezing may simply result in bursting the outer shell. In the case of seeding down fall grain, such as winter wheat and rye, one may safely sow the seed during the latter part of February or early in March. In that case, the freezing and thawing of the surface soil will imbed the seed so that it will not be necessary to harrow the soil for the purpose of covering the seed. The old-fashioned plan of sowing on the last snow is a meritorious one because it means that the seed becomes thoroughly soaked and softened so that when conditions favorable for germination arrive sprouting will quickly take place.

Where it is the intention to seed down with spring grain the seeding may be done even before the seed bed is thoroughly prepared. In some cases very good results have been obtained by breaking cornstalks either with a disk or with a stalk cutter and then sowing the grass seed before any disking is done. While possibly in such instances a small proportion of the seed will be covered deeply, still in the long run it will be found that this plan results in a uniform stand. All the work that is done later in preparing the seed bed for the grain means that the clover seed will become thoroughly incorporated with the surface soil, thus favoring in an ideal way the germination of all the seed.

It is true that a little extra labor is involved in this plan and some will object to it on that account, preferring to sow the clover and timothy after the seed bed is prepared. In this case the essential thing is to do some work on the soil after the seeding is done. It will never do to simply use the grass seeder behind the drill if it is not the intention to harrow the soil afterwards. Good results follow the plan of using the seeder in front of the drill because in that case the grass seed is in a way placed between the rows of grain where conditions will be more favorable for growth. A light harrowing after the drill is sometimes advised for fear that the drill covers part of the clover seed too deeply.

Summing the whole matter up it may be said that two things are of vital importance, namely, early sowing in order that there will be plenty of moisture in the surface soil to germinate the seed, and, secondly, a sensible covering if seeding is delayed until tillage operations begin. Do not trust to the rains to cover the seed because too great a part of it will be left bare and seed is too high in price to take any chances in losing part of it.

WISCONSIN FARMER POLAND CHINA TROPHY.

The Wisconsin Farmer offers each year a loving cup in the futurity class for Poland China hogs at the Wisconsin State Fair, Milwaukee. This is a picture of the cup which has been selected this year and which will be won at Milwaukee next September by some good hog breeder of this state. The swine industry in Wisconsin is developing rapidly and The Wisconsin Farmer is glad to have its part in the good work.

Studying the Facial Expression of Animals.

It is very difficult to describe the form of pleasure that many stockmen derive from their association with their charges. There is a form of affection developed in the heart that is closely akin to that engendered by human appeal. Those of our readers who enjoy this intimate association with improved farm animals will find pleasure in the following description of "expression in animals," as it is given by a writer in a recent issue of the London Live Stock Journal:

Except to those intimately acquainted with sheep there is little facial expression, but with animals more associated with the daily life of men there is much of interest. The best focus for a horse is the ground he is about to step upon, and there he can see a stone that might cause him to fall. The expression of his face then is not so "speaking" as that of the dog at short range. Apart from other things the same disability of a long focus applies to cattle and other large animals. The pig is often called stupid for the very opposite reason. His focus is short owing to his environment, and ancestors confined within the narrow limits of a sty with no view beyond. He can be educated into a charming companion, and then develops facial expression, movements of the ears, gestures and attitudes which, taken together, and particularly in dogs, convey the thoughts and wishes of the animal to those at least who love animals and study them.

It is not perhaps the easiest thing in the world to describe expression when one has watched it for a lifetime and desires to do so, but there are certain conformations in horses that can be said to indicate character To the head, of course, we look chiefly, but there are points about bodies and limbs which also indicate capacity; and even with men we are troubled to separate capacity from character. Take, for instance, what is called a Roman nose. How seldom is it associated with anything but an amiable disposition? The massive Shire, with a somewhat arched face from above the level of the eyes to the muzzle, will almost surely combine courage with docility, and so a Roman nose is generally liked in most breeds. We may conveniently consider the opposite shape here—the animal with a depression midway between the eyes and mouth. This feature alone may indicate a dull temperament or disposition to sluggishness if associated with much bone over the eye and coarse lids with a hollow above. Hollows may, however, exist in any horse, young or old. They come to most old horses, but may be present in young ones if one or both parents were old at the time when begotten, and this feature must not be taken alone to be of much significance. If the hollow exists with a heavy brow the depression of the face previously mentioned, plus a bumpy forehead—that is to say a convex skull above the eyes—the animal is very likely to be a sulky and vicious one, or at best of uncertain moods and unreliable.

What are known as pig eyes, small in proportion to the animal and deep set, are associated with meanness and want of courage, perhaps with obstinacy, which may take the form of jibbing rather than the more daring vice of kicking in harness or saddle. The mean-eyed animal, if a kicker at all, is likely to be a cow-kicker, that lets fly with one foot at a passer-by in the stable who has given no greater offense than that of coming "between the wind and his nobility." The bold eye, large in the globe, and with light brows and thin skin and long lashes, is regarded with good will by buyers as likely to have courage combined with good temper, but the prominence must not be too great, or he belongs to the class known as buck-eyed, and with the same disability as humans with that conformation—namely, short sight owing to excessive convexity. Short sight in a horse often causes shying, because the animal comes upon objects he cannot focus in time to know whether they are dangerous or not.

No words of ours need be added to strengthen the appeal which this description makes to breeders. We like the phrase, "charming companion," though in this instance it refers to the lowly hog, and sure enough it is that every man who is a stockman by instinct is able to interpret every gesture and every attitude of the animals under his care. Their welfare depends upon his ability to do this, and there are thousands of breeders in the corn belt who get into the spirit of their business just in this way.

Believes in Liberal Feeding.

While the beginning of the 1917 foaling season is a few weeks distant, we believe it is quite in order to make a suggestion in regard to the handling of a colt. At this time one of our subscribers, Mr. George Lewis, briefly outlines his method of handling colts. In the first place, Mr. Lewis works his draft mares and the colt is kept in the barn whenever the mare is in the harness. The little fellow is fed oats liberally; in fact, all the oats that he will consume during the first year. This builds up a sturdy frame and it means good muscular development, thereby insuring full growth. This subscriber believes that blunders are frequently made in feeding methods simply because grain is fed too sparingly and the mature horse, as a result, is possibly several hundred pounds lighter than he would be if he had been handled differently. He believes in breaking them to harness as two year olds and working them lightly. They will do better in most cases if they are worked, because they are then fed grain and the labor will pay for their keep.

This is good, wholesome doctrine and now that American breeders have settled down to the production of their own pure-bred breeding stock it is of the utmost importance that this lesson of liberal feeding be driven home. It must be remembered that in the main the draft horses of France, Belgium, England and Scotland are not produced by large breeders, but rather by men who have one or two or three mares, but these men understand the fundamental principle involved in raising colts. This is the end to be desired in this country and if we develop the pure-bred draft horse industry it is devoutly to be wished that the bulk of our drafters shall be raised by what might be called the small farmer. A good mare eats no more food than a scrub and in these days of heavy implements there is a real advantage in putting lots of weight into the collar at all kinds of farm work.

Graduates in Dairy Course.

The annual winter dairy course of twelve weeks came to a successful finish in the graduation of 150 young men who came to the Wisconsin Dairy School for training in the making of butter and dairy products. They came from forty-one different counties in the state and several outside states. There were men there from Illinois, Iowa, Minnesota, Michigan, Oregon, California and New York. In his farewell address, H. L. Russell, dean of the college of agriculture, tried to impress upon the minds of the outgoing class the importance attached to their calling in raising the standards for dairy products throughout the state. By suggestions nad demonstrations these dairy students can become a powerful influence in a community. Dean Russell called the attention of the students to the fact that 3,385 men have graduated since the course was begun in 1890 and that if these graduates had not helped in educating the producer to the value of cleaner and better dairy products Wisconsin today would not be enjoying the reputation of being the leading dairy state. F. H. Farrington, in charge of the course, also addressed the students, urging them to work faithfully for the betterment of dairy conditions. G. H. Benkendorf, secretary of the Wisconsin Dairy School Alumni Association, stated that 90 per cent of the former students of the institution are actively engaged in dairy manufacturing. Eighty per cent of the graduates are employed in Wisconsin as dairymen in some capacity or other.

There is no trouble in placing these men and Mr. Farrington even now sees a shortage of competent creamery help coming on. An extraordinary demand for practical cheese and butter makers added to the great extension of the condensed milk and ice cream trade is responsible for this.

Wisconsin has set an admirable record in holding the interests of the graduates to the subject taught in the course. Hardly a profession that can show more than 50 per cent of graduates actually engaged in the business. Here 3,385 students have lost only 10 per cent of their number. Of the graduates, only 277 came from other states. The registration cards show these 277 to have traveled far to enjoy the excellent course of the institution, the men coming from Canada, Japan, Argentine, Norway, Mexico and South Africa.

You can stand at one end of a row of 50 cows, throw a single lever, and lock them all in their stanchions, or release them—if you use West Bend Swinging Stanchions and Cow Stops. With the same equipment you can release any cow or lock her in separately. It's the greatest idea of the kind ever conceived. With this equipment you can lock in or release, 50 cows in the same time you would individually spend on one cow, with ordinary equipment.

They Can't Get Their Heads In Wrong

The West Bend Automatic Cow Stop prevents the animal putting its head any place but the right one. West Bend Barn Equipment costs no more than the "other kind"—but there is no comparison between them. We manufacture a complete line of barn equipment—stanchions, stalls, pens, litter and feed carriers—all illustrated and described in our book which we will be more than pleased to send you free of charge.

Write Today For This Free Book

It shows you the entire West Bend line of sanitary, modern barn equipment—illustrates everything—shows you clearly just *why* so many money-making business farmers are installing West Bend equipment in preference to any other. Get this book now—let it help you plan your barn right. Your free copy is here awaiting your request. Write today—a postal will do.

THE PRICE OF ADVERTISED GOODS.

Tendency Always to Lower Rather Than to Increase It.

Two prominent business men were talking things over not long ago. One of them asked the other, "What is the most common delusion in the business world today?" Instantly came the reply, "The idea that advertising adds to the price of goods."

Every now and then some manufacturer has the hardihood to say that he can sell his goods cheaper because he doesn't advertise. Every one who knows the A. B. C. of business knows that this claim is impossible on its face. Yet it sounds plausible and such talk deceives millions of people.

Forget all these sophistries and listen now to the plain commonsense of the matter.

In the production and marketing of goods there are two inevitable costs. One is the manufacturing cost; the other is the selling cost. And no way has ever yet been found by which either of these costs can be eliminated. Mark that.

Whether you buy farm products at a grocery store, or mill products at a dry goods store, or laboratory products at a drug store—whatever you buy at any store, be sure of one thing: The price includes the selling cost. It must, else the manufacturer, the wholesaler, the retailer and the salesman could not live.

And just as surely as there are always two items of cost, the manufacturing and the selling, just so surely are there only two ways in which the price of goods can ever be reduced.

One is by economics in manufacturing cost. The other is by economics in selling cost.

Of course, it isn't easy to cut manufacturing cost without cutting the quality.

But in modern times a way has been found to cut selling cost—and its name is Advertising.

Advertising is like a straight line, the shortest distance between two points—the producer and the consumer. It cuts out the grades, curves and the angles. It makes a drop of ink do the work of a salesman. Bear in mind that goods can never be sold unless there is a demand, and advertising creates this demand in the simplest, most direct and least expensive way. No other sales method can equal it in magnitude of return for a minimum of cost.

And the big returns from advertising also cut down the manufacturing cost—that's another saving. Increased volume of production always means a decrease in the unit cost of production through better and more efficient manufacturing methods.

The Association of National Advertisers has recently been gathering some remarkable facts and figures on this subject. They show how one after another of the big advertisers of the country have been able to reduce the price of their product, or else to improve the quality at no increase in price. It is a significant fact that nationally advertised goods are the only product which, as a class, have not tended to rise in price during the past few years.

Countless causes are working today to force prices up. We all know this by sad experience. Against all these forces one force only is working to keep prices down—and its name is Advertising.

I want ten men in every county right now to accept my special co-operative offer. It will help you obtain a Sheldon Batch Mixer at little or no cost. Let me tell you about it.

You probably need a mixer for concreting on your place—most farmers do. The Sheldon is the ideal mixer for the farm. Light and easily portable, durable, low-priced. You'll find it will prove a mighty good investment. Write for special offer.

You can easily earn $8 to $20 a day with a Sheldon Batch Mixer. Our customers are doing it right now. The jobs go to the man with a Sheldon Mixer every time. Saves labor of 1 to 4 men, according to size of job. Or, if you buy a machine for your own use, you can make many times its cost in a season by renting it to neighbors.

Improve Your Farm

Build your own silo, tanks, troughs, floors, foundations, buildings, etc., out of concrete with a Sheldon Batch Mixer. Will pay for itself on first small job. Beats hand mixing a mile. And it's a lot cheaper too. Takes the backache out of concrete. Makes possible those many small improvements on the farm that you wouldn't do without. Improvements which will add many dollars to the value of your land.

Get My FREE Catalog

Tells how to build your own mixer by using the *Free Plans* which we send with our iron parts. Also shows full line of built-up machines. Two styles, hand and power. Will mix 2 1-2 cu-ft. a minute. Keeps 1 to 6 men busy. Chain drive, self-tilting dump, all parts guaranteed. Write today for catalog and special offer. Geo. C. Sheldon, Pres.

A Cheap Poultry House.

To the Editor:—It cost only $10 to build this poultry house. Sounds quite reasonable, doesn't it? It was actually accomplished, however, on the farm of A. C. Martin, of Fairchild, Wisconsin. The building is 10x18x10 feet high at the front. It has a two-ply felt roof, cement floor and foundation, and tar paper between double boarded walls.

Numerous tumble-down buildings and board fences were scattered about the farm when it was purchased. These were torn down and replaced by new buildings and wire fences. The old boards were thrown on a pile to be sawed into firewood.

A new chicken house was needed. The present high cost of living made

This poultry house was built at an actual cost of $10, on the farm of A. C. Martin, of Fairchild, Wisconsin.

it especially necessary that the dollars go as far as possible. So the material had to come, largely, from the scrap pile, which indeed did not look very promising at a casual glance.

Many of the boards, however, were perfectly sound with the exception of rotten ends, which were cut off. Thus enough good, sound lumber was obtained to double board and sheath the building. The balance of the boards were sawed, split and ranked away for summer wood and kindling.

No particular frame was used—just a front sill, rafters, and a few pieces of 2x4's between the windows. The boards of the walls, running vertically outside and horizontally on the inside, were well nailed together, making firmly braced walls.

Old window sash, found about the place, and from remodeling the dwelling house, were repaired and used in the poultry house. They made four full windows which give lots of sunlight from the south.

The interior was divided into two parts, a main room and a smaller one

The lumber for the poultry house had to come from the old scrap pile, which did not look very promising.

for scratching pen in winter and a hatching pen in the summer. A nearby thicket furnished birch poles for roosts which were hinged at the back that the cleaning of the building might be an easier process.

Cement, roofing and tar paper were the only materials purchased. That made a saving of nearly $50 even on the cheaper grades of lumber. The lumber used was native-sawed white pine, and, while the boards are old, they will last longer than most new lumber one gets these days.

A few wire nests, hot lime sprayed on the walls and roosts, a little sawdust on the floor, and the fowls were introduced to their new quarters; and they don't care how many pictures old Jack Frost paints on the windows.

In appreciation of their change from a dark, damp, dismal hut to this sunshiny parlor they began immediately to color their combs a dark red and cast shyly reminiscent, yet hopeful, glances at the wire nests hung for them. Ere long their hopes were realized.

E. W. Martin.

PAIGE

The Most Beautiful Car in America

PAIGE cars are made in two sizes. There is a seven-passenger, 51-horsepower model which sells for $1495. There is also a five-passenger, 39-horsepower model which sells for $1175.

The "Stratford" model is, of course, considerably larger than the "Linwood." It is well worth the difference in price. But we want to point out at this time that both cars are *Paiges*—blood brothers of the same strain.

So far as a choice between these two motor cars is concerned, it is simply a matter of your individual requirements. If you can advantageously use a large, sumptuous, seven-passenger automobile, by all means invest your money in a Paige "Stratford-51."

On the other hand, if a five-passenger model is ample for your purposes, then, decide on the "Linwood-39."

It is merely a choice between a one karat or a two karat diamond. Both cars are clean cut, flawless gems. In their respective price fields, these two cars represent the *utmost* that you can secure in automobile value.

We are putting the matter before you in this frank way, because we want to be genuinely helpful. We also want to emphasize—just as clearly as we possibly can—that Paige builds only *good* cars—quality cars.

But—above all—make it a point to see the Paige line before you buy *any* car. As a business man, you can't afford to overlook the two greatest dollar-for-dollar values in the entire automobile field. This is a broad, sweeping statement, but you can establish the facts to your entire satisfaction.

Will you make it a special point to see "The Most Beautiful Car in America?"

Stratford "Six-51" 7-passenger - $1495 f. o. b. Detroit
Linwood "Six-39" 5-passenger - $1175 f. o. b. Detroit

Soon Time to Use Fanning Mill.

Wisconsin Farmer Cannot Afford to Plant Poor Seed—By Henry Lunz, of Wisconsin Experiment Station.

HIGH yields are one essential to meet the increased cost of production and star boarders or loafers cannot be tolerated in the granary any longer than in the dairy. Loafers are as common in plant as in animal life, and upon their extermination depends to a large degree our profit. Not only must the seed we sow have good ancestry, but it must be strong and healthy representatives of such parent stock. Small, immature, or diseased seed, no matter how good the ancestry, is of little value for reproduction. It is essential that we fight the battle against adverse weather conditions, disease and insect pests with strong, healthy stock. The weather is beyond our control, insect pests and disease can be controlled only to a certain extent, but we can largely overcome these by selection of good seed stock.

The stockman judges the future production of an animal by personal examination of each individual, and past records of both it and its parentage. In seed selection, examination of each individual is impossible, and thus some mechanical means of separating the poor prospects from the good is necessary.

Mills for separating and cleaning seeds have been in use for many years. Before the advent of the hand-turned mill, farmers used to take advantage of windy days and clean their grain by pouring it from one bucket to another, thus allowing the wind to blow the chaff aside as the grain fell into the lower container.

The modern fanning mill is almost a wizard when it comes to cleaning and separating seeds. The right mill in skilled hands will do seemingly impossible things.

Seed separation depends upon difference in size and difference in weight. Some machines take advantage of one of these principles and others both. According to size seeds are separated by sieves; according to weight by a blast of air that can be regulated to suit the operator. The best mills take advantage of both size and weight and make each separation separately. The mill that most successfully cleans grass and clover seeds allows no wind to strike the sieves. The seeds are first separated according to size and afterward according to weight.

The best sieves are made of some non-rusting material as zinc, in which the holes are made by perforating the plate with a punch. Wire sieves are sure, sooner or later, to spread in places, thus destroying their efficiency.

Advertisers often claim simplicity for their mills, with the statement that anyone can operate them. In many cases it is nearer the truth that any factory can make a fanning mill, but it takes an expert to operate one.

Many mills are too complicated. No mill should divide the original sample into more than two or three grades. It should be well balanced, having as few moving parts as possible. Ease of running and efficiency is increased if the speed of fan can be varied without changing that of sieves, thus bringing blast under more perfect control. Sieves should be of easy access for purposes of removal and cleaning.

The operator should study the mill and directions sent with it by manufacturers. The top sieve should be just large enough to allow the seed that is being cleaned to pass through, and the lower sieve just small enough to keep them from pasing through. After this separation the seed, which is of an even size, drops into the blast, where the light seeds are blown out. The heavy ones drop into a receptacle provided for them. One secret of good separation is uniform speed of the mill, and this is difficult to obtain with hand power. A small gasoline engine saves a backache and enables one man to do the work of two, and do it better.

After separation the good, strong, healthy seeds are available for seeding and being of good weight they contain sufficient nourishment to carry the seedling through until it is able to take care of itself.

Not only are the best seeds available for sowing, but the light and immature lots that contain considerable food value are available for feeding purposes. If these were sown the possibilities are that they would not grow, or fail to produce a new plant.

Get at that mill now and clean your seed grain for next spring's planting. It will pay, and pay big.

POWER MILLS MAINTAIN UNIFORM SPEED AND DO QUICK WORK.

FRESHENING time is the most critical period in the life of a cow or heifer. No injury or sickness has such disastrous results as failure to properly clean. Many cows, especially heifers, retain the afterbirth. If allowed to remain, disease and blood poisoning may follow. If you forcibly remove it, some parts of the afterbirth will remain. These parts decompose and are absorbed by the animal, causing a rapid wasting of flesh and loss of milk. Avoid all danger by using

DR. DAVID ROBERTS'

COW CLEANER and ANTISEPTO

Cow Cleaner stimulates the circulation in the blood vessels of the genital organs, causing the afterbirth to ripen and come away of its own weight, leaving the organs in a healthy condition. Cleanse the genital organs with Antisepto—it is cooling, soothing and healing, all of which are essential to health. Keep your cows in a healthy breeding condition. Give them the help they need at this trying time.

Cow Tonic. Aids digestion, increases appetite, tones and keeps animals in condition.

Calf Cholera Remedy. Prevents scours and calf cholera. Avoids stunting. Keeps calves growing.

Breeding Tonic. Acts on the genital organs and puts in condition for breeding. Makes getting with calf more certain.

There is a Roberts' medicine for every animal ailment. Over 500,000 copies of his great book (184 pages), "Practical Home Veterinarian," are already in the hands of live-stock owners. Send $1.00 for your copy today.

Go to your druggist. Buy Dr Roberts' animal medicines and tonics. Nearly 4000 drug stores carry them. Look for and insist on getting the package that bears Dr. Roberts' picture. If your druggist hasn't Roberts' goods, write us direct. Give us his name. We will see you are promptly supplied.

In and Around Wisconsin

Mr. H. Zimmerman, of the Barron Creamery, Barron, Wisconsin, received $187.20 in cream checks for the month of December last, being the head of the list of patrons. There were twenty-eight in the December list who received over $100.

E. L. Liddle has given up his post at the La Crosse County School of Agriculture and accepted a position in the Milwaukee County School. Mr. Liddle is efficient in handling live stock. He will take the place of John Ooesterhuis, at the Milwaukee County School.

Supt. E. L. Luther, of Farmers' Institutes, has recently sent out copies of the annual bulletin, reviewing the work of the past year. This book contains a great deal of practical information, and is known as Farmers' Institute Bulletin No. 30. There is a limited supply of these bulletins on hand and they may be secured by writing to Mr. Luther.

The Wisconsin Sugar Company has decided to pay $7 per ton for sugar beets contracted now for 1917. This cuts out the proposed bonus plan which provided a contract for $6 per ton next autumn for beets, with better pay in case sugar remained at certain prices or advanced. The new $7-a-ton contract is not based on sugar prices and is made without any reservation. There is little chance of sugar getting cheaper before next autumn, and it is not likely to be cheaper then unless the European war stops. There is said to be a small acreage of beets in the best countries of Europe, but what is more to the point, there is practically no opportunity for shipment; hence, this source of sugar supply is cut off. At the new prices the growers expect to make a good thing out of the sugar beet the coming season and there is a good chance for the acreage to be increased.

Sixteen cows in the Geo. Minshall herd, at Plainview Stock Farm, Walworth county, produced 1,569.92 during the month of December last. The average production of milk for these Holsteins was 1,721 pounds. One cow gave 2,108 pounds of milk, testing 3.9 per cent. Her milk alone averaged the owner $1.50 per day.

About $300,000 worth of stock has been sold in the New Richmond packing plant, known officially as the Inter-County Co-operative Packing Company. There are 2,730 stockholders, and the last $30,000 worth of stock has been sold at $110 for a $100 share. The cost of buildings complete is estimated at $144,000, and the added materials, etc., necessary to put the plant in operation will bring this to $165,000. The plant is erected and will be operated in a very short time, the exact date not having been agreed upon at this writing.

W. C. Johnson, official tester of the Baraboo, Wisconsin, Cow-Testing Association, writes that he is recommending better barn equipment to the members of the association. He advises members of the association that the old wooden stall is an ideal place for breeding insects and for diseases to get a start. Furthermore, chores can be done in about half the time with a modern barn. But the most important thing in Mr. Johnson's judgment is that the modern barn makes the cows more comfortable, and that is next in importance to proper feeding if the best results are to be obtained at the milk pail.

The Klover Klub, of Sauk county, recently held a working "bee," which resulted in getting enough wood hauled and cut to furnish fuel at the town hall for a year or more. There were about a dozen men engaged with teams. Of course, this was not a very wonderful undertaking, but it demonstrates the spirit which exists in the Klover Klub.

Something of an argument has developed in Winnebago county between some of the poultry breeders and citizens of Oshkosh. Mr. M. P. Woodworth contributed an article to the Northwestern, in which he maintained that at present prices of caring for and housing poultry, 50 cent a dozen was cheap for eggs. An Oshkosh citizen replies that eggs may be worth 4 or 5 cents apiece, but that the farmers do not take enough care to sell good eggs at these prices. The average city man will not kick so much on the price of eggs as he will on the quality. As a general proposition, the grocer in town is afraid to guarantee eggs. This means that the farmers will not bring their fresh eggs, or at least that he has not enough confidence in the eggs to make him like to guarantee them. The discussion raises the old question as to quality and price. Strictly first-class eggs will bring a high price today anywhere in the United States. We refer to eggs which may be absolutely guaranteed as fresh. No farmer poultryman who will put up eggs daily will have any trouble in selling them as fast as he can get them. Neither does he need to worry anything about the price.

The Fifty Pound Cow at Last.

Segis Fayne Johanna, a Holstein Cow, Owned by O. Cabana, Jr., of New York, Sets a New Butter Production Record.

THE pure-bred Holstein-Friesian cow, Segis Fayne Johanna 114658, realized the long-cherished hopes of enthusiasts and electrified the dairy world when, under an official seven-day test ending January 8th, she established a new world's record for butter fat production, producing in seven consecutive days 730.8 pounds of milk, containing 50.68 pounds of butter. This remarkable animal has scored a brilliant triumph for the Black-and-White breed.

The pessimist had for years scoffed at the optimist's prophecy that some day a cow would surmount the 50-pound barrier, but with Segis Fayne Johanna's accomplishment what seemed the "almost incredible" has happened.

Segis Fayne Johanna is the property of Oliver Cabana, Jr., proprietor of Pine Grove Farms, Elma Center, N. Y., and was bred by A. A. Cortelyou, of Somerville, N. J., having been purchased by the present owner at a breeders' sale on January 5, 1913. She is eight years old, weighs now about 1,450 pounds, and in color is four-fifths white. Her sire is King Fayne Segis 46767 and her dam is Vikina Johanna 64385.

The new seven-day butter champion, the sixteenth Holstein-Friesian cow to obtain a place in the 40-pound class, is the fifth world's champion to be developed at Pine Grove Farms, so a brief resume of the methods of feeding and care in operation at this noted establishment, particularly those employed in the test of Segis Fayne Johanna, is of extraordinary interest.

The test was made in a roomy, clean, white-enameled stall, under the supervision of representatives of the New York State Agricultural College, at Ithaca, N. Y. She was milked every six hours. From the time she went dry to ten days before freshening the new champion received the customary rations used at Pine Grove Farms, consisting of thirty pounds grain, forty pounds beets and thirty pounds of beet pulp soaked in molasses. She was then fed a test ration of sixteen pounds, increasing gradually to twenty-five pounds, consisting of the following mixture:

200 pounds dried distillers' grains,
100 pounds bran,
100 pounds ground oats,
125 pounds gluten,
100 pounds cottonseed meal,
80 pounds oil meal,
15 pounds table salt,
10 pounds charcoal.

On the third day after freshening she was given sixteen pounds of grain until the sixth day, when two pounds were added, which was systematically increased to thirty-one pounds. Two pounds of cottonseed meal was also provided and, with the following, made up the balance of the ration:

40 pounds ensilage,
100 pounds roots,
32 pounds beet pulp,
12 pounds hay.

Rock salt and plenty of water were accessible to her at all times.

The test began December 28, 1916, and the verification and observation tests began at 4:30 p. m. on January 2d and continued for forty-eight hours. During the period the following supervisors were in charge: Ray Huey, Spencerport, N. Y.; R. V. Callahan, Clyde, N. Y.; S. H. Waldo, Castile, N. Y.; C. F. Mason, Seneca Castle, N. Y.; and F. A. Linzy, Darien Center, N. Y.

A study of the following certified table, giving in detail the milk and fat taken daily from December 28th to January 8th, will prove of interest:

Date		Lbs. milk	Lbs. fat	Lbs. butter
Dec.	28	97.9	5.667	7.083
	29	101.3	6.052	7.565
	30	104.1	5.466	6.832
	31	105.2	5.759	7.198
Jan.	1	104.4	5.743	7.178
	2	105.1	5.785	7.231
	3	104.5	5.776	7.220
	4	110.8	5.698	7.122
	5	107.1	5.361	6.701
	6	108.8	5.494	6.867
	7	108.9	5.338	6.672
	8	109.2	5.737	7.171

The best previous seven-day butter record was 46.772 pounds, established by the pure-bred Holstein cow, Hester Aaltje Korndyke 133222, owned by M. J. Smiley, of Bellefourche, South Dakota.

The flattering success obtained by Mr. Cabana at Pine Grove Farms has naturally brought him into the glare of the limelight. As he expresses it, he went into the breeding of Holstein-Friesian cattle because of the great interest attached to it. He says further: "It means to me the developing of the most useful animal in the world. I find it fascinating to watch the progress and improvements we make through the application of scientific and intelligent breeding methods." Mr. Cabana has long been a prominent citizen of Buffalo, connected with various large business interests. He is an indefatigable worker and, despite his business enterprises which demand so much of his time and energy, he is intimately in touch at all times with the doings at Pine Grove Farms.

FIRST FIFTY-POUND COW—SEGIS FAYNE JOHANNA, OWNED BY OLIVER CABANA, JR., PINE GROVE FARMS, NEW YORK.

The enthusiasm and unison of progressive spirit existing among the Holstein-Friesian cattle breeders is best expressed in the telegram from the owner of the eclipsed record holder which reads: "Congratulations on the 50-pound cow. Now that the impossible has been accomplished, where is the end?"

Wanted: A Newfoundland or St. Bernard Dog.

A subscriber of The Wisconsin Farmer has written us asking where he might secure a good Newfoundland or St. Bernard dog. If any of our readers know where such a dog may be purchased we would like very much to have them inform us so that we can give the information to our subscriber. We would appreciate hearing from anyone who has dogs to sell of the breeds mentioned or from anyone who knows of owners of these kinds of dogs. Send the information to The Wisconsin Farmer, Madison, Wisconsin.

Probably no other field crop requires lime to such an extent as does alfalfa, and with the exception of rather limited limestone areas, practically all of the soils of the United States east of the ninety-fifth meridian require liming for best development of this crop.

Champion Toledo

Dependable Spark Plugs

Champion Spark Plugs are proof against the incessant heavy battering blows of the explosions in your cylinders.

Patented asbestos lined copper gaskets protect both shoulders of the porcelain.

They are absolutely dependable.

They are found as standard factory equipment on 4 out of 5 of the cars built in this country and Canada.

There is a Champion Plug specially designed and built for *every* type of automobile motor, tractor and stationary engine.

Look *on the porcelain* for the name "Champion."

Champion Spark Plug Company
Toledo, Ohio

What You DON'T GET in an Avery Tractor

YOUR success with a tractor depends about as much on what you don't get in its construction as on what you do. Here are some things you *don't get* when you buy an Avery: You *don't get* any fuel pump, water pump, fan, sprocket chains, belts, outside lubricator, counterweights on the crankshaft, third crankshaft bearing, second clutch or intermediate gear or shaft. All these trouble-makers were eliminated when the Avery Tractor was designed.

What You DO GET

You *get* a powerful, low-speed, long-lived, special opposed tractor motor—a crankshaft so strong no owner ever broke one—renewable inner cylinder walls, patented sliding frame, two-speed gear, all spur gear transmission, four wheels, double drive. Avery Tractors are built by a company owning a large factory and many branch houses where complete repair stocks and a service force are maintained. The Avery line includes five regular size tractors—8-16, 12-25, 18-36, 25-50 and 40-80 h.p., and special 5-10 h.p. Plows and Threshers in all sizes—and Two-Row Motor Cultivator. *Write for a FREE copy of the new 1917 Avery Catalog* and name of nearest Avery dealer.

F. A. Gaiser,
Official Tester Wrightstown-Greenleaf and Brillion Cow-Testing Association.

Stanley Association.

To the Editor:—We have been doing some work in cow testing in the Stanley Association. In September we had four cows producing forty pounds of butter fat or better and in October six. In October we had 345 cows under test; twenty cows found to be unprofitable, eighteen were sold for dairy cows. I have tested one cow which averaged 9.2 per cent of fat and also averaged 13.7 pounds of milk for three months.

The following table gives the names and records of the cows in the assosiation which have produced forty-five pounds of butter fat or over during the two periods of thirty days each, ending December 31, 1916:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
Frank Smalley					
Rosetta, R. H.	5	10-19-16	1620	4.2	68.0
Rosetta, R. H.	5	10-19-16	1770	4.1	72.6
Geo. Weissenberg

P&O

LIGHT DRAFT PLOWS

Built for the Field Test.

Three-Quarters of a Century of "Knowing How" Hammered Into Every One of Them.

The product of the Parlin & Orendorff Co. has always been noted for simplicity of construction, great strength and ease of operation. It was upon such a basis that the founders of this business made their implements, established their reputation, and built their factory. It is upon the same foundation that the business has been carried on to this day, and in 1917 we celebrate our Diamond Jubilee; 75 years of practical experience gained through constantly striving to provide for the exacting requirements of three generations of American farmers.

For an even three-quarters of a century we have met the demand, and today we operate the largest and oldest permanently established plow factory in the whole world. "It's the way we build them."

P&O

Light Draft Plows, Harrows, Planters and Cultivators are made in all types and sizes, to meet the conditions in all sections, and are Backed by an Unqualified Guarantee.

We also make the most complete line of Traction Engine Plows produced, and we have a special catalog devoted to these famous plows.

The P&O Little Genius Engine Gang Plow

was the most popular plow shown at all points on the 1916 National Tractor Demonstration.

We will send P & O Catalogs to any address. While P & O Implements are sold only through established implement dealers, we welcome correspondence from farmers in all sections.

Smooth, Clean Potatoes

First rid your seed potatoes of scab and black-leg diseases before planting and you can be assured of a 30% to 40% increase yield.

FORMALDEHYDE
The Farmer's Friend

is *the* official standard seed cleanser. Potato scab and black-leg once in the ground may persist for many years. The U.S. Dept. of Agriculture recommends cleansing seeds with Formaldehyde solution to prevent spread of potato diseases. It destroys smuts of grain and fungus growths. One pint 35 cents at your dealer treats 40 bushels of seed. New and illustrated book sent *free*.

PERTH AMBOY CHEMICAL WORKS
100 WILLIAM STREET NEW YORK 5

Year of Years to Plant Potatoes Let the Aspinwall Do the Work

The *only* correct drop. *A one-man, Automatic Potato Planter.* Saves expense of extra man. Does *all* the work—*all* the time. Plants *more acres* per day—opens the furrow, drops the seed, any size, any distance, marks the next row—all in *one operation.* 65,000 now in use. Plant the *Aspinwall way.*

Aspinwall No. 3 Potato Planter

Corn, pea, bean and fertilizer attachments furnished when wanted.
Send today for FREE BOOK giving facts how to plant for profit.

FARM MECHANICS

Questions and Answers.

Types of Motor.

What is the poppet valve of a motor? What kind of a motor is the "L" type? What kind is the "T" type? Is there any other type of motor made with four or six cylinders?

Answer.—There are two kinds of valves in use on gasoline motors. The poppet valve is the common kind and is shown in V in the figure. The other kind is the slide valve, one form of which was illustrated in these columns a few weeks ago. The "L" type

of cylinder has both inlet and exhaust valves located on one side of the cylinder. The diagram illustrates a cylinder of this type. The "T" type has the inlet valve on one side of the cylinder and the exhaust valve on the other side. This makes the general outline of the cylinder like a T; hence its name. These two types are classed together as "valve in the side" motors. The other type is the "valve in the head" motors, in which the valves are located above the cylinder.

Grinding Valves and Adjusting Bearings.

I wish to ask a few questions in regard to my Continental motor. How should I proceed to grind the valves? Is it necessary to take the motor all apart to do this? Also please tell me how to take up the bearings. How can one tell when they are tight enough?

Answer.—To grind the valve of any motor the first thing necessary to do is to remove the valves. The majority of motors have a screw plug over the valves, the plug being unscrewed when the valve is being ground. Other motors, like the Ford, have removable cylinder heads. This is true of all valve-in-the-head motors, unless the valve is located in a removable cage. The figure shows a sectional view of the ordinary cylinder through one of the valves. P is the plug over the valve, which must be removed to grind the valve. V is the valve; G is the valve stem guide; W is the valve spring washer; C is the key or split collar that keeps W in place; S is the tappet adjusting screw; and R is the tappet or push rod. To remove the valve it is necessary to pry up on the valve washer, W, and remove the key or collar, C. For doing this a half-inch rod about fifteen inches long with a fork at one end, the fork being the proper size to fit around the valve collar is very handy. A chain and hook is slipped over the rod. To use the tool, insert the hook in the hole over the valve or around the manifold; slip the fork under the washer, W, and pry up. The slot in the fork must be large enough so that the key or split collar will go through it.

Having removed the valve, carefully file off any shoulders worn on the valve seat, using fine file. There are many valve-grinding compounds on the market. A good compound is made from emery flour and oil, mixed to the consistency of thin cream. Rub a little of this compound on the valve seat; insert the valve in the cylinder, and by means of a screw driver in the slot in the head of the valve, turn the valve back and forth about a third of a turn, lifting the valve from its seat every few turns and changing its position occasionally. Be careful not to get any of the emery into the cylinder, as it would ruin the cylinder. A spring inserted under the head of the valve to raise it is a great help.

After grinding about five minutes, remove it and wipe the valve and the valve seat in the cylinder clean. Make many light chalk marks on the seat of the valve, insert it carefully in the cylinder, and rotate it about an eighth of an inch back and forth, using some pressure. If all the chalk marks are rubbed off the seat the valve is perfectly ground. If one or more chalk marks remain across the seat there is a low spot and the grinding should be continued.

Loose bearings may be tightened by removing shims or filing off the face of the bearing cap. If the cap is filed great care must be taken to take off an equal amount of metal all over the face, otherwise the bearing will not fit the shaft correctly. How tight to fit the bearings depends largely on what the bearing is made of. Bronze bearings must fit the shaft rather loosely. Bearings having a bronze back with a babbitt lining should fit the shaft so that there is a slight drag. Babbitt bearings should be fit so that there is a decided drag as the shaft is rotated. New bearings must be adjusted tighter than old ones, as the hammering of the crankshaft compresses the metal of a new bearing more than it compresses the metal of an old one.

When the valve has been ground, clean the valve and cylinder very thoroughly, oil the valve, and replace it in the cylinder. After the collar, C, has been put in place see that there is a distance equal to the thickness of a newspaper between the end of the valve stem and the top of the push rod adjusting screw, as the grinding lets the valve down lower.

Using Coal Oil in Radiator.

How would it do to use coal oil in an auto radiator in place of water? I have heard some people say they have used it with good results in cold weather. Is it dangerous to use a torch to warm up a carburetor and manifold?

Answer.—Low-grade kerosene or coal oil may be used in a radiator on an auto or tractor in the wintertime, but we have always discouraged the idea on account of the danger of fire or explosion. It also soon ruins the radiator hose. If coal oil is used great care should be taken not to bring a flame near it, as an explosion may result. We know of such an explosion occurring even with alcohol in the radiator, the car and garage being a total loss from the fire that resulted. It is dangerous to warm up a carburetor with a torch. A teakettleful of boiling water poured on the carburetor will warm it up without the danger of an explosion.

Generators For Automobiles.

Would you please give the addresses of the firms that make the Delco and the Westinghouse generators for automobiles?

Answer.—The Delco system is made by the Domestic Engineering Co., of Dayton, Ohio. The Westinghouse system is made by the Westinghouse Electric Co., Pittsburgh, Pa.

Lights Burn Out.

I have a Ford car that has been run about 200 miles. During that time it has burned out five headlights. I put in two new bulbs and it burned them out before it had gone a block. Is there something wrong with the magneto? The motor works perfectly. Would bulbs of higher candle power work better?

Answer.—Your magneto is all right; in fact, it is too good! The lights burn out because at high speeds the magneto furnishes a higher voltage than the lights will stand. Obtain bulbs rated two volts higher than you are now using. If this does not stop the trouble use bulbs of still higher voltage. The bulbs should be the same candle power as you are now using.

Come to Detroit
The Automobile Center and
LEARN THE AUTOMOBILE BUSINESS

33,000 sq. ft. of additional floor space

Detroit trained men get preference and get jobs quickly. No other city can give what Detroit offers. Think what it means to learn in the Michigan State Auto School. Factories endorse our school, glad to employ our graduates or offer them territory in which to sell cars and start garages. Unlimited opportunities. You're right in the middle of the greatest auto activities. Men are needed everywhere as testers, repair men, chauffeurs, garage men, and salesmen. Hundreds of our graduates start in business for themselves.

Earn $75 to $300 a Month

We teach you to handle any auto proposition. You graduate in from ten to twelve weeks. **Our equipment is complete.** Students actually build cars from start to finish, getting factory training in assembling, block-testing, road-testing, everything. Special complete course in Oxy-Acetylene brazing, welding and cutting separate from regular course. All leading types of starting, lighting and ignition systems in operation. Learn to time motors, rebore cylinders, adjust carburetors, magnetos, valves and bearings quickly and accurately. Six-cylinder Lozier and 8-cylinder King are used for road instruction. We have a new Chalmers "6-30" chassis with 3,400-r. p. m. motor, the latest thing out, also a 1917 Detroiter-6, and an Overland. Just added Delco System as used in Buick, Hudson and Packard Twin "6." We have also installed a 1917 Willys-Knight complete chassis in the shop for students to work on.

Detroit Is the Place to Learn---Start Any Time

There are 44 auto factories in Detroit, and 140 accessory and parts factories. Our students have the privilege of going through any or all of them. We now **operate Westinghouse Auto-Lite and Bijur Service Stations.** After careful consideration the Westinghouse Electrical & Mfg. Company, the Auto-Lite Company and the Bijur Co. decided that our school was the best place in Detroit to handle their service stations. This has added thousands of dollars' worth of equipment and makes our electrical department unequaled. Students get actual experience and training in handling all kinds of electrical auto equipment and taking care of trouble. We have just installed a Sprague Electric Dynamometer for block-testing purposes for students' use. Auto factories need Dynamometer men constantly. We have a greater demand for our graduates than we can meet. Factories and Garages are paying big salaries to men who **know** how to handle electrical equipment quickly and properly. Detroit is the automobile center. You get practical instruction. Come to our school and learn the auto business right. School open all the year. Enter classes any time, any day. Three classes daily: Morning, afternoon, evening.

There is a great demand for Michigan State Auto School students. Garages throughout the country write us for men. Auto factories write and phone for men constantly to fill permanent places. Why not fit yourself for one of these good paying positions?

Money Back Guarantee

We guarantee to qualify you in a short time for a position as chauffeur, repair man, tester, demonstrator, garage man or automobile dealer, paying from $75 to $300 monthly, or refund your money. We have constantly more requests for Michigan State Auto School Graduates than we can supply.

Follow the Crowd to the Michigan State Auto School—Come to Detroit.

This Is One of the 1916 Classes.

Factory Co-operation We have completed arrangements with the Auto factories to put them in touch with men who intend going into business for themselves. Think of getting inside information as to the best territory and where the garages will make the most money. The factories are looking for trained men to represent them. Men who know the auto business from A to Z are in biggest demand. Come here and start right—get the information first-handed and don't wait.

Act Quickly—Now—DON'T WAIT Fill in the coupon and mail it now. Get full particulars and "Auto School News" and New Catalog. They are both absolutely free. Or better still, jump on the train, as hundreds have done, and come to Detroit, the "Heart of the Automobile Industry," and learn right.

Additional Building and Equipment 33,000 sq. ft. of additional floor space in our new building, thousands of dollars' worth of new equipment, plenty of room for students to work. This comes with our new building at 687-89-91 Woodward Ave.

Our school has grown by leaps and bounds, students come from all over the world. Men have left after graduating and started business for themselves; others have accepted good jobs both in Detroit and over the country. Their work has proven that we train them rightly. We are constantly adding new equipment. Our students get the best and latest things to work on. Our electrical department is thorough and complete. It is in charge of one of the most competent electrical instructors.

Remember, you can enter classes any time, any day. The price of course is based on giving full value. Therefore we cannot give another course free. Graduates in the complete auto course are competent to handle farm tractors. Act quickly--now. We have no branches. Write or come direct to this school.

UPPER WISCONSIN

Starting a New Farm.

To the Editor:—After reading your paper of January 18th in regard to Governor Philipp's message to the legislature on developing Upper Wisconsin lands, would like to say a few words in regard to these lands and starting a new farm. My experience has been this: If you have but small means to begin with it is better to start with two or three cows and add to the herd as you get land cleared. Then you are to no expense to buy feed. You have plenty of range for cattle from May until the last of October, as there is an abundance of clover and pony grasses on all the cutover lands. As to clearing these lands, I will say three men with a two-horse stump puller will clear two acres per week with the aid of dynamite at a cost of $1.25 per acre cash outlay. Our land is covered with birch, oak and maple and is heavy soil, but the lighter lands can be cleared without the use of dynamite. Our acres are covered with an abundance of wild red respberries and blackberries, around the lakes of which there are 1,200 in Vilas county, cranberries abound and blueberries so that any family need not want for fruits. At this point we are 1,650 feet above sea level. It is called the divide, the most healthy spot in the state. Thousands of people visit these lakes each summer, making a good market for milk, butter and vegetables and poultry.

A NEW COTTAGE BUILT NEAR AN UPPER WISCONSIN LAKE.

OATS GROWN ON A. E. MANNING FARM, VILAS COUNTY, WIS.

If I am not asking too much space would like to say a few words more. That is just this: We are three and one-half miles from the deer park, which the state owns and is spending a lot of money on. As I view it, if they would put that money in an experiment farm of 200 or 300 acres in charge of a first-class agriculturist the money would be used for better purposes and help to settle the country.

Vilas Co., Wis. A. E. Manning.

In Oneida County.

To the Editor:—The cutover lands of northern Wisconsin are fast proving to be of inestimable value to farmers interested in the pursuit of the dairy industry. The climate and crop conditions of that section of the state, combined with an abundance of forage, make it an ideal place for dairy farming and there are already a large number of farmers making profitable use of lands that were once considered worthless for farming.

On a recent visit to Oneida county I was greatly surprised by the progress being made in the clearing and improving of cut-over lands.

THE FIRST CLEARING ON THE MANNING FARM IN VILAS COUNTY

The Tamarack Farm, in the town of Sugar Camp, owned by Brown Brothers' Lumber Company and managed by Charles Kugel, will, at the present time, compete with some of our model dairy farms in the southern part of this state and will in a few years excel them.

They have a fine herd of pure-bred Guernsey cattle, among which are several cows producing 400 pounds of butter annually. Cheese factories and creameries are numerous, insuring a ready market for milk and cream.

Corn, contrary to some people's belief, does unusually well in this section of the state. Some of the best corn I ever saw was grown last year on the farm of F. P. Lowney in the same town. There was better corn grown in Oneida county last year than in some of the more southern counties. There was also an unusually heavy yield of clover and alfalfa. Oats, barley, rye and peas are among some of their most successful crops.

Oneida county contributes largely to the state's yield of potatoes and other garden truck, but the pursuit of dairying is fast becoming the leading industry owing to ideal crop and weather conditions and the large tracts of cheap lands available for pasture.

James R. Lowney.
Winnebago Co., Wisconsin.

Guernsey Breeders Meet.

The Rusk County Cattle Breeders' Association held a meeting recently at the village hall in Bruce. Judge D. W. Maloney, of Ladysmith, acted as secretary, and addresses were delivered by County Agent Ingles, of Eau Claire county; County Agent Householder, of Rusk county; W. W. Kinyon, of a large Guernsey herd at Eau Claire, and Mr. Spiers, of Eau Claire, who spoke from the cream buyers' standpoint.

The meeting was followed by a banquet in the evening at Hotel Briggs. W. A. Backburn, of Bruce, acted as toastmaster. The association reelected John Hein, Jr., president, and L. E. McGill, secretary. A number of new names were added to the roll.

Corn Show in La Crosse County.

The annual Farmers' Course and Homemakers' Conference, held at the La Crosse County School of Agriculture and Domestic Economy, January 25th, 26th and 27th, was well attended despite cold weather and roads that were nearly impassable, due to deep snow.

As usual, the La Crosse County Order of the Experiment Association staged a big show of corn, grain and other farm products, this show was made up of over 200 entries. The corn show was particularly good. There were eleven fifty-ear samples, twenty-seven ten-ear samples and thirty single entries. The threshed grains and sheaves were very good.

The exhibit of the work done by the pupils of the rural schools in sewing showed that a great effort is being made in La Crosse county to reach perfection in this line of work. Both teachers of the rural schools and Elizabeth D. Raht, head of the home economics department of the county school should be congratulated for the fine showing made.

Saturday Prof. J. G. Fuller judged the horses shown and the silver cup for best draft mare was won by Jewett Willey, Holmen, on a typey pure-bred Percheron.

Those assisting in the course from the university were Professors G. C. Humphrey, C. J. Galpin, A. L. Stone, W. W. Weir, R. V. Gunn, Miss Elizabeth Kelley and T. L. Bewick.

Otto Wolf, La Crosse, R. 2, won the silver cup offered by The Wisconsin Farmer for the best fifty ears dent corn.

Methods of planting corn by which one or two rows of an early maturing variety alternate with one or two rows of a later maturing variety have given higher yields than either variety planted alone, according to the annual report of the Bureau of Plant Industry. Where there is likely to be a shortage of moisture during certain periods of the growing season, dependence should not be placed in a single variety; under such conditions two or three varieties which differ considerably in length of growing season should be grown.

Resolutions by Wisconsin Veterinarians.

Veterinarians forming the Wisconsin Veterinary Medical Association held their annual three-day session at Madison recently. The meeting was well attended, due in a large measure to the excellent program prepared. Over 130 members, representing almost every county in the state, came and took an active interest in the vital discussions carried on. Tuberculosis and sterility were the chief subjects under discussion. In a paper ably presented by Dr. W. L. Boyd, of the University of Minnesota, the pathology of sterility in contagious abortion was discussed. Other angles of the same disease were brought out in the addresses of F. J. Cole, of the department of experimental breeding at the University of Wisconsin, and by Dr. K. S. Hecrot, Plattville.

Tuberculosis and experiences with the tuberculin test were treated by Doctors Clark and Wright. In the discussion that followed the association adopted the following resolutions, in which are embodied the suggestions of the convention on the part the state shall play in the fight on this disease:

Whereas, It has been shown that tuberculosis exists among cattle to an alarming degree in some sections and that the herds that have been tested from year to year are suffering on account of trade as a result of any reactors being sold from untested herds, and, believing that for the protection of the public, pasteurized milk as an aid in at least partly protecting the public and cattle industry, and, also believing that the destruction of all the reactors at once is in some instances, economic waste and that the usefulness of these animals might be conserved until such time as the owner might find himself in a position to eliminate his tubercular herd and substitute a healthy one;

Therefore, Be it Resolved: 1st That laws be so amended as to permit the use of milk drawn from reacting cows provided that such cows are from time to time examined under the direction of the department of agriculture, and provided that no animal showing any physical symptoms shall be allowed to remain in any herd giving milk for human food. Provided further that the milk from all herds containing reactors shall be disposed of only to some pasteurization plant where a system of pasteurization approved by the dairy and food commission and department of agriculture, has been installed.

Second. That the department of agriculture may compel the pasteurization of all milk delivered at creameries and cheese factories in certain sections of the state whenever deemed necessary by such dpartment.

Third: That the by-products from all creameries and cheese factories must be sterilized before returning to any feeding station or farm

Fourth: That sufficient funds be provided for the department of agriculture to examine all herds in the state, using tuberculin in conjunction with such examination.

Whereas, It is our belief that the present system of compensation for diseased animals works an injustice to the breeder of better stock;

Be it Therefore Resolv'd, That a wider latitude of compensation should be provided, based on the actual market value of the animal, the legislature to determine what part of that value shall be paid by the state.

A clinic, conducted in the infirmary of Doctors West and Wolcott and in charge of Dr. T. H. Ferguson, of Lake Geneva, showed some interesting cases of poll evil, side bone, and other diseased conditions.

The association elected the following officers for the coming year: Herbert Lothe, president; J. D. Lee, Menomonie, vice president; and J. F. Roub, treasurer. Dr. W. A. Wolcott, of Madison, was reelected secretary. The meeting for 1918 is to be held in conjunction with the Minnesota Veterinary Association, in Lake City, Minn., in the third week in July.

Rock County Judging Contest.

To the Editor:—Three Dane county farms were scenes of more than usual interest on January 19th, being visited by a group of twelve boys with their instructors and three agricultural experts acting as judges. These boys were taking part in the Rock County District Stock Judging Contest and were representatives of the Milton, Milton Junction, Janesville and Edgerton high schools.

They had three classes of stock to judge, namely, draft horses, dairy cows and swine, four in each class, with two classes of dairy cows, one Jersey and one Holstein class.

The horses were judged according to their ability to draw heavy loads, the cows according to ability to produce milk and the swine according to ability to produce pork.

The draft horses, two Clydes and two Percherons, and the swine, four Poland Chinas, were found on the farm of Mr. Hepburn, and the Jerseys on the Lawton farm, managed by Loyd Simpson, while the Holsteins belonged to Mr. McGinnity.

The judges of the boys' work were Mr. Charles Emery, of the Emery Stock Farm, of Albion; Mr. Truman Crandall, of Milton, for a number of years in charge of the live stock work in the Illinois State University School of Agriculture, and Mr. Teige, of Stoughton, instructor of agriculture in the Stoughton high school.

The school whose team secured the highest number of points was Milton Junction. This entitles it to represent this Rock county district at the state contest to be held in Madison some time in February. Here it will come in competition with other teams from other districts in the state.

The individual scoring highest in this contest was Paul Wixom, of Milton Junction, but Edmund Overton, of Janesville, was a close second, the difference being only 2.8 points, Wixom having 310.8 and Overton 308.

This series of contests, of which the above is a part, was inaugurated by the agricultural section of the State Teachers' Association in November, 1914.

Last year the Milton high school won in the Rock county district and again in the state contest where eighteen districts were represented.

It is expected that this year, being the second one of these contests, more schools will be represented throughout the state.

The Wisconsin Bankers' Association is co-operating with the teachers in many instances by furnishing the necessary funds to pay the expenses of these contests. In the Rock county district the expense was borne by the Fourth District Bankers' Association.

Rock Co., Wis. Allen B. West.

JOHN DEERE IMPLEMENTS

BETTER FARM IMPLEMENTS AND HOW TO USE THEM

BOOK FREE 156 page reference book—tells all about a complete line of farm implements and how to adjust and use many of them. A practical encyclopedia of farm implements. Worth dollars.

Describes and illustrates Plows for Tractors; Walking and Riding Plows; Disc Plows; Cultivators; Spring Tooth and Spike Tooth Harrows; Disc Harrows; Alfalfa and Beet Tools; Farm and Mountain Wagons; Manure Spreaders; Inside Cup and Portable Grain Elevators; Corn Shellers; Hay Loaders; Stackers; Rakes; Mowers and Side Delivery Rakes; Hay Presses; Kaffir Headers; Grain Drills; Seeders; Grain and Corn Binders.

This book will be sent free to everyone stating what implements he is interested in and asking for Package No. X-64.

JOHN DEERE, MOLINE, ILL.

New Deere Light Draft Gang Plow

For twenty years the New Deere Gang has had the good opinion of enough farmers to make it the one best seller—

And, today, it is the same plow it was twenty years ago; with the usual minor refinements added.

Correct in design, always representing the highest development of the plow-maker's art, the New Deere Gang is a leader, and has been every single year for twenty years.

Go to your John Deere dealer's and look this plow over—you will readily see why it is such a popular plow.

The New Deere Gang is the most widely used plow of its type.

It is light draft, durable and is equipped with John Deere bottoms, known all over the world for superior work, easy scouring and light pulling qualities. It cuts and turns full width of furrow.

A simple, practical foot lift and auxiliary hand lift lever—easy to raise bottoms out of the ground.

John Deere Quick Detachable Shares—great labor and time savers. Share can be taken off easily, only one nut to remove.

John Deere Spreader

The Spreader with the Beater on the Axle

Mounting the beater on the axle simplified the construction, eliminated troublesome parts and made possible a successful low-down spreader with big drive wheels. There are no shafts to get out of line, no chains to cause trouble, and no clutches to adjust. The only spreader with beater and beater drive mounted on axle.

Low down, with big drive wheels out of the way. Easy to load.

Revolving rake, driven by manure moving toward the beater—no bunching of manure. Ball bearing eccentric apron-drive—a new and exclusive driving device.

Makes uniform spreading certain.

Wide spread attachment for spreading seven feet wide can be furnished for the John Deere Spreader. No chains nor gears. Quickly removed.

John Deere Model "B" Disc Harrow

Using a disc harrow before plowing pulverizes surface lumps, works trash into the seed bed and prevents the escape of moisture. Then when the furrow slice is turned, the trash decays rapidly and no large air spaces are left between bottom of furrow and the turned furrow slice. Water in the subsoil can make its way into the seed bed and plant roots can penetrate to deeper soils.

Discing after plowing removes the weeds, and makes the seed bed compact, but not hard. The discs break up lumps of soil.

The Model "B" pulverizes at even depth its entire width.

Patented spring pressure third lever—inner ends of gangs can be given light or heavy pressure to disc over ridges or cut out dead furrows without burying the harrow.

Independent gangs. All tendency of gangs to crowd to one side is easily overcome by giving them the proper relative angle.

Flexible—only that part of the Model "B" harrow passing over an obstruction is lifted out of the ground.

Rear section can be furnished to make a double action harrow.

John Deere Corn Planters

Accuracy in a corn planter means uniform drop—number of kernels the same in each and every hill.

If the planter misses only six kernels in every 100 hills, the loss in yield is nearly two bushels per acre.

Accuracy in planting has been the main object in designing John Deere planters. One of the many advantages of using a John Deere planter is that with proper handling it will plant practically 2, 3 or 4 kernels in every hill, as desired.

John Deere No. 999 is accurate. It has the John Deere *Natural Cell Fill, Edge Delivery Seed Plate.* Surface of hopper bottom and openings to seed cells are oblique, or sloping. Kernels move toward and enter the cells in their natural position. They do not have to be tipped on edge.

Merely move foot lever to change number of kernels per hill.

Drilling distances varied, and change hilling to drilling or back to hilling made easily.

JOHN DEERE, MOLINE, ILLINOIS

Law Questions.

Note Obtained By Fraud.

A Subscriber, Thiensville, Wis.—I signed a note for the Industrial Co-operative Union, and the agent said I could have said note cancelled if I wished to do so. He told me that a meeting of the Union would be held in our town every month. No meetings have been held, and said agent is now out of the agency. Where and how can I get said note cancelled?

Answer.—If the note was obtained by fraud you can bring a suit in court to have it cancelled; or, you can refuse to pay it when due, and defeat its collection by proof of such fraud.

Owner Liable For Taxes.

A Subscriber, Walsh, Wis.—A rented his farm in Wisconsin and the live stock thereon to B for cash rent. Nothing was said in the renting contract about taxes. Who is liable for the taxes on said live stock?

Answer.—The owner of property is always liable for the taxes on the same; therefore, in this case A is liable for the taxes on the stock he rented to B.

License to Sell Beef.

A Subscriber, Washburn, Wis.—I am a farmer and live about six miles from the city of Washburn, Wis. Have I a right to butcher cattle that I raise and sell the beef by the quarter or in smaller pieces in the city, without a license?

Answer.—The city may have an ordinance requiring you to obtain a license. You should inquire of the town authorities about it. The state laws do not require a license in such cases, but the city may.

Cleaner Dairies—Healthier Cows

Clean milk commands top prices. But, to produce "Class A" milk, you must have sani ary stables and milk houses.

Natco Hollow Tile walls are the last word in sanitation. Do not hold odors or moisture

Easy to clean and keep clean—no place f r germs to hide. Dead-air spaces keep the stables cool in summer and warm in winter. Natco Barns require practically no repairs—never need painting—are fireproof, age and weather-proof. Build once for all—

Build with Natco Hollow Tile

Unequaled for all farm buildings. We have practical plans of many types. Tell us what you plan to build; we will help you—free.

Natco Imperishable Silo is the perfect silage preserver. Proof against moisture, acids and decay. Strongly reinforced with steel bands laid in mortar. Any mason an erect a Natco. It will enhance the value of your farm.

Write us for our illustrated book, "Natco on the Farm," also ask for Silo Catalog—both free.

Win An Easter Surprise Package

Solve This Puzzle

Here are seven ponies in a pen. By drawing three straight lines you can put each one in a pen by himself. If you can do this we will send you as a prize, an Easter surprise package, containing 36 beautiful Easter novelties, seals, cards and stamps. This is one of the most artistic Easter packets put out. All you have to do is enclose four cents stamps in your letter to pay postage and cost of mailing. We will also send a certificate for 1500 Free Votes in our grand contest for a beautiful Shetland pony.

Fine Pony Given Away

Remember the Pony will absolutely be given away in the grand contest which we will tell you all about. Send your answer at once so you can be entered in the great contest. In case of a tie a pony will be sent to each person so tied. Full particulars by return mail in same letter with Easter packet.

THE PONY MAN Dept. 768 Des Moines, Iowa

Business Side of Dairy Farming.

To the Editor:—There are a great number of dairies in Wisconsin which are, when considered on a business basis, putting their owners in debt every year. I cannot understand why dairymen will persist in working with unprofitable cows when it is entirely practical for them to have dairies that will make them $30 or $40 per cow annually after paying for all their feed at market price and $12 to $15 for the labor of caring for them.

I do not advise all dairymen to secure registered herds of any breed. This is all right when one can see his way clear to do so. What every dairyman can do to improve his herd is to test his individual cows and dispose of those that do not come up to a profitable standard. This standard will vary in different localities, depending upon the cost of the feed, labor and value of the products.

I shall not undertake to tell you what breed to select for dairy purposes, but I would advise selecting some one of the dairy breeds, study the subject thoroughly, and then select the breed that you think is best suited to your wants.

In case you have no cows and are intending to buy, get the privilege of testing them before buying. See them milked; weigh the milk. Take a sample and test it, or have it tested, and you can figure out what she is doing in the line of producing butter fat, to which you add 15 per cent to learn how much butter she will produce. This work will require a little time, but it will pay in the end. If you have a dairy farm, test every cow to know what she is doing. Do not go guessing along with this work.

Raise all the heifer calves from the cows that test well enough to be retained in the herd and have them bred to the right bull. These heifers will be more profitable for you their first season when only two years old than will the average cows that you will be able to buy.

Successful dairy farmers should know the good and bad qualities of their individual cows just as well as they know those of the men they employ. It is of just as much importance and is much easier to control, as they do as they please with their cows, but there are times when they cannot as they would like to do with some of the men in their employ. They do not keep a man permanently when they know where they can secure a better one, and yet they go sliding along with a large percentage of their herd unprofitable. Why do they do this? Why can't they appreciate their business and apply business sense to their work? Why not get up to the business standards of their merchants and manufacturers? They are studying all the time how to lessen the cost of doing business and they are succeeding. There is as much room to apply intelligent thought to dairying as to any business in this country.

But you must commence at home to study the cause of such a condition. Do not go to the farther end of the line and kick everyone but yourself because you are not making a profit in your business of dairying, but commence with yourself. The probabilities are that you are the weakest link in the chain. There are in some communities dairy herds that produce per cow from 300 to 400 pounds of butter annually. These herds should be object lessons, as what one dairyman has done another can do. You should not take figures of another when estimating the cost of feeding cows, but should learn from your own work what it costs. This is not a difficult matter; the most difficult part is to bring yourself to realize that it will pay you to do it.

Many dairy farmers have so much to look after that they do not, or think they do not, have time to look after the testing of their cows. In such cases get the boys, the girls or the wife to look after it and I will guarantee that after it is followed a year you will become interested in it, as you will see it pays better than any other work on the farm. The whole family will become interested in it, and it will help them to see the business side of farm work. This work will cause you to think better of your business and will cause the boys to think better of the farm, and some of them will begin to see that there are greater opportunities on the farm than in any other profession.

James R. Lowney.
Winnebago Co., Wis.

The Mystery of Feeding Dairy Cows.

To the Editor:—In a late issue was an article by E. L. Vincent under the above heading, and I was surprised to learn that the farmers in Mr. Vincent's locality were so backward at this late date in making use of the information given in our up-to-date farm papers and the work of our farm institutes as regards the feeding of dairy cows so that there was "not one farmer in a hundred that had an adequate knowledge of how a cow ought to be fed." There may be something in the mystery of it that they don't understand, and it would be well if Mr. Vincent would explain it for the benefit of those who do not know. I don't see how it would benefit the farmers any more to have a personal visitor come and tell them how they should feed their cows than it would to read it in the farm papers or hear it at an institute.

But I have a better opinion of the

2 Lbs. Air

One Pound of Feed and Water

The PROPERLY Balanced Ration

EACH animal in your barn requires the oxygen from two pounds of air to consume one pound of food and water.

Proper ventilation is the only answer to this. And *proper* ventilation is your big problem. Let us answer it for you with a

KING

System of Ventilation

Planned for the Building It Goes Into

Don't think that a King System is high priced because it is planned part by part to fit your building. It actually costs less to let us do the planning and supply the material than for you to try to get results in any other way. We have eliminated guess work—we have no costly experiments to make. King results are *guaranteed*.

Get This Book and let us tell you how quickly a King System pays for itself and keeps on earning dividends on your investment year after year. The King Aerators on the roof are the first units of the King System. They can be used with or without the complete system. *Write* for our new book on barn ventilation.

King Ventilating Co.
1144 Cedar St.
Owatonna, Minn.

intelligence of the farmers in general than Mr. Vincent has in regard to their ability in feeding their cows. I think the majority of them are feeding to good advantage such as they have and perhaps many think, like myself, that there is more profit in feeding what they can produce on their own farms than investing in high-priced feeds. We all know that alfalfa or clover hay are better milk producers than marsh or timothy, but all cannot grow alfalfa successfully as the land may be too level, with a hard, tenacious subsoil. We had to feed timothy hay the fore part of the winter for the reason that we failed to seed two years ago (an uncommon thing for us to do) and the old clover killed out. But we have now got down to two-year-old alsike clover and are feeding that. Our day's ration for the cows is as follows. We give each cow about twelve pounds of ensilage three times a day, with four quarts of ground corn and oats on top of each feed. Between meals they get shredded corn fodder and at night all the hay they will eat up. This may not be considered by some a good ration, but it gives us good satisfaction.

In conclusion I would say that, according to the financial returns and the amount of milk received as reported from different creameries through the state, the farmers generally must know how to feed nearly right in order to get such good returns. Wm. McCarthy.

Dairying and Business Methods.

To the Editor:—Every phase of dairying is interwoven with business and principles of business. Successful dairying depends in its final analysis upon the use of the very best business judgment. The very foundation of the work demands business methods. Even in the selection of a breed of cows a man must decide which is to be chosen for the particular market to which he is to cater. In a western community where a city of 10,000 sprang up almost overnight men tried to supply milk to the city by using cows from the beef herds of the range country. The heavy, fleshy cows really produced some milk under liberal feeding. Yet it was not long until the very business aspect of the work forced the milkmen to dispose of the beef cows which they had used and to secure cows of the dairy breeds. They could no more produce milk successfully from beef cows than the engine on the transcontinental line through the city could have moved its long train over a dirt road instead of using heavy steel track. It was business with the railroad to have the best roadbed and track obtainable. It was business that compelled the milkmen to change dairy cows.

In the purchase and use of dairy equipment there is opportunity and demand for the use of a large amount of business sense. The milk room with its separator and washing sink and possibly a sterilizer and with power of some sort, there is a problem in arrangement equal possibly to the problem of planning the power house for the electric light plant in the small town. Dairy farms have taken the lead in the installation of electric lights for the barn and home. There is a double reason for this. The dairy farmer is progressive and early sees the advantage of modern improvements. The business efficiency of the farm calls for a satisfactory lighting system which active dairymen are determined to have.

Progress in improved breeding has advanced rapidly as a result of the careful businesslike methods followed. Each cow has been put on an individual record and it is known to the pound how much butter fat is produced annually. In this way the boarder has been eliminated and the profitable cows have been retained for milking and for replenishing the herd. There is no other line of farm work in which there is such scientific, businesslike methods of improvement. In Wisconsin the average production of cows in the oldest testing association has increased 100 pounds per year. In Denmark they tell us that the average production doubled in ten years. These are the results of efficient business methods. The Babcock tester is to the dairy what the high-salaried efficiency expert is to the large commercial institution.

In dealing with city patrons the dairyman who delivers his milk has a large problem. He must please his patrons and he must be careful of financial difficulties. So seldom dairymen have been found wanting in their ability to take care of undependable customers that it rarely happens that there are any difficulties. People have learned to respect the business ability of their dairyman and treat him accordingly.

Now with foresighted business ideals dairymen have organized a national association and are busily educating people to use more dairy products. It is said that they hope to double the consumption of milk and those products derived from it. The campaign is well and carefully planned and is already bearing fruit. Business methods are common assets of dairying and the business ability as shown by individual dairymen and by the dairy associations is to be heartily commended.

Dairymen are alive to opportunities to improve their knowledge of their business and their conditions. There is no other class of men who attend conventions and institutes in so large a proportion as do dairymen. There is no other class of men that asks and receives so much co-operation from the state agricultural college and the federal department of agriculture. In support of this latter statement we may relate the conditions that prevail in one state. It happens that there are five men employed by the state agricultural college or who represent the department at Washington and who work in co-operation with the college, yet the value of the dairy cows of the state is but little more than one-third the value of the horses and only one man is devoting his time to horse improvement. The dairymen have secured this greater service because they have shown a desire for it. Dairymen are usually found taking the lead in every community enterprise. Their business ability qualifies them for positions of trust and responsibility. At present there is a difference of opinion between dairymen and consumer relative to the actual market value of milk. It is a safe prediction to make that the business ability of dairymen will be able to make a settlement satisfactory to both sides.

H. E. McCartney.

Pasteurized Butter Wins.

Of the nineteen buttermakers whose samples in the January scoring exhibition at the dairy school scored 93 or over, at least twelve pasteurized their raw cream previous to churning.

This shows one distinct point of advantage gained by buttermakers who pasteurize cream, especially in localities where the raw material is received from farms only once or twice a week. Pasteurization is becoming more widely used in Wisconsin creameries for a number of reasons, the most important being the following:

The process makes for more uniform quality of butter, because of a better control of flavor.

Pasteurization helps in the keeping quality of butter. It makes the pure culture starters more effective than when raw, unpasteurized cream is used.

From a sanitary standpoint, alone, pasteurization is of incalculable value, as it safeguards the product.

Buttermakers receiving scores of 93 or above on their samples were R. C. Cleaves, Iola; Ernest Soltwedel, Lime Ridge; F. J. Peschke, Fairwater; Henry A. Paul, South Superior; Homer F. Tait, Turtle Lake; Arthur Olson, Oshkosh; M. Hansen, Iron River; B. J. Peterson, Prentice; H. F. Zabel, Wausau; C. J. Bach, Luck; W. A. Moyes, Ironton; F. M. Werner, Waterloo; Newburg Corners Creamery Company, Bangor; Alfred Thorson, Falum; E. O. Feiler, Osseo; John Boehrig, Calvary; A. L. Larson, Nashotah; F. A. Danielson, Grantsburg; O. Christensen, Nelsonville.

Buttermakers from the creameries of Wisconsin helped judge the January exhibits, a practice which will hereafter be the custom. Managers of Wisconsin factories are invited to co-operate with the officials of the dairy school by sending their operators to co-operate in the scoring, thus adding greatly to the event's practical value.

The buttermakers who took part in the scoring this month were C. J. Dodge, Eclipse Creamery, Windsor; Fred Werner, Waterloo; A. C. Marks, Marcus Creamery Company, Muscoda. T. A. Sommerville, representing Hunter, Walton & Company, Chicago, also assitsed in the commercial scoring. A total of eighty-four tubs and packages were scored.

It is practically useless to sow alfalfa on thin soils where the bedrock approaches the surface; on land which is underlain at comparatively shallow depths by hardpan; or in locations where the subsoil is so compact that the roots cannot penetrate it.

DELCO-LIGHT

All In The Day's Work

Delco-Light actually pays for itself in time and labor saved in doing the household chores.

Here is a sample day's work for Delco-Light, on the farm of A. L. Denlinger, near Engelwood, Ohio.

—"ground 150 lbs. of sausage meat—churned 90 lbs. of cream—turned the washing machine and wringer for large family wash—separated 25 gallons of milk. And after all of this work, my wife had plenty of time to bake bread. During the evening, some of the neighbors drove in and we had a pleasant time under Delco-Light."

Delco-Light betters living conditions on the farm. It furnishes an abundance of clean, economical, safe light for house and outbuildings. It makes possible a modern bath and running water in various parts of the house, and it furnishes power for small farm machines.

Delco-Light is a complete electric power plant—wonderfully compact, economical and efficient—and so simple that a child can care for it.

Price complete with batteries is $275 F.O.B. Dayton

Windbreaks Serve Real Purpose.

Cutting Winter Breezes Intercepted at Small Cost and Conditions Made More Congenial For Man as Well as Animals.

NATURE is generally ruthless in her dealings with man and his affairs, and her mandates are often obeyed with passive submission. Her forces are a constant challenge and the individual who wins out in the end must brook opposition to many of her laws. If she does not temper the north wind to the shorn lamb man sometimes steps in and accomplishes this for himself. No more shining example could be given of success in this being attained than is furnished by thousands of instances in the corn belt where the comfort in living conditions on the farm has been enhanced immeasurably by the placing of what might be called "farm windbreaks." Fortunately, the means are easily at hand to accomplish this end because of the supply of hardy, long-lived evergreens. Certainly the cutting edge may be taken off the winter winds in every case where a farm owner is willing to make a small investment of time and capital in the placing of a windbreak. Such a windbreak is needed first and foremost because it adds greatly to the comfort of living for the farm family. This is the first consideration. True it is that in most cases when windbreaks are mentioned reference is made to the effectiveness of the protection which they afford live stock. This is important, but we claim that it is secondary, even though hundreds of dollars are saved annually in feed bills.

It has been demonstrated over and over again that throughout most of the corn belt cattle will make just as large gains in open sheds as can possibly be made in stables, and for the housing of pure-bred animals open sheds are coming into popular favor. Plenty of fresh air contributes to the healthfulness of the herd and this is a factor that is closely associated with human health. Wherever we find a matured windbreak we discover that this matter is carried one step further and that farm animals are being kept in the open most of the winter, which contributes still further to the complete stamping out of diseases that are characteristic of every class of animals. Malignant germs constantly inhabit dark corners, but none can exist in the presence of sunlight. That is why this paper advocates in the strongest possible terms that it can command the placing of more windbreaks so the farm animals can be kept in the open and maintained and carried through the winter at the smallest possible outlay for feed.

In these days no man can afford to use high-priced grain and in turn allow his animals to shift for themselves in the open fields or in exposed yards during periods of severe weather. A week of unfavorable weather may undo all that has been accomplished in a month of liberal feeding, and men who have had extensive experience in handling live stock know right well that enough damage is sometimes done to an exposed herd in a single twenty-four-hour period to offset several weeks of feeding. Heavy losses always occur when winds suddenly change and temperatures drop quickly during the winter where there is bleak exposure to the cruel winter winds. With a windbreak rightly placed the storms can never, as the thief in the night, creep upon the herd unawares, because the right kind of a windbreak will master and temper any kind of a storm.

We have sometimes been asked to place an estimate upon the value of a

good farm windbreak, but we have hesitated even to guess at what it might be. It is safe to say, however, that in the feeding out of a single carload of steers and a carload of hogs enough saving would be effected in the amount of grain used to pay the original cost of putting out a windbreak. True it is that some winters are more severe than others, but taking the average as they come it could be demonstrated without any "ifs" or "ands" that a good white pine or Norway spruce windbreak would effect this saving.

There is still another consideration that should receive the attention of every farm owner, namely, the effect of a windbreak upon the value of the land itself. We have stated that a windbreak adds greatly to the comfort of living and we have called attention to the saving that it effects in feed bills for live stock. If, in addition, it could be proven that it adds to the value of the land itself, then there should be no further grounds for argument in opposition to it. As a matter of fact, this paper could give scores of instances where individual farms have sold at much higher prices because of the presence of windbreaks than could possibly have been obtained if the buildings on this same farm were fully exposed. To say that it amounts to $1,000 on a quarter section is putting it low and men who have had experience in live stock farming where this kind of protection has been afforded would have no difficulty in proving that even $2,000 would not be an unreasonable addition to the value of a protected farm. Look around and find the farms where foresight was exercised in days gone by and a windbreak planted and you find in almost every instance such farms to be literally beyond price. Those who are farseeing enough to plant a windbreak are not merely doing something that will affect themselves favorably but they are contributing their mite to making farm conditions of their neighborhood more agreeable. Were it not for the groves, the orchards and the protecting windbreaks that we now have we would encounter the terrific gales that spread over the prairie in our boyhood days, and let it be remembered that every tree planted contributes something to warding off the storms that are so much dreaded because of the discomfort they bring and the stock losses that they usually entail.

New Potato Disease.

A potato disease appearing on certain soils and apparently associated with the lack of potash in the commercial fertilizers used was prevalent last summer in various sections of the East. According to specialists of the bureau of plant industry, United States Department of Agriculture, the trouble was largely controlled by the use of stable manure. The disease may be expected to appear again with increased severity during the coming season in many potato-growing sections, from Maine to Virginia, and probably also farther south. It was first noted in scattered fields in 1915. In 1916 it became serious and general over considerable areas. Last year the disease was first observed late in June in Maryland and Virginia, and during the latter part of July in Maine. The affected plants first develop a downward rolling of the leaf margins, accompanied by a peculiar bronzing of the surface, sometimes mistaken for spray injury. Since it occurs on unsprayed as well as on sprayed plants, it cannot be due to the corrosive action of sprays. The foliage gradually turns brown—not yellow—and the plants ripen prematurely. Death of the leaves and sudden collapse of the stems at the ground level follow. The yield, of course, is much reduced.

The disease is found more commonly on fields of early maturing varieties, but is not restricted to them. It also appears first on early planted fields.

What is more striking is the very apparent association of the trouble with certain soil types, at least in Maine, where this relation, as well as other features of the trouble, are being investigated by the department experts in co-operation with the Maine Agricultural Experiment Station.

Soils which originally supported the growth of soft woods, or "mixed-growth lands," developed the diseased condition in its most severe type, while the hardwood ridges showed it least or not at all. The trouble appeared first in the swales or lowlands, where the natural drainage was not so good as on the higher ridge land. When the disease appeared at all on the higher ground, it was of a less severe type.

Annual Meeting Cranberry Growers.

To the Editor:—The thirtieth annual meeting of the Wisconsin State Cranberry Growers' Association was held at Foresters' Hall, Grand Rapids, January 16th. The hall was loaned by the Wood County National Bank. President Searls called the meeting to order and there was a good attendance. He briefly reviewed the methods of culture and gave some very good advice based on forty years' experience. Dr. E. O. Ball, state entomology, was present and took an active part in helping to solve the problems of the future of the experiment station, which will no doubt be left at its present location and continued along its present lines. Mr. O. G. Malde's report on the year's work at the station and general state condition the past season was very complete and valuable, containing many points of great interest. Mrs. S. N. Whittlesey spoke on the lack of a suitable display of cranberries at the Horticultural meeting and caused so much interest among the growers that a splendid exhibit is assured for next year. Mr. C. M. Seeker told the growers that his short experience in helping in the selling end of the business at the Chicago office of the exchange had impressed him with the fact that there should be no effort to cut expenses in sorting and grading the fruit, that he wished every grower could have had his experience, as they would then see the necessity for the utmost care in packing.

Reports from the pumping committees were very encouraging. The sand-pumping experiment at Valley Junction demonstrated that sand could not be spread on vines by this means.

The experiment at Mather for determining whether water could be pumped from the sand below showed that this was entirely practical with a battery of points surrounded with gravel. Dr. Ball was made an honorary member of the association.

After the meeting the officers and directors of the Wood County National Bank, of Grand Rapids, tendered the members a splendid banquet at the Witter Hotel and a theater party afterwards.

The total crop for 1916 in Wisconsin was 37,000 barrels and a full crop is now estimated to be from 60,000 to 75,000 barrels.

J. W. Fitch, Secretary.

Don't Set Trees Too Deep.

The beginner in tree planting usually sets his trees too deep rather than too shallow in the relatively heavy soils of Missouri, J. C. Whitten, of the department of horticulture of the University of Missouri, says:

"Young trees should be selected for planting and they should be set at the same depth at which they stood in the nursery," Mr. Whitten said. "Trees turn to the northeast and grow crooked because of the warm south and southwest winds during the growing season. The tree should be set with the heavier side to the southwest to avoid this.

"The roots should be trimmed, so as not to be cramped, and any ragged wounds taken off. Peach trees should be pruned most severely after planting of any of the orchard fruits. Trim all branches off, leaving a single whip, then shorten the whip to a height of about two and one-half feet. Cherry trees should be less severely trimmed. If well branched the center of the tree should be cut out. The Japanese plum tree should be shaped like the peach. Other plum, apple and pear trees, having only a single whip, should be treated likewise. Older trees may be treated like the cherry with the exception that all branches may be shortened to one-half or one-third of their natural length."

Heider

Made and Sold by

Rock Island Plow Co.

Nine Years of Actual Field Work

THE HEIDER 4-cylinder, 4 wheel tractor is the most profitable power plant you can have on your farm. A real one-man, all-purpose tractor. Proven by nine years of service in the hands of owners—on every kind of tillage, hauling and power work. Model C pulls three 14-inch plows under ordinary conditions; Model D pulls one less bottom. Does your plowing, discing, harvesting, threshing and hauling—takes the place of a gas engine on all stationary work. Throttles down to the most economical power on any belt machine—even a cream separator. The

Heider Tractor

Burns Kerosene or Gasoline

With its specially designed manifold the Heider burns either kerosene or gasoline.

Equipped with the famous Heider Friction Drive which means more power with less expense. The powerful, heavy-duty, four-cylinder Waukesha motor assures you the best power plant that can be put in a tractor—it is the lowest priced tractor made, when price is measured by service.

William Korreet, Bird Island, Minn., says: "The Heider I bought in March, 1911, has been in hard use winter and summer ever since on every kind of farm work. It is in good order and working today."

Let the multitude of Heider owners tell you about these tractors. New Catalog—with letters from users—will be sent to your address. Postal will bring it. Write today.

TO RENT GOOD 200-A. farm in Southeastern Minn. Easy terms, cash or shares. D. B. Davis, Dodge Center, Minn.

Motion Pictures For the Country Folks.

The bureau of visual instruction, care of the University of Wisconsin, Madison, Wisconsin, is extending the motion picture service to include smaller towns, and in this way the rural districts will get some benefits. Prof. C. D. Lamberton, of Berlin, Wis., had written stating that the country people take greater interest in the films which are sent on the university circuit that the town people. This suggests that eventually this service might be extended to include the country schools, at least those where there is room for the exhibition of such pictures. The films which the university department is sending out include many interesting travel views, historical sketches and glimpses of life in the various industries. No attempt is made to show comedy. There are some films illustrating fiction which is regarded by the educators as classic. Perhaps the most interesting and instructive views are those of travels in our own country and foreign lands.

In Kewaunee County.

Edward Hoefs, official tester of the Kewaunee County Association, reports twelve cows as having produced forty pounds of butter fat or more in January. A grade Holstein, owned by Matt Cherveny, produced 71.2 pounds of fat in thirty days and headed the association list. Ben Weisse had three grade Holsteins which produced better than forty-five pounds in thirty days.

Experience With Belgian Hares.

To the Editor:—I noticed where some subscriber wants to know something about Belgian hares. I have raised Belgian hares for two years and I know something about them.

The male will kill the young ones if they are allowed to run together when they are too young. Of course, when they are about two or three months old they can be left with the male. When my female had young ones she shut the hole partly with ground, leaving only enough space to admit some air, and the male never found out where her young ones were. I have seen cases where the male did not kill the young even when he had a chance, but this happens very seldom. It is much better to let them run loose, as they can eat fresh grass or anything they want and they can also have more exercise, which is something they like. In the winter it is a good thing to have them penned up in a warm place.

If rabbits drink too much water it sometimes causes a kind of sickness, which we boys call "water bellies" and it kills them. They may be fed cabbage, carrots, clover, oats and bread. In winter they like to gnaw on tree branches, nibbling the bark off. Peter Hartmann.

Hold Onto the Lines.

To the Editor:—I always consider the right way to unhitch a team is to hold the lines until the tugs are all unhitched. Keeping the lines in the hand, press the singletree forward, and when the tugs are unhitched, walk around the horse next to you. When I get within reach of the bridle rein I catch it until I get in front of the team; then drop the neckyoke. I believe anyone will find this a safe way, as a great many wagon tongues have a piece of iron on them to keep the neckyoke from slipping off.

In putting up the lines last one can turn the horses' faces to them if they start, whereas if the tongue was up it would serve as a brace and keep one at the horses' heels. You can hold a horse by his head easier than by his tail.

I do not consider myself a first-class horseman. As the only kind of horses I have handled were broncos, or of that blood, I have found that kindness and a steady nerve get better results than anything else. H. B. H.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Producing Eggs in the Winter.

Poultry owners who wish to obtain a satisfactory production of eggs during the fall and early winter should arrange to hatch pullets in March or April. Birds hatched at this time will be well matured in the fall. Furthermore, a greater proportion of them will go broody early in the spring, thus completing the circle necessary for production in the fall.

Pullets hatched in the spring can be induced to lay more abundantly in the winter if they are properly fed, housed and handled. On the average general farm very few eggs are secured at the time when eggs bring the highest prices. It will pay the poultry owner, therefore, to devote a little trouble to providing his birds with the most favorable surroundings for the winter.

The house should be thoroughly cleaned, disinfected and made tight before the cold weather sets in. If the house has a dirt floor it is well to remove three or four inches of dirt from the top and to replace this material with dry gravel or sand. On cement or wooden floors four or five inches of fresh straw or litter may be thrown down after the floor has been cleaned

Ventilation is another important factor to consider. The house should be tight on three sides, but the fourth muslin curtains may be used for from one-third to one-half its extent. In any case, there should be some ventilation in the house, even on the coldest nights. Fowls will stand considerable cold air, provided it is dry, and ventilation will keep the air thoroughly dry in the house. On the other hand, drafts are likely to cause roup and other trouble.

Many farmers, in feeding their birds, overlook the fact that beef scrap or some similar feed is very essential during the winter months if a good supply of eggs is to be obtained. A convenient method of feeding beef scrap is in a mash made of three parts corn meal and one part each of wheat bran, wheat middlings and beef scrap. Skimmed milk or buttermilk may be used in place of the beef scrap, but if the supply is limited some scrap also should be fed.

In experiments conducted by the department it was found that for the first four months pullets fed a ration containing beef scrap produced, on an average, 41.5 eggs, while those fed the same ration without the scrap produced only 18.7. The cost of feeding the latter birds was 2.2 cents higher for every dozen eggs produced than in the case of the pullets fed beef scrap.

The birds should have plenty to eat, but they also should always be eager for each meal. If one-third of the scratch grain furnished them is fed in the morning and two-thirds at night, the birds will take more exercise than if they receive all the grain they desire in the morning. Good scratch mixtures may be made of equal parts by weight of cracked corn, wheat and oats, or of two parts of cracked corn and one part each of wheat and oats.

Breed From Healthy Stock

Birds without health and vitality are worthless as breeders, and if such birds are used for breeding, you will be overtaken by failure and disappointment in a very short time. Breed for health if you wish to have and produce healthy chicks. Feed, house and manage for health if you would keep your stock healthy. The breeding stock is the foundation of your poultry business, the life of your undertaking and the source of the eggs from which you intend to produce chickens, you must have abundant constitutional vigor in the breeding stock to get vitality in the chicks.

Eggs from healthy, sound, well-fed parent stock will hatch strong, sturdy chicks, full of vitality. Chicks from such stock are not subject to chicken ailments and do not become victims of "white diarrhea." Eggs from breeding stock that is out of condition, either from abuse of inbreeding, unsanitary surroundings, improper food, sickness or other causes, will never produce chicks that are worth the trouble it takes to hatch and rear them. When chicks die in the shell, are slow to hatch, or die off in large numbers within ten days after hatching, don't lay the trouble all to faulty incubation; investigate the breeding stock. With good eggs, incubation may be, and often is, at fault; but in many cases the eggs are not good and the breeding stock is all wrong. Errors of incubation may have been the cause, but it is quite possible that the exceptional hatch was simply an indication that nature was trying to provide against extinction, because of lack of constitutional vigor in the breeding stock. Abuse sometimes results in remarkable "provisional fecundity," though the efforts of nature may be futile.

In order to maintain healthy birds free from disease it is essential to keep a careful watch over the flock, and to determine in the beginning any abnormal condition which may appear. A loss of appetite, digestive disorders, as measured by diarrhea, eye or throat trouble, or any suspicious condition should be immediately noted, the trouble determined and immediate measures taken to check its spread. In a normal healthy flock the removal of the cause will usually be sufficient. If, however, the trouble seems infectious and the weather of such a nature that it exaggerates the trouble, as is often the case with roup and eye colds, a method of flock treatment should be practiced to cure it.

If a diagnosis determines the presence of a serious contagious condition, all the infected birds should be immediately removed and the quarters thoroughly disinfected. In such cases it is usually best to kill and burn all affected birds.

Clean birds are those which are free from body parasites. Lice and mites sap the vitality of the bird, lowering its normal resistance to disease and making it more susceptible to infection. Loss of appetite, loss of weight and a material reduction of production is bound to be the result of failure to keep the birds free from these minute organisms. In the case of both lice and mites prevention is much easier than eradication. The body lice are characteristic minute yellow animals which are found under the wings and about the vent in all fowls and are persistent little fellows.

With red mites another different method of prevention and attack must be followed. The mites are blood-sucking insects which reside in the cracks and crevices about the perches and dropping boards in the daytime and at night they flock onto the bodies of the birds while they are on the perches. In the morning, after they have filled up on blood, they return to their hiding places. The most satisfactory method is to spray the perches and roosting quarters with a solution composed of three parts of kerosene to one part of cresol.
